

Rozine Business Requirements Specification

Proposed revision 1.1 for stakeholder review

This proposed revision brings the July 2026 BRS together with subsequent product decisions and repository changes. It preserves all 205 original requirement identifiers, amends affected requirements at their point of use, and adds the detail needed to build and accept the revised product. The main changes concern investor fees and cart checkout, business affordability and fees, audit review, servicing, identity, privacy and implementation assurance. Approval of this document and verification of the relevant release gates are required before it becomes the governing baseline.

Document control	Value
Version	1.1 proposed revision
Status	For stakeholder review and formal baseline approval
Baseline	Rozine BRS v1.0 July 2026
Evidence as of	1 October 2026 at 07:51 UTC
Audience	Business owners, Product, Engineering, Operations, Finance and Legal
Owner	Rozine Technologies Ltd Product
Classification	Confidential

Revision overview

The proposed requirements below are for review by business and engineering stakeholders. A recorded product decision determines the intended behavior; it does not prove that the behavior is merged, deployed, lawful to activate or accepted in production.

Reading the status labels

- **Retained baseline** means the July BRS requirement remains in scope. It is not a claim of delivery.
- **Agreed policy** means an explicit business-owner direction has been found. The revised contract, implementation and applicable legal approval may still be outstanding.
- **Merged development** means code is present on the reviewed development branch. It is not production acceptance.
- **Unmerged candidate** means code or a contract change remains in an open pull request.
- **Unresolved** means a value, conflict, approval or supporting fact still requires a decision. It must not be silently filled by a prototype default.

Every MUST in this proposed revision describes the acceptance target after approval. Where it conflicts with the currently adopted engineering contract, the conflict remains gated until jointly adopted. The revised document itself does not activate a policy or establish regulatory authorisation.

Changes requiring review

Area	July baseline	Proposed revision	Status
Investor earnings	1% of each payout	Plus fee on earnings only; five active-capital bands; lock at checkout	Agreed policy
Business service fee	2% of each repayment	Deduct 2% of gross raised principal once at disbursement	Agreed policy
Application fee	Fixed amount on listing unspecified	MVP zero; post-MVP RWF 50,000 once after audit approval	Agreed policy
Checkout	One-note investment capability	Multi-note cart; post-cart tier; all-or-nothing commitment; no arbitrary cancellation	Agreed policy
Exposure limits	Category limits configurable	50% per investor per raise; no additional product category caps	Agreed policy
Business eligibility	Minimum history unspecified; DSCR 1.00 and 1.25 bands	RWF 30M annual revenue; 36 months first raise and 12 repeat; target 1.50 and floor 1.25	Agreed policy
Monthly evidence	Upload and co-sign within 1st to 7th	Prepare from 20th; on-site CPA audit; business review for 24 hours; disputes stop publication	Part merged; remainder policy
Identity	TIN prohibited	TIN requested for business and institution identity; tax integration remains excluded	Amendment required
Servicing	Fixed schedule; detailed collection policy open	Due-date debit; seven retries; late ladder; default on day 31	Mixed implementation and policy
Secondary trading	Peer-to-peer; 3% seller fee	MVP release candidate includes peer-to-peer; 0.5% taker and 0.2% maker proposed	Fee mapping and delivery open

Area	July baseline	Proposed revision	Status
Legal documents	General disclosure and consent duties	Exact version and hash; English MVP text; revised fees and privacy facts	Version and release gates open
Privacy and recovery	Compliant residency; geographically separated backups	Disclose actual Germany hosting and US email processing; resolve authorisation and backup gap	Unresolved release gates

Unchanged July requirements remain full-product targets. More specific revised paragraphs in this proposal identify intended changes; they are not evidence that the existing contract has already been changed. A reader must use the source and status note for each amendment before making an implementation or release decision.

1 Purpose scope and approach

The full product scope still includes all five applications and the shared core. The current delivery plan prioritises a four-role responsive web/PWA product and launcher; native clients and Pulse have been placed in later phases in that plan. Phase placement must not be treated as removal of baseline requirements. Later owner decisions explicitly put Plus fee tiering, cart checkout, institutional sign-up, withdrawal limits and automatic repayment collection into MVP scope. Auto-Deploy remains post-MVP. Peer-to-peer secondary trading remains full-product scope. The approved D-60 decision makes it mandatory for the MVP release candidate. Later engineering issue text describing it as post-MVP conflicts with that approval and is not evidence of an authorised removal. The interface must not promise a market that is unavailable.

Sources [PO](#) [P5](#) [L1](#)

1 1 Purpose

This proposed revision specifies the intended platform requirements for stakeholder review. The existing approved baseline remains the reference until this revision and affected contract amendments are formally adopted. Product policy, implementation status and release authorisation are recorded separately so that an agreed change cannot be mistaken for delivered or legally approved functionality.

1 2 In scope

- All five applications: Investor, Business, Auditor, Admin console, Pulse.
- The shared transactional core: entity model, lifecycle state machines, ledger, policy engine, event propagation.
- Underwriting, pricing, rating, verification, monthly reporting, servicing, collections and recovery.
- Primary issuance and secondary-market trading.
- Wallet, payments, treasury and fee collection.
- KYC/KYB, AML, disclosure, governance and supervisory reporting.
- The Audit Partner lifecycle from accreditation to compensation.

1 3 Out of scope

- Any tax-authority integration or tax-derived verification (deprecated — see change notice above).
- Deposit-taking, principal lending from Rozine's balance sheet, or guarantee of investor capital.
- Foreign-currency instruments and cross-border settlement in v1.
- Equity instruments, convertible instruments and revenue-share instruments other than the fixed-return note.
- Insurance products and credit guarantees (may be partnered, not built).

1 4 Requirement notation

PREFIX	CLASS	MEANING
BO-n	Business objective	The outcome the platform exists to produce.
BR-n	Business rule	An invariant the system must never violate.
FR-n	Functional requirement	A capability the system must provide.
DR-n	Data requirement	Data that must be captured, derived or retained.

PREFIX	CLASS	MEANING
NFR-n	Non-functional requirement	A quality attribute or operational constraint.
IR-n	Integration requirement	An external system dependency.
CR-n	Compliance requirement	A regulatory or legal obligation.
AC-n	Acceptance criterion	The condition under which delivery is accepted.

MUST denotes a mandatory requirement. SHOULD denotes a strong recommendation that may be deferred with documented justification. MAY denotes an option.

1.5 Approval and release boundary

BR-90 Product, engineering and relevant professional owners MUST reconcile each revised policy with the adopted contract, versioned configuration, user-facing calculations, legal text and tests before activation. A merged user interface alone does not satisfy the policy.

BR-91 Release records MUST distinguish a demonstrable prototype, an accepted pre-production release candidate and authorised live operation. Production acceptance requires the relevant provider, security, operational and regulatory evidence; submission of a sandbox application is not permission to handle live investments.

Sources [PO](#) [CO](#) [L1](#) [L2](#)

BR-104 The MVP release candidate MUST include peer-to-peer secondary settlement under the approved D-60 scope. It cannot be deferred solely to meet a schedule target without an explicit revised product decision. An unavailable market must not be advertised as live. Source [Current plan D-60](#)

2 Business objectives

BO-1 Enable profitable, asset-light Rwandan businesses to raise growth capital without collateral. Capital deployed; number of distinct businesses funded; median days from application to funded.

BO-2 Give retail investors a comprehensible, verified, fixed- return instrument accessible from RWF 5,000. Registered investors; median first-ticket size; reinvestment rate at maturity.

BO-3 Make monthly verification of small-business performance cheap, rigorous and routine. Cost per verified report; report SLA compliance rate; parsing accuracy against auditor ground truth.

BO-4 Never permit a business to borrow beyond its verified debt- service capacity. Zero notes originated above computed capacity; portfolio at risk by cohort.

BO-5 Provide pre-maturity liquidity to investors through a functioning secondary market. Secondary volume; median time-to-fill; spread to par.

BO-6 Operate to a supervisory standard from day one, sufficient to enter and exit the RCMA sandbox successfully. Sandbox admission; zero material findings; licence granted.

BO-7 Earn only from the approved platform services, never from principal risk or a hidden spread. Measure revenue by the adopted fee lines and keep collected late penalties allocated to investors rather than platform income.

Revision status: baseline objective refined for agreed commercial model. Sources [L2 Late-fee decision](#)

BO-8 Build a durable, disciplinable Audit Partner profession with aligned economics. Accredited partners; partner retention; yield-share paid; disciplinary incidence.

3 Actors roles and permissions

The original matrix below remains the general role reference. The specific current authority and two-person disbursement controls in FR-423–426 are narrower and govern that operation; a generic Superadmin role does not bypass them.

3 1 Primary actors

ACTOR	APP	RESPONSIBILITY
Investor	Investor	Funds notes, holds positions, receives repayments and verified monthly reports, trades on the secondary market.
Business owner	Business	Applies, uploads statements, accepts capacity, creates and manages a raise, submits monthly reports, repays.
Audit Partner	Auditor	ICPAR-accredited CPA. Performs on-site verification, captures evidence, co-signs reports, earns yield share.
Rozine staff	Admin	Underwriting, compliance, treasury, dispatch, partner accreditation, policy, dispute resolution.
Prospect	Pulse	Pre-launch investor pledging or business pre-qualifying. Holds no account and transacts no funds.
Supervisor	Admin (read-only)	Regulator or auditor granted a read-only seat over the live operating state.

3 2 Staff roles and permission matrix

CAPABILITY	ANALYST	APPROVER	TREASURY	COMPLIANCE	SUPERADMIN
View all directories and records	Yes	Yes	Yes	Yes	Yes
Approve/decline an application	No	Yes	No	No	Yes
Override computed capacity	No	No	No	No	Yes
Verify ICPAR licence, accredit partner	No	Yes	No	Yes	Yes
Freeze/unfreeze a party	No	No	No	Yes	Yes
Freeze/release Audit Partner yield	No	Yes	Yes	Yes	Yes

CAPABILITY	ANALYST	APPROVER	TREASURY	COMPLIANCE	SUPERADMIN
Post manual ledger entry/ reversal	No	No	Yes	No	Yes
Halt or resume the secondary market	No	No	Yes	Yes	Yes
Amend underwriting or fee policy	No	No	No	No	Yes
Toggle app feature flags/ maintenance	No	No	No	No	Yes
Manage staff accounts and roles	No	No	No	No	Yes
Act-as (view a user's live app state)	Yes	Yes	No	Yes	Yes
Broadcast to users	No	Yes	No	Yes	Yes

BR-1 Every administrative action **MUST** be gated by the actor's role. An ungated action is a defect.

BR-2 Every administrative action **MUST** write an immutable audit entry recording actor, target, action, stated reason and timestamp. Reason is mandatory and non-empty.

BR-3 Destructive or financially material actions (freeze, reversal, capacity override, yield release, market halt, policy amendment) **MUST** require explicit confirmation and support dual approval where policy requires it.

BR-4 Act-as **MUST** be read-only, visibly indicated, time-boxed and logged as a distinct event class.

BR-5 No role, including Superadmin, **MAY** delete an audit entry or a ledger entry.

3 3 Revised identity and business authority

FR-114 Investor sign-up **MUST** distinguish an individual from an institution. The institutional MVP record **MUST** capture official company name, TIN, and the representative's full name and address. Company checks are required before an institution may invest; the exact evidence and verification procedure remains to be specified. This classification **MUST NOT** imply a separately approved High-Net-Worth experience or additional product cap.

BR-92 The system **MUST** distinguish authority over bank-account onboarding from authority over monthly evidence. Two authorised bank signatories are required at corporate onboarding; one authorised business signatory can accept or dispute a monthly audit.

Sources [P1](#) [P2](#) [L1](#) [L2](#)

3 4 Role and signing authority

FR-608 A marketplace user **MUST** explicitly select an authorised active role. Selection persists appropriately across reloads, while changed membership, verification or session state forces a fresh authority check and clears stale private data. Opening a role page does not itself select that role.

FR-609 Return-to-position **MUST** restore only an authorised page and validated navigation parameters for that role. It **MUST NOT** persist private financial/evidence data, secrets or an arbitrary redirect target. When authority is lost, return to a permitted home or login state.

BR-102 Privileged staff access MUST remain separate from marketplace roles and depend on current scoped permissions and effective MFA. A Superadmin label alone does not grant treasury approval or override the two-person disbursement rule.

BR-103 A typed signature name MUST NOT create legal identity or authority. Each required canonical signatory MUST authenticate under a current verified entity mandate and accept the same quote, legal release and mandate. A sole trader may use a verified owner/mandate route without an invented company registration or registry badge.

Sources [N1](#) [N2](#) [N3](#) [N19](#)

BR-105 Proposed identity-policy clarification: an individual may hold both Investor and Business memberships, while Auditor membership is exclusive. Membership changes must be explicit and versioned; conflicting grants or silent reactivation are rejected. This rule is implemented in reviewed development code and requires explicit inclusion in the approved BRS. Source [Development membership transitions](#)

4 Domain model and data requirements

4.1 Core entities

ENTITY	KEY ATTRIBUTES
Party	Party ID, kind (business/investor/auditor/staff/platform), legal name, KYC-KYB state, verification tier, frozen flag, contact, district and province, created-at.
Business profile	Registration number, sector, premises geolocation, owner identity, bank and MoMo accounts on file, statement history, derived cash-flow series, capacity, rating, health status, standing.
Auditor profile	ICPAR member ID, practising certificate number, licence expiry, accreditation state, office geolocation, active engagement count and cap, performance rating, yield-frozen flag.
Application	Application ID, business, requested tenor, computed capacity, DSCR, tier, decision, decision reason, underwriter, timestamps.
Note	Note ID, issuer, title, state, target amount, raised amount, tenor months, total return rate, rating at issue, unit price, units outstanding, listing date, expiry date, maturity date, assigned Audit Partner.
Holding	Investor, note, units, cost basis, accrued return, payouts received, acquisition channel (primary/secondary).
Monthly report	Report ID, note, business, Audit Partner, reporting period, state, statement document reference, parsed gross inflow and outflow, liquidity coverage, health status, business note and photographs, auditor note and geo-tagged photographs, verification seal hash, submission and co-signature timestamps.
Order	Order ID, note, seller, units, ask price, state, matched buyer, settlement reference.
Ledger entry	Entry ID, kind, debit party, credit party, amount, currency, reference, reversal-of, immutable timestamp.
Repayment schedule	Note, instalment number, due date, principal component, return component, fee components, state, paid-at.
Dispute	Dispute ID, report, raising party, respondent, reason, state, resolving staff, resolution note.

ENTITY	KEY ATTRIBUTES
Policy	Path, value, version, amended-by, amended-at, prior value.
Audit action	Action ID, staff actor, target type and ID, action performed, reason note, timestamp.
Notification	Recipient, class, subject, body, related entity, read state, delivery channels.
Pulse registration	Side (investor/business), name, contact method and value, province and district, pledge amount or pre-qualified amount, sequence number, created-at.

4 2 Data requirements

DR-1 All monetary amounts **MUST** be stored as exact decimal values in Rwandan francs. Floating-point representation of money is prohibited.

DR-2 Every balance **MUST** be derived from immutable ledger entries. No stored balance field **MAY** be mutated directly.

DR-3 Every uploaded statement **MUST** be retained in original form alongside its parsed derivation, with both linked to the report or application that used them.

DR-4 Every evidence photograph **MUST** retain capture timestamp, device-reported geolocation and capture method (in-app camera only).

DR-5 Every underwriting decision **MUST** retain its complete input set, so the decision can be recomputed and explained years later.

DR-6 Policy values **MUST** be versioned. A decision **MUST** record which policy version governed it.

DR-7 Personal data **MUST** be classified, access-controlled and retained per the retention schedule; deletion requests **MUST** be honoured except where records are required by law or regulation.

DR-8 The proposed identity amendment permits TIN only for the explicitly approved business or institutional entity-identification purpose. Tax-authority credentials, EBM identifiers, tax-data verification and tax-compliance badges remain prohibited. Field scope, retention, visibility and migration **MUST** be approved in the formal amendment before relaxing the current blanket TIN prohibition.

Revision status: agreed identity direction; formal amendment required. Sources [P1](#) [P2](#) [L2](#) [CO](#)

4 3 Additional records for the revised journeys

DR-9 A checkout record **MUST** retain investor, each cart allocation, gross principal, post-cart active capital, tier band, locked fee rate, gross return, fee on earnings, net return, policy version, confirmation time and idempotency reference. Later tier changes **MUST NOT** rewrite the locked fee on an existing investment.

DR-10 Active capital used for tier qualification **MUST** be distinguishable from lifetime invested capital, wallet cash and earned return. Its inclusion and reduction rules **MUST** be versioned and reconciled across checkout, cancellation, repayment and secondary transfers.

DR-11 Every accepted legal document **MUST** retain the exact version identifier, text hash, language, accepting party, acting representative where applicable, timestamp and applicable transaction or onboarding record. Text changes **MUST** create a new version rather than silently reusing an identifier.

DR-12 A monthly report **MUST** retain when the sealed report became available to the business, its review deadline, signature or auto-approval outcome, dispute proof, pause time, CPA response, staff resolution and any linked amendment. The original seal and report **MUST** remain immutable.

DR-13 Collection records **MUST** distinguish principal, contractual return, fees, assessed penalties, recovered penalties, unapplied payments and refunds. Each provider attempt and callback **MUST** have correlation and idempotency data.

DR-14 An institutional record **MUST** link the legal entity and its named representative without treating them as the same Party. Access and consent **MUST** be attributable to the representative and the entity they act for.

Sources [P5](#) [P7](#) [L1](#) [L2](#) [P2](#) [P3](#) [P4](#) [I96](#)

DR-15 Money displays **MUST** distinguish spendable available balance, held funds, unissued commitments and issued holdings. Pending or unknown deposits are excluded from credited wallet totals. An original deposit-intent receipt remains immutable; later verified credit creates a separate correlated receipt.

DR-16 The system **MUST** retain the exact committed principal and contractual earnings rights assigned at reservation, confirmation and issue. Issue adds authenticated dates without recomputing a different rounding allocation.

DR-17 Public and investor-safe data **MUST** be a deliberate allowlist. A missing source is unavailable, not zero, approved, unrestricted or a fabricated balance. Business funding summaries **MUST** not expose investor names, identities, individual allocations or provider references.

Sources [N9](#) [N10](#) [N11](#) [N14](#)

5 Lifecycles

5 1 Note lifecycle

STATE	ENTERED WHEN	PERMITTED TRANSITIONS
Draft	Business begins a raise.	→ Submitted, → Withdrawn
Submitted	Business submits for underwriting.	→ Audit, → Declined
Audit	Underwriting cleared; awaiting Audit Partner co-signature.	→ Approved, → Declined
Approved	Co-signed and cleared for listing.	→ Live
Live	Published and accepting investment.	→ Funded, → Expired, → Withdrawn
Funded	Committed principal is durably retained and awaits authorised reconciled disbursement and issue.	→ Repaying
Repaying	Schedule active.	→ Matured, → Arrears
Arrears	A scheduled instalment is unpaid past grace.	→ Repaying, → Default
Matured	All instalments settled.	Terminal
Default	The adopted day-31 delinquency condition is met; recovery initiation is separately recorded.	→ Recovered, → Written off
Expired	Listing validity elapsed without full funding.	Terminal; committed funds returned

5 2 Monthly report lifecycle

STATE	DESCRIPTION
Drafting	Reporting window open; business preparing upload.
Submitted	Business has uploaded the statement, note and photographs. Dispatch triggered.
Pending audit	Assigned to an Audit Partner; on-site visit outstanding.
Co-signed	Partner has completed procedures and sealed evidence; new monthly reports then enter the delivered 24-hour Business review.
Published	Investor-safe published view available to authorised holders after valid approval or applicable auto-approval. Immutable thereafter.
Disputed	Business has raised a formal dispute; assigned CPA reviews first, with staff escalation or resolution as required. Timeout publication is paused.
SLA breached	Applicable reporting SLA is breached. A disputed 24-hour business review is not automatically overdue; the CPA deadline must be reconciled.

5 3 Audit Partner lifecycle

Pending verification → ICPAR licence checked → engagement terms signed in-app → biometrics bound → Active → (Suspended / Yield-frozen) → Reinstated or Terminated. Licence expiry MUST automatically suspend dispatch eligibility.

5 4 Business review and dispute flow

The monthly evidence sequence is preparation notice, on-site CPA work, sealed report delivered to the business, then the business review window. An explicit approval publishes the report. An undisputed timeout publishes it with the auto-approval outcome recorded. A dispute enters Dispute Under Review and suspends timeout publication. The CPA reviews the proof first and either amends the report or upholds the finding. Rejection or failure to amend escalates to Rozine staff. An amended report starts a fresh review window; the original is never overwritten.

FR-313 Submission of a formal dispute MUST pause the 24-hour auto-approval mechanism immediately. A background expiry task MUST recheck dispute state before publishing so that a concurrent timeout cannot bypass the dispute.

FR-314 A replacement sealed report MUST remain linked to the superseded report and open a fresh 24-hour review. The amended values, audit trail and investor-visible version MUST be consistent.

Sources [P2](#) [P3](#) [P4](#)

5 5 Funding and distress exceptions

BR-93 Confirmed cart checkout is final for the investor during an active campaign. Refunds are permitted when the whole campaign fails or is cancelled under approved lifecycle rules, not as arbitrary post-checkout investor withdrawal. A refund MUST use compensating money records and update campaign and tier state consistently.

BR-94 The proposed servicing policy enters Default at day 31 of delinquency. Day-30 legal recovery initiation and day-31 default classification MUST be separate attributable events. Neither event proves recovery or receipt of penalty income.

Sources [P7](#) [P1](#) [L1](#)

5 6 Origination and money state refinement

FR-610 Final required-signatory acceptance MUST atomically reserve business exposure using current limits. Staff review verifies that retained acceptance and exposure; it cannot manufacture consent or bypass a failed credit gate. Publication reuses the reservation exactly once. Changed quote or terms return to Review rather than silently carrying forward signatures.

FR-611 Reserve exact units before final confirmation. The reservation expires at the earlier of five minutes or campaign cutoff. A first confirmation at or after expiry MUST refuse and return held money once; replay of an already completed confirmation retains the original outcome. New disclosed price, fee or policy requires a new review and acknowledgement even if cheaper.

FR-612 The platform MUST label a pre-issue investment as a commitment awaiting issue, with no contractual maturity date. Only verified and reconciled successful disbursement may issue holdings and anchor schedule dates to the authenticated Kigali effective disbursement date, using approved month-end rules.

FR-613 Campaign progress MUST reconcile committed, live-reserved, available and unavailable units to total units. One hundred percent committed is not funded or disbursed. Expired or returned unit claims remain unavailable until safely recycled; a refund does not itself prove immediate resale availability.

FR-614 Campaign cutoff is 30 days after publication and cannot be extended by reads or retries. Partial expired campaigns close once with evidenced cash return and exposure release; a fully committed campaign may await funding settlement. A zero-commitment closure MUST say that nothing required refund rather than claiming money was returned.

Sources [N5](#) [N9](#) [N11](#) [N12](#) [N13](#) [N22](#)

6 Business rules

6 1 Underwriting and capacity

BR-10 Capacity MUST be computed from verified cash flow and current obligations. The application may capture a requested target for affordability evaluation, but this is not an entitlement. The engine MUST preserve the original request, maximum offered amount and selected principal distinctly. The business may accept only a newly evaluated offer at or below current capacity, with its exact schedule.

Revision status: agreed technical contract refinement. Sources [N2](#) [N3](#)

BR-11 A note MUST NOT be listed for more than the issuer's computed capacity at the time of listing.

BR-12 Capacity MUST account for existing Rozine obligations and any disclosed external debt service.

BR-13 Capacity computation MUST use a volatility-trimmed measure of net operating cash flow so that a single exceptional month cannot inflate the offer.

BR-14 The proposed affordability policy uses a target DSCR of 1.50× and a hard original-request cutoff of 1.25×. An original or special request below 1.25× MUST be rejected. Where permitted, an eligible original request may be scaled down to an offer that meets 1.50×; accepting less requires a new evaluation and explicit schedule acceptance. No silent resizing may bypass failure of the original request.

Revision status: agreed policy and technical contract; activation gated. Sources [P1](#) [N2](#) [N3](#) [CO](#)

BR-15 A first-time raise MUST provide 36 complete consecutive verified months. A qualified repeat raise may use 12 only after passing the original baseline, settling an earlier note fully and on time, auditing any intervening gap, and retaining the required automatic-collection mandate. The latest complete evidence month is valid through day 45; day 46 blocks fresh evaluation or an unsigned quote. The proposed minimum annual revenue is RWF 30,000,000; its annual measurement period remains to be defined.

Revision status: agreed policy and contract. Sources [P1](#) [N2](#) [N4](#)

BR-16 A declined business MUST retain its profile, continue to be re-scored as new statements arrive, and be re-eligible automatically without reapplying from zero.

BR-17 Any permitted adjustment of computed capacity MUST be restricted to the authorised Superadmin function, have a stated reason and retained basis, and be visible on the note permanently. It MUST NOT bypass failed current credit, evidence, exposure or mandate gates, manufacture business consent, or offer an amount above the newly verified capacity. The permitted adjustment procedure remains to be specified.

Revision status: baseline control narrowed to preserve mandatory gates. Sources [B0](#) [N5](#)

6 2 Pricing and terms

BR-20 Permitted tenors are exactly 3, 6, 9 and 12 months. No other tenor MAY be offered.

Observed discrepancy: reviewed development code currently permits 3, 4, 5 and 6 months. That code does not by itself supersede this retained baseline. Section 12 2 records the required product and risk reconciliation. Source [Current pricing code](#)

BR-21 Return MUST be expressed as a flat total return on principal, not as an annualised rate. The term "APR" MUST NOT appear in any user-facing surface.

BR-22 Total return MUST be at least 10% and at most 15% of principal, on every note, at every tenor, without exception.

BR-23 Total return MUST be a function of rating and tenor within those bounds, and MUST be deterministic and explainable.

BR-24 Repayment MUST be in fixed monthly instalments comprising principal and return, known in full at the time of investment.

BR-25 Early repayment MUST NOT reduce the total return owed to investors.

BR-26 The business MUST see the total cost of capital in francs, and the investor MUST see the total amount returned in francs, before committing.

BR-27 Minimum investment is RWF 5,000. Units MUST be priced so that this minimum is always achievable.

BR-95 The RWF 5,000 minimum investment remains unchanged. A checkout MUST also ensure that existing and proposed exposure by that investor does not exceed 50% of the same raise target. Multiple cart lines or repeat requests MUST NOT evade this limit.

Sources [P2](#) [L1](#)

BR-28 A campaign cutoff MUST be 30 days after publication. A campaign that is not fully committed at cutoff must close under the approved failed-campaign process and return committed investor cash in full without fee. A campaign fully committed before cutoff may await durable funding settlement; it MUST NOT be automatically refunded solely because reconciliation completes after the cutoff. Refund and exposure release require the corresponding verified evidence.

Revision status: agreed technical contract refinement. Sources [N22](#) [N13](#) [P7](#)

6.3 Rating

BR-30 The platform **MUST** publish exactly one measure of business quality. Any second competing score is prohibited.

BR-31 The rating **MUST** be expressed on a 0.0–5.0 scale with one decimal place, everywhere, in every app including Admin and Auditor.

BR-32 Bands **MUST** be: Strong ≥ 4.0 ; Stable ≥ 3.0 ; Weak ≥ 2.0 ; Distressed < 2.0 . Band boundaries **MUST** fall on whole numbers.

BR-33 Presentation **MUST** lead with the band word, support it with the numeric rating, and reinforce with the band colour.

BR-34 "Stable" **MUST** be presented as the healthy default, never as a warning state.

BR-35 A business rated Distressed **MUST NOT** be listable. Its existing notes enter active monitoring.

BR-36 The rating **MUST** be recomputed on every verified monthly report and on any material event.

BR-37 The rating at time of issue **MUST** be recorded immutably on the note; the live rating **MUST** also be shown to holders.

6.4 Verification and reporting

BR-40 No note **MAY** be listed without an Audit Partner co-signature on the originating verification.

BR-41 Monthly reporting **MUST** include a preparation notice between the 20th and month-end, an in-person CPA audit, delivery of the sealed report to the business app and a 24-hour business review window. One authorised business signatory may approve or dispute. A valid dispute pauses auto-approval; an undisputed report is automatically approved and published when its review window expires. This replaces the requirement that business co-signature always finish within the 1st–7th window.

Revision status: agreed policy; 24-hour contract flow reported merged. Sources [P2](#) [P3](#) [P4](#)

The 1st–7th baseline seal/SLA calendar is not silently erased by the new preparation notice. The precise current CPA completion deadline requires reconciliation. The 24-hour business review applies to new monthly seals; legacy and Flash rules retain their own policy. Sources [P2](#) [N8](#)

BR-42 A report **MUST NOT** be published without a valid verification seal from an accredited, unexpired Audit Partner.

BR-43 Evidence photographs **MUST** be captured through the in-app camera with live geolocation. Gallery upload **MUST** be rejected.

BR-44 Captured geolocation **MUST** be cross-checked against the registered premises; a material discrepancy **MUST** flag the report for review.

BR-45 A published report **MUST** be immutable. Corrections **MUST** be issued as an amendment linked to the original, never as an edit.

BR-46 An SLA breach **MUST** freeze the responsible Audit Partner's yield share pending Admin resolution, and **MUST** flag the note to holders.

BR-47 The business note and the auditor note are each limited to 100 characters; photographs are limited to five per party per report.

BR-48 Flash Audits **MUST** be randomly triggerable with a 24-hour completion requirement, and **MUST** be indistinguishable in advance from routine dispatch.

6 5 Audit Partner integrity

BR-50 Only a verified ICPAR member with a current practising certificate MAY be accredited or receive dispatch.

BR-51 Dispatch MUST be restricted to partners whose office is within 30 km of the business premises, subject to capacity.

BR-52 A partner MUST NOT exceed the configured concurrent-engagement cap.

BR-53 Assignments MUST rotate; a partner MUST NOT steward the same business indefinitely.

BR-54 A partner MUST NOT be assigned to a business with which a declared conflict of interest exists.

BR-55 Audit Partner compensation remains based on 25% of the collected attributable service fee, with monthly payability and SLA controls. Because the proposed service fee moves to a one-time disbursement deduction, the allocation, accrual and release basis MUST be reconciled and approved before the amended fee model is activated. No change to the 25% share is inferred.

Revision status: retained baseline share; revised accrual unresolved. Sources [B0](#) [L1](#)

BR-56 Licence expiry MUST automatically suspend dispatch eligibility without staff action.

6 6 Money and fees

BR-60 Investor funds MUST be held in segregated accounts and MUST NOT be commingled with Rozine operating funds at any time.

BR-61 Rozine MUST NOT take principal risk, guarantee capital, or represent any note as capital-protected.

BR-62 The proposed schedule is: application fee RWF 0 for MVP; post-MVP RWF 50,000 non-refundable application fee once after audit approval; business platform service fee 2% of gross principal once at disbursement after full funding; investor Plus fee on earnings only using the locked checkout tier; secondary fee 0.5% for the taker and 0.2% for the maker; and disclosed actual payment-provider withdrawal charges. A separate interest spread, fee on returned principal or monthly business service fee MUST NOT be added. This schedule requires joint contract adoption and revised legal text before activation.

Revision status: agreed policy; unmerged contract amendment. Sources [P1](#) [P5](#) [P6](#) [L1](#) [L2](#) [C0](#)

BR-63 The Audit Partner allocation MUST equal the approved 25% share of collected attributable service fees. The revised timing and liability treatment for the one-time disbursement fee MUST be formally decided; the platform MUST NOT silently retain monthly service-fee charging to fund this allocation.

Revision status: baseline share retained; accrual unresolved. Sources [B0](#) [L1](#)

BR-64 All fees MUST be disclosed in francs before the user commits to the action that incurs them.

BR-65 Every movement of value MUST produce balanced double-entry ledger records. Reversals MUST be posted as new compensating entries referencing the original.

BR-66 Disbursement MUST occur only after the note is fully funded and all conditions precedent are satisfied.

BR-67 Repayments MUST be allocated to holders pro rata to units held on the record date.

6 7 Secondary market

BR-70 Only fully settled holdings in notes that are Repaying and current MAY be listed for sale.

BR-71 Holdings in notes in Arrears, Default or Disputed status MUST NOT be tradable.

BR-72 The buyer MUST see the note's current rating, health status, latest published report and remaining schedule before purchase.

BR-73 Settlement **MUST** be atomic: units and funds transfer together or not at all.

BR-74 Admin **MUST** be able to halt the secondary market globally or per note, immediately.

BR-75 Rozine **MUST NOT** act as principal, market maker or price-setter on the secondary market.

6.8 Pulse

BR-80 Pulse **MUST NOT** collect funds, issue any instrument, or create any binding obligation on either party.

BR-81 Every Pulse surface **MUST** carry a clear non-binding demand-simulation disclosure.

BR-82 A pre-qualification figure **MUST** be computed by the same engine used in production, and **MUST** be labelled indicative and subject to full verification.

BR-83 Registrations **MUST** capture name, one contact method (phone or email), province and district, and **MUST** issue a sequence number.

BR-84 Pulse counters displayed publicly **MUST** reflect real registration activity, never fabricated figures.

6.9 Revised fee and capital rules

BR-96 Plus tier qualification **MUST** use currently active deployed capital, not lifetime investment volume. At cart checkout, qualification **MUST** include the cart's proposed commitments. The resulting rate applies to all allocations in that cart and is locked for the lifetime of each resulting investment.

BR-97 The fee **MUST** apply to the contractual earnings component only. Principal returned to the investor is excluded. The gross business rate **MUST** flow into the investor calculation without a separate hidden spread; net investor rate equals gross business rate multiplied by one minus the locked Plus fee rate.

Capital after cart commitment	Fee on earnings
Under RWF 1,000,000	15%
RWF 1,000,000 to below RWF 5,000,000	12%
RWF 5,000,000 to below RWF 25,000,000	10%
RWF 25,000,000 to below RWF 100,000,000	9%
RWF 100,000,000 or more	8%

The five thresholds and latest percentages supersede the earlier six-tier structure and earlier 10%, 8%, 6.5%, 5%, 4% table. The table pairs the latest five percentages, supplied in order on 30 September, with the five thresholds previously approved on 29 September. This reconciliation must be confirmed in the adopted policy; the owner did not restate the entire table in one message. Tier names must not create different entitlement rules.

BR-98 A fully funded business disbursement **MUST** deduct the 2% platform fee once from the gross principal. Interest and contractual principal obligations **MUST** continue to use the gross raised principal. The production application fee, when enabled, is collected once after audit approval and **MUST NOT** be deducted again from disbursement.

BR-99 The proposed late-payment ladder applies 5% at the due-date boundary, an additional 5% at day 7 and an additional 5% at day 30, capped at 15% per instalment. The base is overdue instalment principal plus contractual return, excluding prior penalties. Later steps use the remaining unpaid principal and contractual return after qualifying partial payments. Exact allocation order, rounding, cap base and race handling require the amended servicing policy and golden tests before activation.

BR-100 Investors MUST see accrued late charges separately with an explicit only-if-collected warning. One hundred percent of actually collected late fees is passed pro rata to affected investors with no platform fee. Assessment is not paid income or a guarantee. The precise own-share display and allocation implementation require the approved recovery policy.

BR-101 The platform MUST retain the no-principal-risk and peer-to-peer-only secondary rules. The proposed maker/taker commission changes the fee schedule; it does not authorise Rozine to buy notes, make markets, set transaction prices or promise immediate liquidity.

Late-fee distribution direction: 100% of actually collected late fees is to be passed pro rata to affected investors with no platform charge, distinct from contractual earnings and principal. Exact investor-view allocation and the conflict with the older annual principal-only penalty remain to be resolved. Source [Issue 99 recorded decision](#) and [Investor draft terms](#)

7 Functional requirements Investor app

FR-100 Onboarding Register, verify identity to the required KYC tier, accept terms and risk disclosure, and set up a wallet before any investment is permitted.

FR-101 Deal discovery Browse live notes as a card deck with filters by sector, tenor, rating band and yield, and a curated ordering.

FR-102 Verified investors MUST receive the permitted deal financial aggregates, rating and approved basis, funding state, tenor, gross return, their disclosed net economics, schedule, use of funds and factual audit summary. Private bank identifiers, debt detail, internal score components, full signed audit reports, exact premises location and raw evidence MUST remain restricted.

Revision status: agreed disclosure contract narrowing baseline access. Sources [N9](#) [N10](#)

FR-103 An authorised investor MUST be able to review the published investor-safe report summary and narrowly scoped verification facts for a held note. Photographs, where permitted, MUST be explicitly published sanitised derivatives with location and EXIF removed. Raw report files, original evidence links and precise geolocation MUST NOT be exposed through this view. If a safe view is unavailable, return an honest unavailable state.

Revision status: agreed disclosure contract narrowing baseline access. Sources [N9](#) [N10](#)

FR-104 Select RWF 5,000 units, obtain a current exact reservation and checkout disclosure, review gross principal, gross earnings, locked Plus fee and net earnings, and confirm. The revised MVP target includes multi-note cart checkout. Commitments remain awaiting issue until verified reconciled disbursement creates Holdings.

Revision status: agreed contract plus cart policy; delivery gated. Sources [N9](#) [N11](#) [L1](#) [L2](#)

FR-105 Watchlist&follow Save notes and follow businesses to be alerted to new raises.

FR-106 Portfolio View total value, invested principal, projected return, positions, upcoming payouts, diversification by sector, rating mix, and idle wallet balance.

FR-107 Holding detail Per position: schedule, payouts received and outstanding, current rating and health, arrears warnings, and the report history.

FR-108 Secondary market List a holding for sale at a chosen price, browse and purchase others' listings, and track order state to settlement.

FR-109 Wallet Deposit, withdraw, view balance and a complete transaction history with per-transaction detail.

FR-110 Notifications Receive and review alerts for new reports, payouts, funding milestones, arrears, disputes and platform notices.

FR-111 Education Access lessons and FAQs explaining the rating, the fixed-return structure, fees, risk and the secondary market.

FR-112 Profile Manage personal information, KYC documents, bank and MoMo details, security settings, notification preferences, statements and support.

FR-113 Present unavoidable plain-language capital-loss disclosure at first investment and on each deal. State that Rozine does not buy notes and that liquidity is not guaranteed. Do not describe a currently unavailable secondary market as an immediate exit option or imply that delayed repayment cannot become a loss.

Revision status: baseline retained and copy refined. Sources [P1](#) [I99](#)

7 1 Cart checkout and revised disclosures

FR-115 An investor MUST be able to add allocations to several eligible notes, review the cart, see the post-cart tier and inspect the gross return, fee on earnings and net return before confirmation. Ineligible or stale allocations MUST produce an actionable explanation.

FR-116 Cart commitment MUST be all-or-nothing across available investor funds, each note's remaining capacity, the 50% investor cap, the locked Plus rate and resulting ownership or reservation records. A partial cart purchase MUST NOT occur unless the user has explicitly reviewed and confirmed a revised cart.

FR-117 Concurrent, repeated or resumed checkout MUST produce one economic commitment for one confirmed request. Failure MUST leave no orphan commitment, funds lock, ownership or tier change. The receipt MUST identify every allocation and its locked terms.

FR-118 Portfolio and payout screens MUST distinguish gross contractual earnings, the locked earnings fee, net earnings and returned principal. A tier upgrade or downgrade after purchase MUST NOT restate the economics of an existing note.

FR-119 Withdrawal requests MUST enforce the proposed RWF 1,000 minimum and RWF 2,000,000 maximum per transaction, show actual provider charges before confirmation and expose processing status. Net amount received equals the requested withdrawal less the disclosed actual provider charge; no additional platform withdrawal fee is inferred. The agreed 1-24-hour service expectation MUST be reconciled with provider capability and failure handling before it is promised as an unconditional SLA.

FR-120 The MVP MUST support fee tiering. Auto-Deploy execution remains post-MVP; the interface MUST distinguish available manual investment and fee benefits from automation that is not yet enabled.

Sources [P5](#) [P7](#) [L1](#) [L2](#)

FR-121 Checkout MUST aggregate active reservations and commitments by canonical investor Party across accounts or sessions. It MUST also enforce current identity, funds, units, restrictions and self/connected-business exclusions. Missing independence evidence is not proof of independence.

FR-122 Realised earnings MUST come from credited payout evidence and be distinguished from projected earnings, returned principal and collected late fees. The client MUST not independently derive authoritative fees or substitute a cumulative historic figure for current spendable balance.

Sources [N5](#) [N11](#) [N14](#) [N23](#)

The all-or-nothing cart behavior in FR-116 is the proposed acceptance detail for the owner-approved basket requirement. The amended contract must ratify its full failure and retry semantics; existing single-note atomicity is not evidence that a multi-note cart is delivered. Sources [Owner cart decision](#) and [Open contract amendment](#)

8 Functional requirements Business app

FR-200 Register the business, capture entity registration and the proposed TIN identifier, owner identity, premises geolocation and contact, and complete KYB to the required tier. Two signatories are required for corporate bank-account onboarding; this rule does not require two signatures on a monthly audit report. The TIN amendment remains gated under DR-8.

Revision status: agreed policy. Sources [P1](#) [P2](#) [C0](#)

FR-201 Statement ingest Upload bank and MoMo statements as PDF. Accepted evidence types: MoMo statement, bank statement, audited cash transactions, POS data.

FR-202 Parsing feedback Show parsed inflow, outflow and derived series for confirmation, with the ability to flag a parsing error for review.

FR-203 Capacity&rating Display computed capacity, rating with band, indicative total return by tenor, and a plain-language explanation of each.

FR-204 Create a raise Choose an amount at or below capacity, choose a tenor from 3/6/9/12, state use of funds, attach photographs, and preview the exact total cost in francs and the monthly repayment.

FR-205 Submission&tracking Submit for underwriting and track state through audit, approval, listing, funding and disbursement, with reasons shown at every step.

FR-206 Support preparation from the 20th to month-end, submission of digital and physical-record readiness, the in-person CPA visit, and business review of the sealed report. Keep the baseline 100-character report-note and five-photo limits unless formally amended; a separate dispute permits text up to 1,000 characters and/or proof uploads.

Revision status: agreed policy; review flow partially merged. Sources [P2](#) [P3](#) [P4](#)

FR-207 Audit coordination See the assigned Audit Partner, expected visit, co-signature state, and any outstanding request from the partner.

FR-208 Repayments View the full schedule, pay an instalment, see fees applied, and receive arrears warnings before and after a due date.

FR-209 Standing&health See current rating, health status, reporting compliance history and the specific factors improving or damaging standing.

FR-210 Dispute Raise a dispute against a report or an audit finding, with reason and evidence, and track resolution.

FR-211 Wallet Receive disbursement, hold balance, withdraw to a registered bank or MoMo account, and view full transaction history.

FR-212 Education Access guidance on improving rating, managing cash flow, preparing for an audit visit, and understanding fees.

FR-213 Decline handling On decline, present the computed figures, the specific shortfall, and the concrete conditions under which the business would qualify.

8 1 Business fees affordability and repayments

FR-214 The application journey MUST distinguish eligibility, indicative capacity, audit approval, listing, full funding and disbursement. It MUST show the correct MVP application fee of zero and the proposed post-MVP fee trigger after audit approval.

FR-215 Before acceptance, the business MUST see gross principal raised, the 2% one-time deduction, net cash received, total contractual return and the complete repayment schedule. A fee already collected MUST NOT be deducted twice.

FR-216 Business eligibility MUST show a specific failure reason for the proposed revenue, statement-history and DSCR thresholds. The approved 10% net-margin metric MUST be surfaced as a credit-profile measure; it MUST NOT become an automatic rejection threshold without an explicit policy rule.

FR-217 Authorised automatic wallet collection MUST run at 23:59 CAT on the instalment due date and retry daily on days 1 through 7 when funds are insufficient. The schedule MUST use a defined Africa/Kigali business date and avoid duplicate collection under retries or delayed provider events.

FR-218 Partial payments MUST reduce the unpaid instalment components according to the approved allocation order. Early repayment remains allowed without a prepayment penalty or reduction of the total contractual return. The business MUST see remaining due amounts, assessed penalties, collection attempts and receipts separately.

Sources [P1](#) [P6](#) [L1](#) [L2](#)

FR-219 The Business application MUST be resumable through Business, Raise, Review and Submitted steps. Autosave and read navigation do not advance workflow. Signing is offered only for a valid Review. One unresolved submitted application per Business prevents duplicate use of the same exposure; submitted records are immutable.

FR-220 An unsigned Review crossing the first day of a Kigali month MUST be requoted when the schedule start changes, even if source evidence is still fresh. Existing signatures do not carry into the new quote; previously submitted historical snapshots remain unchanged.

FR-221 Business funding views MUST show aggregate money, unit buckets, distinct-investor count and truthful lifecycle state. They MUST NOT disclose individual investor identities or allocations, or label retained commitments as disbursed cash.

FR-222 Business and Investor wallets MUST remain separately owned, including for a sole trader. A business money action requires its own effective mandate; signing an application does not confer deposit, transfer or collection permission. The exact new business-deposit permission remains a reviewed design gate.

Sources [N2](#) [N3](#) [N4](#) [N9](#) [N12](#) [N13](#) [N15](#)

FR-223 Statement ingestion, extraction, transcription and Auditor verification MUST be separate attributable stages. Extracted figures remain unverified until the authorised verification procedure is complete; missing evidence cannot become zero cash flow. Corrections preserve original source and amendment lineage. Source [Development statement verification tests](#)

9 Functional requirements Auditor app

FR-300 Accreditation Register, submit ICPAR member ID and practising certificate, complete biometric binding, and await verification. Dispatch MUST be blocked until Active.

FR-301 Engagement signing Review and execute the master services agreement and ISRS 4400 agreed-upon-procedures terms inside the app, with a retained signed record.

FR-302 Job queue Receive dispatched jobs within the 30 km radius, with business detail, location, deadline and job type (routine or Flash Audit).

FR-303 Flash Audit timer Display a live 24-hour countdown for Flash Audits with escalating urgency and breach consequence stated.

FR-304 On-site capture Capture geo-tagged photographs through the in-app camera only. Gallery selection **MUST** be unavailable.

FR-305 Procedures checklist Work through the agreed-upon procedures as a structured checklist, recording findings against each.

FR-306 Statement verification Review the parsed figures against source documents and on-site observation; confirm, correct or reject with reason.

FR-307 Co-signature Apply the verification seal, binding auditor identity, licence, report contents and timestamp. Seal **MUST** be irreversible.

FR-308 Portfolio View all stewarded businesses, their reporting history, health and upcoming obligations.

FR-309 Earnings See yield share accrued, paid and frozen, per note and in total, with the basis of each calculation.

FR-310 Academy Complete continuing-education modules covering the platform's metrics, formulas, procedures and ethics, with completion recorded.

FR-311 Offline tolerance Complete a full field capture without connectivity and synchronise reliably when connectivity returns, without data loss.

FR-312 Conflict declaration Declare a conflict of interest and decline a job, with the declaration recorded and the job re-dispatched.

9 1 Operational refinements

FR-315 CPA dispatch **MUST** enforce a 30 km radius measured from the registered corporate office and at most three active jobs per CPA, alongside current accreditation, rotation and conflict rules.

FR-316 Unexplained audit variance **MUST** require explicit reconciliation or explanation before sealing. The proposed tolerance is zero, replacing the prototype percentage buffer; the implementation **MUST** distinguish legitimate rounding under the approved exact-money rules from an unexplained difference.

FR-317 The Auditor **MUST** see disputes on assigned reports, supporting files and text, the required response, amendment history and escalation state. Staff escalation **MUST** remain available where the CPA upholds the finding or fails to amend.

FR-318 Pending manual ICPAR verification **MUST** be shown honestly and **MUST** block actions that require active accreditation. Reusing a renewal screen does not confer accreditation or imply a live registry integration.

Sources [P1](#) [P3](#) [P4](#)

FR-319 Accreditation and renewal submissions do not confer current standing. Dispatch eligibility **MUST** also check the recorded ICPAR verification, current certificate, saved accepting-work preference, applicable 30-day standing-check freshness and independence. Turning availability on cannot bypass authority checks.

FR-320 A Flash Audit deadline **MUST** remain original dispatch time plus 24 hours through acceptance or reassignment. A routine job **MUST NOT** acquire an invented Flash deadline.

FR-321 A job offer gives no private evidence access. A blocking conflict or authority revocation **MUST** remove protected file, save and seal access immediately, including stale views. The partner must still be able to declare a conflict and see only the minimal permitted status or own receipt.

FR-322 Protected work **MUST** require acceptance of the current released full Auditor agreement and procedure version. A historical consent receipt cannot restore withdrawn current authority. Sealing requires fresh confirmed MFA bound to the report and content; synthetic capture or typed PIN input does not prove physical device attestation.

FR-323 Monthly disputes may include up to five PDF, JPEG or PNG files of at most 10 MiB each, and/or text up to 1,000 characters. Files remain private and downloads authorised. Staff may escalate an unacted case; no invented CPA deadline or business escalation action is implied.

FR-324 Auto-approval applies only to eligible new monthly seals under the amended policy, with a retained delivery time and current integrity/authority checks. It MUST NOT fabricate a human signature. Legacy seals preserve their governing policy and Flash Audits retain their explicit-signature behavior.

Sources [N6](#) [N7](#) [N8](#) [N20](#) [N21](#)

10 Functional requirements Admin console

The Admin console MUST provide complete visibility and command over every entity and action in the ecosystem. Any operation possible in the system MUST be observable and, where appropriate, reversible from Admin.

FR-400 Command dashboard Present live platform state: capital deployed, active notes, funding health, attention items requiring action, and quick commands.

FR-401 Business directory Search, filter and inspect every business; view rating, capacity, notes, reports, standing and full history; freeze, adjust KYB tier, or override capacity.

FR-402 Investor directory Search, filter and inspect every investor; view KYC state, wallet, holdings, orders and activity; freeze or adjust tier.

FR-403 Auditor network ICPAR verification desk for pending accreditations with licence detail and manual override; spatial dispatch map showing partner radius, capacity and load; reassign engagements; suspend, terminate or reinstate; freeze or release yield.

FR-404 Application queue Review submitted applications with full underwriting basis; approve, decline or return with reason; enforce tier rules.

FR-405 Note management Inspect any note across its entire lifecycle; force state transitions where legitimate, with reason and log.

FR-406 Monthly audit compliance Board of every report by state (Drafting, Pending audit, Published, SLA breached, Disputed); open any report in a detail panel with full evidence; escalate, reassign, freeze yield or resolve.

FR-407 Secondary market Monitor orders and settlement; halt or resume trading globally or per note; cancel an order with reason.

FR-408 Treasury&ledger View the full double-entry ledger; reconcile segregated accounts; post manual entries and reversals under dual approval; monitor fee revenue by line.

FR-409 Risk&distress Distressed-note board with outstanding amount, days late, risk band and probability of default; open a review panel with the why-flagged basis, recommended action and one-click execution.

FR-410 Compliance Case management for AML alerts and investigations; document review; freeze powers; suspicious-activity recording.

FR-411 Policy engine Amend every configurable parameter—DSCR thresholds, tenor set, return floor and ceiling, fee rates, yield share, dispatch radius, concurrency caps, SLA windows, exposure limits—with versioning and attribution.

FR-412 App control Per-app feature flags, maintenance mode and forced-update controls for Investor, Business, Auditor and Pulse.

FR-413 Staff&roles Create, modify and disable staff accounts; assign roles; review each role's permission set.

FR-414 Audit trail Complete, immutable, searchable record of every administrative action with actor, target, action, reason and timestamp.

FR-415 View a user's permitted application state read-only under explicit staff authority, clearly indicated and logged. Marketplace role membership or email identity alone does not grant privileged Admin access or company mandate.

Revision status: agreed authority contract refinement. Sources [N1](#)

FR-416 Messaging Broadcast to a targeted audience across apps; manage templates and automated notification rules.

FR-417 Disputes Intake, investigate and resolve disputes between businesses and Audit Partners, with the outcome recorded on the report.

FR-418 Supervisory reporting Generate and export the reports required by the regulator, and support a read-only supervisor seat.

10 1 Controls for the revised policies

FR-419 Admin MUST distinguish approved active configuration from draft policy values and unmerged amendments. The view MUST show owner, version, activation time, affected decisions and rollback or compensating-action procedure.

FR-420 Admin MUST be able to inspect one cart across its allocations, locked terms, funds movement, ownership, refunds and audit events. Review of a failed campaign MUST reconcile investor refunds and the resulting active-capital position.

FR-421 Admin MUST review overdue instalments, daily collection attempts, partial payments, each penalty step, day-30 recovery initiation and day-31 default separately. Manual exceptions MUST use the existing role, reason and dual-control rules.

FR-422 Legal document administration MUST expose exact text, version and hash and prevent a materially changed text from reusing the same version identifier. Release review MUST compare the adopted document to the effective policy and product behavior.

Sources [P0](#) [P7](#) [L1](#) [L2](#) [I96](#)

FR-423 Disbursement MUST require two distinct currently authorised staff identities and effective MFA at every amount, with no same-person, threshold or Superadmin bypass. Treasury authorises, an Approver checks, Compliance may hold, and a Superadmin-only account has view access. Each approval binds the exact amount, immutable verified destination and current record revision. A hold may be released only by a different authorised Approver from the person who placed it; releasing a hold neither approves the disbursement nor sends payment.

FR-424 Before sending, the system MUST recheck required credit, evidence, exposure, mandate, restrictions and staff authority. Missing source data or revoked authority is an unavailable or blocked decision, not an evidenced financial failure authorising a refund.

FR-425 A durable disbursement intent MUST precede transmission. Requery and scheduled reconciliation observe the same operation without resending it. An authenticated final observation needs exact reconciliation before settlement; unknown or conflicting outcomes remain blocked and cannot issue holdings or trigger a speculative refund.

FR-426 Verified reconciled success MUST issue once; an authorised factual pre-send failure or reconciled final failure closes with full fee-free refunds. Issue and refund are mutually exclusive. Later revocation of staff authority does not erase the duty to settle an already-sent, verified money outcome.

Sources [N16](#) [N17](#) [N24](#)

11 Functional requirements Pulse and shared core

11 1 Pulse

FR-500 Investor pledge Set an intended amount, see the projected total return, register name, contact method, province and district, and receive a sequence number.

FR-501 Business pre- qualification Upload one statement and receive a real computed pre-qualified amount, rating and indicative yield, produced by the production engine.

FR-502 Shareable pass Issue a downloadable and shareable pass carrying the registrant's name, figure and sequence number, for organic distribution.

FR-503 Live counters Display real, live aggregates of registration activity on both sides.

FR-504 Sample deals Show a rotating sample of pre-qualified businesses with term, yield, rating and the amount a pledger would earn.

FR-505 Disclosure State prominently that this is a non-binding demand simulation and that no funds are collected or issued.

11 2 Shared transactional core

FR-600 Single source of truth All apps MUST read and write the same core. No app MAY hold private authoritative state.

FR-601 Live propagation A committed change MUST be reflected across every affected app without a manual refresh.

FR-602 Deterministic computation Capacity, DSCR, rating, pricing, schedules, dispatch and fee calculations MUST be reproducible from stored inputs.

FR-603 Idempotency Every financial operation MUST be idempotent; a retried request MUST NOT double-post.

FR-604 Event log Every state transition MUST emit a durable event usable for notification, analytics and reconstruction.

FR-605 Policy as data All thresholds and rates MUST be configurable data, versioned and attributed—never hard-coded.

FR-606 At the 30-day cutoff, expire and close campaigns under BR-28 and FR-614, refund eligible failed-campaign commitments exactly once and notify affected parties. A campaign fully committed before cutoff may await funding reconciliation; the expiry engine must not override that retained settlement state.

Revision status: agreed technical contract refinement. Sources [N22](#) and [N13](#)

FR-607 Scheduler Open and close the monthly reporting window, trigger dispatch, escalate SLA breaches, release or freeze yield, and drive repayment due dates.

11 3 Durable decisions and recovery

FR-615 The shared core MUST retain immutable original operation result, amount, time and revision separately from fresh authorised current facts. A completed command is not automatically credit approval, provider payment or note issue.

FR-616 A timeout or unknown result MUST recover the original operation first. A not-found response alone does not prove economic failure. Retry of the same authorised intent uses the same key and payload; a corrected or new intent requires a new key. The interface MUST not optimistically credit money or blindly repeat a payment.

FR-617 A temporary high-risk hold **MUST** not automatically block incoming deposits, verified repayments or owned credits. Each action follows the actual restriction scope, eligibility, verified method and effective policy. A synthetic zero-fee deposit fixture does not establish a live zero-fee policy.

FR-618 State shown across role applications **MUST** come from the authoritative decision service and permitted data representation. Clients **MUST** render rather than reimplement money, fees, eligibility, rating, restrictions or lifecycle decisions.

These additions refine the existing shared-core requirements. They do not replace the original Pulse requirements or prove that Pulse uses an activated production underwriting policy.

Sources [N2](#) [N9](#) [N11](#) [N14](#) [PO](#)

FR-619 Demo and UAT environments **MUST** be clearly isolated from live-money and provider actions. An unknown environment, wrong data namespace or invalid live-money flag must refuse protected activity. Synthetic data and provider outcomes must remain distinguishable from live records. Source [Development environment isolation](#)

12 Computation specification

NORMATIVE FORMULAS

$$\begin{aligned}
 NOCF_m &= Inflow_m - Outflow_m \\
 CFADS &= trimmedMean(NOCF) - ExistingDebtService - OwnerDraw \\
 DSCR &= CFADS \div ProposedMonthlyRepayment \\
 Capacity &= (CFADS \div TargetDSCR \times Tenor) \div (1 + TotalReturn) \\
 Instalment &= (Principal \times (1 + TotalReturn)) \div Tenor \\
 Rating &= round(clamp(EngineScore \div 20, 0.0, 5.0), 1) \\
 Coverage &= Inflowperiod \div (Outflowperiod + DebtServiceperiod)
 \end{aligned}$$

Figure 1 — All monetary results round to the nearest franc; rates round to one decimal place. Capacity is solved from serviceable repayment, never from a requested amount.

FR-700 Rounding **MUST** be applied consistently and specified per computation; the sum of instalments **MUST** exactly equal principal plus total return, with any residual applied to the final instalment.

FR-701 Every computed figure shown to a user **MUST** be traceable to its inputs and reproducible on demand by Admin.

FR-702 Where a computation depends on a policy value, the governing policy version **MUST** be recorded with the result.

12 1 Revised fee calculations

FR-703 Proposed calculations **MUST** preserve these business identities: gross contractual earnings equal gross invested principal multiplied by the business total-return rate; investor fee equals the earnings component multiplied by the locked Plus fee rate; net earnings equal gross earnings less that fee. Returned principal is excluded from the fee base.

FR-704 For a funded business raise, proposed platform fee equals 2% of gross raised principal and net disbursement equals gross principal less that fee. A separately paid application fee is excluded from the disbursement deduction. Schedules continue to use gross principal and the agreed total return.

FR-705 A policy test pack **MUST** include every tier boundary, a cart that crosses a boundary, a cart that fails one allocation, subsequent tier changes, full and partial repayment, failed-campaign refund and duplicate execution. The exact-money and final-instalment residual requirements remain mandatory.

For illustration, RWF 12,000,000 raised at an 11.1% flat total return produces RWF 1,332,000 gross contractual earnings. The proposed 2% platform fee is RWF 240,000, leaving RWF 11,760,000 before any separately authorised charges. For a separate illustrative RWF 1,000,000 investor position at the same 11.1% gross rate and a locked 12% earnings fee, gross earnings are RWF 111,000, the fee is RWF 13,320 and net earnings are RWF 97,680. These are arithmetic examples, not a current offer or proof that the policy has been activated.

Sources [P5](#) [P6](#) [L1](#) [L2](#)

12 2 Observed underwriting differences requiring approval

The reviewed development engine differs materially from the July BRS and the earlier unactivated policy candidates. The following values are implementation facts, not an automatic amendment of business policy. The owner and risk approval trail must resolve each row before the matching calculation can be treated as a baselined production requirement.

Policy area	Retained baseline or proposed direction	Observed development behavior
Tenors	BR-20 remains 3, 6, 9 and 12 months absent an attributable replacement decision	Engine accepts 3, 4, 5 and 6 months and rejects 9 and 12
Credit size and exposure	Original BRS does not set these numerical limits; older plan treated related caps as unapproved	RWF 3M minimum, RWF 100M maximum and exposure ceiling of the lesser of 35% trailing annual revenue or RWF 100M
CFADS deductions	Baseline uses a volatility-trimmed NOCF measure less debt service and owner draw	Mean NOCF less the greater of mean/evidenced recurring owner draw and greater of mean/peak contractual debt service
Offer rounding	Original nearest-franc computation with exact schedule residual	Offer reduced to RWF 5,000 unit grid, then schedule and affordability rechecked
Pricing premiums	Baseline requires deterministic rating and tenor pricing within 10–15%; earlier candidates are not activated	For 3/4/5/6 months the code uses premiums 0, one sixth, one third and one half percentage points, then half-up one-decimal rounding

Sources [Tenors and pricing](#) [Cash flow evidence](#) [Exposure](#) [Offer quantisation](#)

The DSCR 1.25 original-request floor and 1.50 standard-offer target have supporting owner decisions and are therefore treated separately from the unconfirmed numerical changes above. A request to reconcile this BRS does not resolve those missing approvals.

13 Non functional requirements

NFR-1 Availability Core transactional services **MUST** target high availability, with planned maintenance announced in advance and surfaced through app maintenance mode.

NFR-2 Data integrity No committed financial transaction **MAY** be lost or double-applied under any failure mode. Reconciliation **MUST** detect and report any imbalance.

NFR-3 Security Encryption in transit and at rest; managed key rotation; least-privilege access; secrets never in source; regular penetration testing.

NFR-4 Authentication Strong authentication for all parties; multi-factor for staff and Audit Partners; biometric binding for Audit Partners; session expiry and revocation.

NFR-5 Auditability Every state change **MUST** be attributable to an actor and reconstructible in sequence.

NFR-6 Performance Interactive screens **MUST** remain responsive on mid-range Android devices over intermittent mobile networks; statement parsing **MAY** be asynchronous with clear progress feedback.

NFR-7 Resilience The Auditor app **MUST** function fully offline in the field and synchronise without loss.

NFR-8 Accessibility Adequate contrast, legible minimum type sizes, and touch targets no smaller than 44 px.

NFR-9 Localisation Architecture **MUST** support Kinyarwanda, English and French; all user-facing strings externalised.

NFR-10 Clarity Financial figures **MUST** be shown in full francs with thousands separators where precision matters. No user-facing jargon without an inline explanation.

NFR-11 Scalability The platform **MUST** scale to thousands of concurrent monthly audits without a proportional increase in Rozine operations headcount.

NFR-12 Recoverability Backups **MUST** be automated, encrypted, geographically separated and restore-tested on a defined cycle.

NFR-13 Observability Structured logging, metrics and alerting across all services, with dashboards for the platform KPIs.

NFR-14 Data residency Personal and financial data **MUST** be stored in compliance with Rwandan data-protection requirements.

13 1 Verification and operational readiness

NFR-15 Merge and release evidence **MUST** identify the exact reviewed commit and contain the required complete tests, architecture checks, static analysis, client behavioral coverage and financial concurrency tests. A green earlier commit or selected test subset is insufficient for the release candidate.

NFR-16 Financial race and recovery evidence **MUST** use the authoritative transactional database behavior, including concurrent checkout, exposure reservation, provider duplicate events and mutually exclusive issue/refund outcomes. Test doubles and synthetic providers do not establish live provider readiness.

NFR-17 User interfaces **MUST** cover unavailable, stale, expired, restricted, validation-error, unknown-outcome, retry and offline/reconnect states with truthful next actions. No fabricated balance, guessed date, unapproved fee or fake destination may substitute for missing data.

NFR-18 Production physical capture and offline fieldwork **MUST** be validated separately from an online audit preview. Synthetic or unattested evidence, browser-only tests and a successful software seal are not proof of camera-only field capture, device integrity or production offline recovery.

Sources [PO](#) [N11](#) [N14](#) [N20](#)

14 Integrations and compliance

14 1 Integrations

IR-1 Mobile money providers Disbursement, collection, wallet funding and withdrawal.

IR-2 Commercial banks Segregated account operation, settlement and reconciliation.

IR-3 Identity verification Individual identity confirmation for KYC.

IR-4 Business registry Confirmation of registration and ownership for KYB.

IR-5 ICPAR register Verification of member ID, practising certificate and standing.

IR-6 Messaging providers SMS, email and push delivery of notifications.

IR-7 Mapping/geocoding Premises geolocation, dispatch radius and evidence cross-check.

IR-8 Supervisory reporting Delivery of periodic returns to the regulator.

14 2 Compliance requirements

CR-1 KYC and KYB MUST be completed and verified before any transaction is permitted, with tiered limits by verification level.

CR-2 AML transaction monitoring MUST run continuously, with case management, escalation and regulatory reporting.

CR-3 Sanctions and PEP screening MUST be performed at onboarding and periodically thereafter.

CR-4 Investor funds MUST be segregated and reconciled daily.

CR-5 Every listing MUST carry complete disclosure: verified financials, rating basis, all fees, tenor, schedule and explicit risk warning.

CR-6 The platform MUST NOT represent, imply or permit marketing suggesting capital protection or guaranteed return.

CR-7 The product exposure rule MUST limit one investor to 50% of a raise target, counting existing commitments plus the proposed checkout. No additional product-imposed total-investment, number-of-businesses or investor-category cap is retained. Actual conditions imposed by the regulator, if any, MUST be separately recorded, reconciled and enforced before live operation.

Revision status: agreed product policy; actual sandbox conditions unverified. Sources [P1](#) [P2](#) [L1](#)

CR-8 A documented complaints and dispute-resolution process MUST be available to all users and evidenced in the system.

CR-9 Records MUST be retained for the statutory period and be producible on regulatory request.

CR-10 Personal data processing MUST comply with Rwandan data-protection law, with lawful basis, consent capture and subject-rights handling.

CR-11 Audit Partner engagements MUST be performed under ISRS 4400 agreed-upon procedures with retained working papers.

CR-12 The platform MUST support a read-only supervisor seat providing live visibility of the operating state.

CR-13 Sandbox caps and conditions MUST be enforceable as policy values, without code change.

14 3 Legal content and factual claims

CR-14 The MVP legal documents MUST be revised to match the approved product, including zero MVP application fee, the production fee trigger, one-time business fee, five-tier earnings charge, cart checkout, applicable exposure rule, institutional sign-up, default day and deferred features. English-only legal text is agreed for MVP; users MUST be told which language they are accepting.

CR-15 The platform MUST NOT state that CMA sandbox authorisation or NCSA registration is already held without verified evidence. The owner confirmed that these approvals were not in place. A decision to submit a sandbox application while they are pending MUST NOT be treated as legal permission to operate with real users or funds.

CR-16 The Privacy Note **MUST** accurately describe the actual processing arrangement approved for disclosure: Contabo hosting in Germany for platform data, and Resend processing in the United States for email names, addresses and message content. The agreed privacy contact is info@rozine.rw. Any assertion about authorisation to store real users' data abroad requires qualified legal and regulatory confirmation.

CR-17 A changed legal document **MUST** be issued with a new version identifier, hashed and loaded through the governed consent process. Approval in an issue comment **MUST NOT** silently rewrite a version that users have already accepted.

CR-18 MVP legal text **MUST** omit promised credit-bureau checks or reporting, collateral or guarantee enforcement, a First-Loss Reserve Fund and facial biometric KYC where these are deferred and not delivered. Existing Audit Partner identity assurance still requires its own approved scope decision; the investor KYC deferral does not silently waive all auditor controls.

Sources [L1](#) [L2](#) [L3](#) [L4](#) [L5](#) [L6](#)

CR-19 When approved legal content is missing, the system **MUST** withhold protected submit or investment capability rather than substitute a fixture, summary-only consent or fabricated version. The full immutable body and approved disclosure summary must be available before acceptance.

Sources [N2](#) [N3](#) [N7](#)

CR-20 Present Investor Terms at sign-up and each purchase, Business Terms at sign-up or application and the Review signature, and the Privacy Note across the applications. A new applicable document version requires renewed acceptance under the governed consent flow; the platform must not silently carry consent from an obsolete version. Sources [Issue 154 legal release requirements](#) and [Consent version check](#)

15 Assumptions constraints dependencies

CLASS	STATEMENT
Assumption	Target businesses transact predominantly through bank and mobile-money channels, producing machine-readable statement history.
Assumption	ICPAR-accredited accountants are available in sufficient number and geographic spread to serve the dispatch radius.
Assumption	The RCMA sandbox remains an available pathway for a platform of this type.
Assumption	Retail investors will accept a fixed-return, capital-at-risk instrument when verification is credible and disclosure is plain.
Constraint	Rozine MUST NOT take deposits, lend as principal, or guarantee capital.
Constraint	All instruments are denominated in Rwandan francs in v1.
Constraint	Tenors are limited to 3, 6, 9 and 12 months; total return is bounded at 10–15% flat.
Constraint	Tax-authority verification remains excluded; TIN identity collection requires the formal DR-8 amendment.
Dependency	Payment-rail agreements with mobile-money providers and a banking partner for segregated accounts.
Dependency	A working relationship with ICPAR for licence verification and disciplinary referral.
Dependency	Regulatory admission to the sandbox before live operation.

CLASS	STATEMENT
Dependency	Parsing accuracy sufficient across the major statement formats in market.

15 1 Decisions that prevent unconditional approval

Decision	Required resolution	Responsible function
Policy adoption	Update and jointly approve the contract, including latest September fee values rather than stale tables	Product and Engineering
Legal versions	Reconcile all product changes and issue final new identifiers and hashes	Product and Legal
Overseas processing	Establish whether real-user onboarding in Germany may start before NCSA authorisation	Legal and Compliance
Live operation	Verify the actual CMA conditions and provider permissions for intended activity	Product and Compliance
Audit fee allocation	Define accrual and release after the service fee moves to disbursement	Finance and Product
Exact fee and penalty semantics	Approve rounding, allocation, cap base, refund and secondary-transfer behavior	Finance and Engineering
Underwriting	Reconcile September revenue/history/DSCR changes with earlier unactivated formula candidates	Product Risk and Engineering
Recovery readiness	Resolve the reported lack of backup copies against retained NFR-12 and prove restore	Engineering and Security
Secondary release scope	Retain approved mandatory MVP RC scope; correct contradictory issue text; fix maker/taker roles	Product and Engineering
Capital definition	Resolve issued and unissued inclusion, refunds and transfer effects without changing lifetime locks	Product and Finance
Audit calendar	Fix CPA sealing deadline separately from preparation notices and business review window	Product and Operations
Completion evidence	Establish exact commit, production deployment, tests and applicable real-rail acceptance	Engineering and Operations

These are decision gates, not permission to replace missing values with assumptions. The product-owner approval of the revised privacy wording does not itself answer the outstanding counsel question or supply a new document version identifier.

Sources [PO](#) [CO](#) [P1](#) [L1](#) [L2](#) [L3](#) [L4](#) [L5](#)

Additional decisions remain open: maker/taker mapping; exact active-capital base; annual revenue period; audit fee accrual; the replacement-versus-supplement relationship between the late ladder and the older annual penalty; investor late-fee view; dispute CPA response SLA; exactly two versus at least two bank signatories; production application fee activation and rails; institutional verification workflow; and numeric availability and recovery objectives. These values must not be inferred from sample screens.

Observed code also uses different tenors, credit-size and exposure limits, CFADS deductions and offer quantisation from the original BRS. These discrepancies are listed in section 12 2 and require attributable product and risk approval; neither the existence of code nor an earlier unactivated candidate resolves them.

16 Acceptance criteria

AC-1 A business can be onboarded, verified, statement-parsed, capacity-computed, co-signed, listed, funded, disbursed, serviced across a full schedule, and matured—end to end, on production rails.

AC-2 An investor can register, verify, fund a wallet, invest from RWF 5,000, receive a monthly verified report, receive scheduled payouts, sell on the secondary market, and withdraw.

AC-3 An Audit Partner can be accredited, accept the released engagement terms, receive a permitted job, complete the required on-site capture with validated offline recovery, and seal the report. A new monthly report then passes the delivered Business review or dispute process before its permitted investor-safe view publishes.

Revision status: revised acceptance target. Sources [P2](#) [N8](#)

AC-4 Admin can observe and command every entity and action described in Section 10, with every action gated by role and logged with a reason.

AC-5 No note can be originated above current verified capacity, at a disallowed tenor or outside the adopted gross-return band. No staff role or capacity-adjustment route may bypass failed current credit, exposure, evidence or mandate conditions; every permitted adjustment is reasoned, authorised and logged.

Revision status: revised acceptance target. Sources [N5](#) [N16](#)

AC-6 A breach of the CPA governing reporting SLA triggers the adopted escalation, yield freeze, note flag and notification controls. An unexpired Business review window or a valid paused dispute does not itself establish that breach. The CPA deadline must be reconciled before this acceptance case can pass.

Revision status: revised acceptance target; deadline unresolved. Sources [P2](#) [N8](#)

AC-7 The ledger reconciles exactly: assets held equal obligations owed, across every account, every day.

AC-8 A regulator with a read-only seat can inspect the live operating state and reconstruct any historical decision from stored inputs.

AC-9 Tax-authority verification, EBM integration, credentials and tax-compliance badging MUST be absent. Any TIN collection MUST be restricted to the explicitly approved identity purpose, authorised by the adopted DR-8 amendment and reflected in the privacy and KYB controls. Until that amendment is adopted, the prior blanket prohibition remains the release gate.

Revision status: revised acceptance target requiring formal amendment. Sources [B0](#) [P2](#) [L2](#)

AC-10 Every app displays the rating identically: one word, one number out of five to one decimal, one colour.

AC-11 Pulse operates with no funds collected and no instrument issued, and its counters reflect real registrations.

AC-12 A penetration test and an independent security review are completed with no unresolved high-severity finding.

16 1 Acceptance of the revised requirements

AC-13 Verify that all 205 July requirement identifiers remain traceable and that every changed requirement has a recorded decision, implementation disposition and owner for any unresolved gate.

AC-14 At each capital boundary, the entire multi-note cart receives the correct latest Plus rate based on post-cart active capital. The resulting rate remains unchanged for those investments after later capital movements.

AC-15 For one invalid or oversubscribed cart allocation, no allocation commits and no investor money or ownership changes. Two concurrent checkouts cannot breach note capacity, the investor balance or the 50% exposure cap.

AC-16 Repeat the same confirmed checkout, provider callback and repayment attempt. Exactly one economic result is recorded for each, with consistent receipt, ledger and event history.

AC-17 Returned principal incurs no Plus fee. Gross earnings, earnings fee, net earnings and total payout reconcile exactly, including final-installment rounding.

AC-18 A fully funded RWF 12,000,000 raise under the proposed fee rule deducts RWF 240,000 once and schedules repayment on RWF 12,000,000. An application fee already paid is not deducted again; the MVP application fee is zero.

AC-19 At checkout, attempted allocations above 50% of a raise are refused. Splitting into cart lines or using repeated requests does not evade the cap. Other product category caps are absent unless separately required by an actual approved sandbox condition.

AC-20 Test below, at and above the proposed revenue, history and DSCR boundaries. Decisions use the adopted policy version, explain rejection, and do not mix the old 1.00/1.25 bands with the new 1.25/1.50 direction.

AC-21 Deliver a sealed audit report, approve it within 24 hours and observe publication. Repeat without response and observe one auto-approval. Repeat with a dispute racing the deadline and prove publication pauses.

AC-22 Submit dispute files, text up to 1,000 characters, and both. Reject text exceeding the limit. Route first to the CPA, preserve evidence, support staff escalation and give an amended report a fresh review window.

AC-23 Corporate bank onboarding requires two signatories; report acceptance permits one authorised signatory. Neither role can act for another business without record-level permission.

AC-24 Reject dispatch outside 30 km, a fourth simultaneous active job, expired accreditation and a declared conflict. An unexplained variance cannot be silently accepted under an obsolete percentage tolerance.

AC-25 At 23:59 CAT, collect the due instalment once; with insufficient funds, retry on the approved days 1–7. Exercise partial and early payments, late callbacks and duplicate jobs without overcollection.

AC-26 For the adopted late ladder, verify the day-0, day-7 and day-30 assessments, partial-payment reductions and maximum per-installment charge. Verify that recovery and day-31 Default events are distinct and that assessed penalties are not shown as paid investor income.

AC-27 A confirmed checkout cannot be cancelled at the investor's discretion. Whole-campaign failure or cancellation returns eligible commitments exactly once and reconciles balances, campaign state and active-capital records.

AC-28 Test withdrawal values immediately below, at and above RWF 1,000 and RWF 2,000,000. Display the provider fee and processing status, and recover safely from a failed or delayed provider outcome.

AC-29 Institutional onboarding captures only the approved entity and representative fields, attributes consent and authority correctly, and blocks investment until the required company checks are complete. The verification workflow must be approved without inventing a High-Net-Worth product experience.

AC-30 The fee disclosure for a secondary transaction matches the formally adopted maker/taker policy. Buyer and seller cash and holdings settle atomically, with no platform-owned inventory or guaranteed exit.

AC-31 Every consent points to the exact approved text, version, hash and language. A text change cannot silently reuse an accepted version. UI fees and legal promises match the activated policy.

AC-32 Release evidence includes a verified disposition for the CMA/NCSA and overseas-data questions. No page states that authorisation is held merely because an application was submitted.

AC-33 The accepted privacy wording matches actual hosting and email processing, uses the agreed contact, and excludes unsupported biometric, credit-bureau, guarantee or reserve features from MVP promises.

AC-34 Demonstrate an encrypted backup and successful restore on the approved recovery schedule. The recorded absence of secondary copies cannot count as satisfying the retained recovery requirement.

Sources [B0](#) [P1](#) [P2](#) [P3](#) [P4](#) [P5](#) [P6](#) [P7](#) [L1](#) [L2](#) [L4](#) [C0](#)

16 2 Acceptance of the integration contract

AC-35 Switching roles, losing membership or changing company mandate clears stale private data and blocks unauthorised actions. A sole trader is supported without invented company identity; a typed name cannot substitute for required signer identity.

AC-36 Final authorised Business acceptance reserves exposure once. Replays, duplicate submissions, staff review and publication cannot reserve it twice or manufacture consent. A month rollover or changed quote requires new acceptance while history remains intact.

AC-37 Exercise complete-month history, the repeat-route prerequisites and the day-45/day-46 freshness boundary using Africa/Kigali dates. Failed requests do not return a numeric offer that can be accepted.

AC-38 Test reservation expiry at the exact boundary and under a confirmation race. Preserve allocated rights and the original successful receipt on replay; do not make unsafe returned units available for resale.

AC-39 Verify that committed percentages, retained funding, disbursement, issue and cash refund are distinct. The four unit buckets reconcile to total; a refunded commitment leaves current totals without deleting purchase history.

AC-40 Before issue, show no contractual maturity date or Holding. On reconciled disbursement success, create one issue with the effective Kigali date and approved month-end schedule while retaining the committed money allocation.

AC-41 A pending or unknown deposit does not inflate wallet totals. Verified credit creates one correlated receipt. A temporary high-risk hold permits only those incoming actions allowed by its scope and does not authorise unrelated payments.

AC-42 Verified investor views reveal only permitted aggregates, summaries and sanitised photo derivatives. Raw evidence, precise location, private bank data and internal scoring inputs remain restricted. Business funding views reveal no investor identities.

AC-43 Disbursement rejects same-person maker/checker attempts and Superadmin-only approval. Missing data produces no send or speculative refund. Requery never resends; a reconciled outcome settles exactly once, and issue and refund cannot both succeed.

AC-44 A timeout is recoverable from the original operation without duplicate money movement. Original receipts remain immutable and are visibly distinct from fresh current state.

AC-45 Fresh MFA and released agreement versions gate sealing, a conflict immediately removes private work access, and Flash deadlines survive reassignment. Monthly timeout publication records an automatic action rather than an invented human signature.

AC-46 The approved MVP release candidate includes the mandatory secondary-market capability, or has an explicit superseding product approval. The candidate commit has complete test and review evidence; production provider, field-capture, offline and regulatory gates remain separately evidenced before live acceptance.

Sources [N1](#) [N2](#) [N3](#) [N4](#) [N5](#) [N6](#) [N7](#) [N8](#) [N9](#) [N10](#) [N11](#) [N12](#) [N13](#) [N14](#) [N16](#) [N17](#) [P0](#)

AC-47 The adopted underwriting policy resolves every difference in section 12 2, with approved values, calculation vectors and policy version. Tests cannot accept 3/4/5/6 tenors or new exposure limits merely because those constants already exist in development.

AC-48 Demo and UAT execution cannot send live provider payments or consume live data namespaces. Synthetic evidence is clearly labelled and cannot satisfy production operational acceptance.

Sources [Current pricing code](#) and [Environment isolation](#)

Appendices

A Consolidated policy parameters

PARAMETER	VALUE AND REVISION STATUS
Permitted tenors	3, 6, 9, 12 months
Total return floor/ceiling	10% / 15% flat on principal
Minimum investment	RWF 5,000
Affordability target DSCR	1.50× proposed target; activation gated
Original-request DSCR floor	1.25× proposed floor; no silent resize to evade it
Rating band thresholds	4.0 / 3.0 / 2.0
Monthly report review	24 hours from delivery for new monthly seals; CPA deadline unresolved
Flash Audit completion	24 hours
Dispatch radius	30 km
Audit Partner yield share	25% of service fee
Service fee	2% of gross principal at disbursement under proposed amendment
Investor earnings fee	Locked Plus rate on earnings only; five bands in section 6
Secondary fee	Proposed 0.5% taker and 0.2% maker; mapping unresolved
Listing validity	30 days
Note/photo limits	100 characters; 5 photographs per party per report

B Glossary

TERM	DEFINITION
Note	The instrument issued by a business and held by investors, carrying a fixed total return and fixed monthly repayments.
Capacity	The maximum a business may raise from a current verified evaluation. A requested target does not create entitlement.
CFADS	Cash flow available for debt service—verified operating cash flow after existing obligations and owner drawings, volatility-adjusted.

TERM	DEFINITION
DSCR	Debt service coverage ratio—CFADS divided by proposed monthly repayment.
Audit Partner	ICPAR-accredited CPA contracted to perform on-site verification and co-sign reports under ISRS 4400.
Verification seal	Cryptographic hash binding auditor identity, licence, report contents and timestamp to a published report.
Flash Audit	Randomly triggered 24-hour re-verification of a business and its Audit Partner.
Health status	Period-level condition derived from the verified report: Healthy, Watch or Distressed.
ISRS 4400	International Standard on Related Services governing agreed-upon-procedures engagements.
ICPAR	Institute of Certified Public Accountants of Rwanda.
RCMA	Rwanda Capital Market Authority.
Pulse	Pre-launch demand-aggregation portal. Collects no funds and issues no instrument.

Implementation status at review

The status below reflects static code, repository and pull-request inspection. It is not a fresh test run, production deployment inspection or proof of operational acceptance. The reviewed main commit is 661480a66fc0e609579b5720dd80408d04baf341 and the development commit is e848a3ac305d12de9239a1212ceda4589565dc43. These snapshots are distinct.

Merged development capabilities

Identity and role authority Canonical verified identity, revisioned membership, active role and current scope are in development. Email registration alone does not confer KYC authority. Requirements FR-100 and FR-608–609; BR-102–105. [Code evidence](#)

Mandates and Business acceptance Current quote and actual required signatories; final acceptance atomically reserves exposure. Staff release and publication reuse that authority. Requirements FR-200 and FR-219–220; FR-610. [Code evidence](#)

Evidence and underwriting Separate verification stages, complete-month evidence, DSCR evaluation and offer calculations are present. Numerical policy differences still require reconciliation. Requirements BR-10 and BR-14–15; FR-223; section 12 2. [Code evidence](#)

Monthly report review The 24-hour monthly review and evidenced dispute path are merged through PR 126. Automatic publication does not create a human signature. Requirements BR-41; FR-313–314 and FR-323–324. [Code evidence](#)

Public evidence projection Restricted public verification exposes limited seal facts. This is not permission to expose raw evidence or private identity. Requirements FR-102–103 and DR-17. [Code evidence](#)

Campaign publication and zero-money closure Staff release, publication, zero MVP fee and zero-commitment closure are present. Closures with investor money require further settlement evidence. Requirements BR-28; FR-610 and FR-614. [Code evidence](#)

Wallet and operation recovery Ledger-based wallet and deposit-intent/verified-credit distinctions are present with a guarded synthetic provider. Real provider integration is unavailable in the reviewed evidence. Requirements DR-15; FR-615–617; IR-1. [Code evidence](#)

Business fee display PR 182 fee-disclosure UI is merged, but fixture-first and not fully bound to live server policy. It still describes the older repayment-based 2% fee. Requirements BR-62 and FR-215 require alignment. [Code evidence](#)

Unmerged or incomplete money flows

Primary reservation and checkout PRs 175 and 191 contain candidate exact-unit reservation and confirmation logic. Current admission and HTTP integration remain gated. This is not a delivered multi-note cart. Requirements FR-115–117 and FR-611. [Evidence](#)

Funding and holdings The 189/190/191 candidate work is not evidence of a completed live funding-to-issue chain. Authoritative admission, destination and connection facts, concrete Holding creation and exposure conversion remain incomplete. Requirements FR-612–614 and FR-426. [Evidence](#)

Disbursement and reconciliation PR 176 contains maker/checker and reconciliation candidates at commit 848931e4. Current-head integration and acceptance are not established; live provider and required source inputs remain unavailable. Requirements FR-423–426. [Evidence](#)

Final-checkout conflict The reviewed primary candidate still contains an individual-refund route that predates the final owner decision. Align it to whole-campaign closure; do not describe discretionary investor cancellation as current policy. Requirements BR-93 and AC-27. [Evidence](#)

Plus fee conflict The reviewed primary candidate contains the older six-tier 10/8/6.5/5.5/5/4% table. It must be reconciled to the latest five-band 15/12/10/9/8% direction and the approved active-capital definition. Requirements BR-96–97 and AC-14–17. [Evidence](#)

Contract adoption PR 180 remains open and unmerged. Its older snapshot and unticked joint sign-off checklist do not establish adoption of the later September 30 policy answers. N6 monthly review was separately reported adopted and merged. Requirements BR-90 and CR-14–20. [Evidence](#)

Remaining release evidence

The outstanding chain includes authoritative funding admission, verified destination and connection checks, current closing authority, mutually exclusive issue/refund, exposure conversion, safe unit recycling, real payment rails and alignment with the final fee and checkout decisions. Cart checkout, institutional verification, withdrawals, automatic collection, secondary-market readiness, physical audit capture and full operating acceptance must each be evidenced independently; an implemented upstream component does not establish the whole journey.

Open pull requests were reviewed as candidate work, not releases: 175 at 23948fa2; 176 at 848931e4; 181 draft at 2bdc315e; 189 draft at 2d9acc2c; 190 draft at 9fe92184; 191 draft at 9db93c8b; and 192 at bc3a98ff. The code links above pin the specific evidence used rather than implying that all later commits were reviewed.

Source and requirement traceability

The baseline requirements appear in their original order under the original 16-section structure. Their identifiers are retained even where the current proposal changes the text. Repeated page furniture and broken extraction across table cells have been repaired without changing the underlying rule.

Baseline inventory

Class	Retained identifiers	Count
Business objectives	BO-1 through BO-8	8
Business rules	BR-1-5, 10-17, 20-28, 30-37, 40-48, 50-56, 60-67, 70-75, 80-84	65
Data	DR-1 through DR-8	8
Functions	FR-100-113, 200-213, 300-312, 400-418, 500-505, 600-607, 700-702	77
Nonfunctional	NFR-1 through NFR-14	14
Integrations	IR-1 through IR-8	8
Compliance	CR-1 through CR-13	13
Acceptance	AC-1 through AC-12	12

Revision crosswalk

Requirements	Change from baseline	Governing sources
BR-14-15, FR-216, AC-20	Explicit revenue history and DSCR direction replaces earlier undefined or different thresholds	P1 C0
