

UPDATED PRODUCT BASELINE

Business Requirements Specification

Consolidated for stakeholder and sandbox-application review

Version 1.1 - consolidated review edition
26 September 2026

Document control	Value
Purpose	Updated BRS for stakeholder review and preparation of CMA sandbox application answers.
Status	Consolidated review draft. This edition is not an external approval, live-readiness certificate or submitted application.
Product owner	Rozine Technologies Ltd - Product
Audience	Product, Engineering, Finance/Risk, Compliance, Audit Operations and sandbox reviewers
Policy basis	July 2026 BRS plus recorded September stakeholder decisions and engineering-2026-09-23.4 MVP defaults.
Source cutoff	Local project documents reviewed on 26 September 2026. The original BRS is preserved.
Classification	Confidential

This document describes required behavior. It does not offer securities or certify provider, regulatory, professional, reserve-funding or production evidence. No application form was supplied; the navigation guide maps topics, not official question numbers.

Contents

1. Purpose, authority and application guide	3
2. Objectives and delivery scope	4
3. Participants, authority and disclosure	5
4. Records and data integrity	6
5. Business and note lifecycles	8
6. Underwriting and borrower eligibility	9
7. Pricing, rating and computation	11
8. Money, wallets, fees and repayments	13
9. Secondary trading and settlement	15
10. Arrears, recovery and reserve design	16
11. Account restrictions and customer remedies	18
12. Audit, reporting and evidence assurance	19
13. Application capability catalogue	21
14. Security, quality and retention	27
15. Integrations and compliance requirements	28
16. Acceptance and verification	30
17. Operational evidence and application gaps	31
18. Amendment traceability and sources	32

SECTION 1

1. Purpose, authority and application guide

Source basis: S1-S5. Source key and edition details are in section 18.

Rozine is a Rwanda-focused capital marketplace connecting verified businesses with investors through RWF fixed-return notes. This edition consolidates the current recorded business rules across the Investor, Business, Auditor and Admin applications, Pulse and the shared transactional core.

Confirmed dated product/user decisions govern conflicting older documents. The September 23 MVP baseline section 11 resolves the five configuration groups and overrides historical pending-default wording; sections 10, 8.4/8.5 and 3-7 apply where unchanged. This draft expresses those decisions in a single BRS without attributing delegated defaults to Robert or Kimani as new answers.

Existing requirement IDs are preserved. New explanatory tables specify the later amendments. MUST denotes a mandatory rule, SHOULD a strong recommendation, and MAY a permitted option. Implementation, deployed behavior and live acceptance require their own evidence; old source-stage labels are not used as a current implementation report.

CMA application topic guide

Topic to explain	BRS location
Problem, target users and proposition	Sections 2-3: objectives, scope and participants
Product structure and pricing	Sections 5-8: lifecycle, underwriting, rating and money
Trading and liquidity	Section 9: investor-to-investor secondary market and restrictions
Risks, customer protection and recovery	Sections 8, 10-11: segregated funds, reserve dependencies and complaints/holds
Verification and technology controls	Sections 12-15: audit evidence, applications, security and providers
Testing, readiness and rollout conditions	Sections 16-17: acceptance and evidence still required
Traceability for refined rules	Section 18: amendment map and source editions

Material updates incorporated

The main changes are 3/4/5/6-month terms; first-time 36-month and eligible-repeat 12-month audited history; an original-request 1.25 DSCR cutoff and final 1.50 standard target; RWF 3M-100M sizing and borrower-wide exposure limits; RWF 5,000 issuance units; 0.35% secondary fees on each side; partial trading and funded bids; a day-1 to day-45 recovery model; selected reserve, hold and Auditor operating defaults; and no MVP override of core financial safeguards.

SECTION 2

2. Objectives and delivery scope

Source basis: S1, S4-S6. Source key and edition details are in section 18.

ID	Requirement
BO-1	Enable profitable, asset-light Rwandan businesses to raise growth capital without collateral. / Capital deployed; number of distinct businesses funded; median days from application to funded.
BO-2	Give retail investors a comprehensible, verified, fixed- return instrument accessible from RWF 5,000. / Registered investors; median first-ticket size; reinvestment rate at maturity.
BO-3	Make monthly verification of small-business performance cheap, rigorous and routine. / Cost per verified report; report SLA compliance rate; parsing accuracy against auditor ground truth.
BO-4	Never permit a business to borrow beyond its verified debt- service capacity. / Zero notes originated above computed capacity; portfolio at risk by cohort.
BO-5	Provide pre-maturity liquidity to investors through a functioning secondary market. / Secondary volume; median time-to-fill; spread to par.
BO-6	Operate to a supervisory standard from day one, sufficient to enter and exit the RCMA sandbox successfully. / Sandbox admission; zero material findings; licence granted.
BO-7	Earn through disclosed platform services with transparent accounting. / Monitor revenue by fee line. The later recovery design separately records collected penalties as platform revenue; this amends the earlier zero-distress-revenue wording.
BO-8	Build a durable, disciplinable Audit Partner profession with aligned economics. / Accredited partners; partner retention; yield-share paid; disciplinary incidence.

Included product scope

Underwriting, primary origination, investor wallets and holdings, monthly audited reporting, repayment servicing, recovery, complaints, atomic secondary trading, policy administration, professional accreditation and supervisory reporting form the full-product scope. The initial delivery plan centers on four authenticated role applications and a shared launcher in responsive web/PWA form, with a narrowly scoped secure-capture companion where device assurance requires it.

Boundaries and later delivery

Boundary	Requirement or disposition
Currency and jurisdiction	RWF instruments and Rwanda operating scope. Foreign currency, FX and cross-border settlement need a separately approved program.
Marketplace role	No deposit-taking or origination from Rozine principal. Client funds are segregated. The selected company-funded reserve recovery mechanism is an explicit later design departure; its real arrangements and legal treatment remain evidence requirements.

Boundary	Requirement or disposition
Instruments	Fixed-return notes only. Equity, convertible instruments, new invoice/inventory products, insurance and credit guarantees are not implicitly included.
Prohibited data	No tax-authority integration, tax-derived verification, TIN, EBM identifier, tax-authority credential or tax-compliance badge.
Later channels	Full native role apps and Pulse are planned after the MVP release-candidate gate. Pulse scope disposition D-62 remains explicitly tracked; its BRS acceptance is not silently removed.
Plus / automation	D-61 still requires signed scope disposition or a complete approved policy and scope rebaseline. This document does not declare those MVP-spec rows accepted or exempt.
Other exclusions	No general public/institutional API product, direct investor wallet transfers, discretionary managed portfolios or ordinary platform market making is authorized by the MVP. Mandatory secondary settlement and read-only supervisory access remain included.

SECTION 3

3. Participants, authority and disclosure

Source basis: S1, S3 section 11.1. Source key and edition details are in section 18.

Participant	Responsibility
Investor	Completes verification, invests, monitors holdings and reports, trades eligible units, receives payouts and withdraws through approved rails.
Business	Provides verified history and mandate, requests financing, accepts an eligible offer, reports monthly and repays.
Audit Partner	ICPAR CPA with current practising status; performs agreed procedures, captures evidence and co-signs findings.
Staff	Analyst, Approver, Treasury, Compliance and Superadmin operate scoped underwriting, audit, money, case and policy functions.
Supervisor	Read-only visibility of authorized operating records and historical decisions.
Pulse prospect	Registers non-binding interest; Pulse collects no money and creates no instrument.

ID	Requirement
BR-1	Every administrative action must be authorized by the current role and effective mandate.
BR-2	Every administrative action writes an immutable record of actor, target, action, non-empty reason and timestamp.

ID	Requirement
BR-3	Material actions require explicit confirmation and the applicable approval control. Manual money adjustments outside deterministic rules require two distinct authorized staff.
BR-4	Act-as is read-only, visibly indicated, time-boxed and separately logged.
BR-5	No role, including Superadmin, may delete ledger or audit history.

Investor and Business memberships may coexist. Audit Partner membership is mutually exclusive for the same verified person; privileged staff accounts are separate. Self-dealing and connected-person restrictions apply across logins. A sole trader uses one verified owner/signatory; a company uses its effective entity-specific mandate. Verify beneficial owners, controllers, directors and every required signatory. Missing or conflicting authority denies the action.

Audience	Permitted information
Public	Anonymized market summaries; no raw statements, bank identifiers, internal scores or case evidence.
Verified investor	Disclosed financial aggregates, published rating and basis, tenor, schedule, fees, risks and authorized report summaries.
Holder	Own purchased terms, entitlements, receipts and recovery updates.
Business / assigned Auditor	Own or assigned evidence subject to current authority.
Compliance / Legal	Case-scoped supporting evidence under authorized access.

The detailed staff matrix retains separation of duties: Approver decides applications; Treasury handles authorized ledger adjustments; Compliance/Legal manage governed cases; Superadmin manages staff/policy. A broad role label never grants a financial-integrity override.

SECTION 4

4. Records and data integrity

Source basis: S1, S3 sections 3-5 and 10-11. Source key and edition details are in section 18.

Record group	Required content
Party and authority	Verified person/entity, memberships, KYC/KYB state, effective signatory mandate, contact, premises and restrictions.
Business evidence	Rail inventory, original statements, hashes, monthly observations, classifications, draws, debt schedules, TTM revenue, baseline/gap history and amendments.
Application and offer	Original requested principal, tenor, evidence/policy revisions, exact calculation, eligibility, chosen offer, mandate acceptance and decision reasons.
Campaign and note	Target, unit grid, funding commitments, disbursement intent/outcome, immutable issue rating/return/schedule, live rating and assigned steward.

Record group	Required content
Ownership and trading	Fixed unit ordinals, per-component rights, record-date entitlement markers, listings, funded bids, reservations, trades and release history.
Audit report	Reporting period, source/derived figures, both notes/photos, capture lineage, licence/assignment authority, procedure findings, seal and amendment links.
Money and controls	Double-entry ledger, segregated account reconciliation, fees, arrears, reserve backing/payout evidence, case decisions, command outcomes and durable events.

ID	Requirement
DR-1	All monetary amounts MUST be stored as exact decimal values in Rwandan francs. Floating-point representation of money is prohibited.
DR-2	Every balance MUST be derived from immutable ledger entries. No stored balance field MAY be mutated directly.
DR-3	Every uploaded statement MUST be retained in original form alongside its parsed derivation, with both linked to the report or application that used them.
DR-4	Every evidence photograph MUST retain capture timestamp, device-reported geolocation and capture method (in-app camera only).
DR-5	Every underwriting decision MUST retain its complete input set, so the decision can be recomputed and explained years later.
DR-6	Policy values MUST be versioned. A decision MUST record which policy version governed it.
DR-7	Personal data MUST be classified, access-controlled and retained per the retention schedule; deletion requests MUST be honoured except where records are required by law or regulation.
DR-8	The system MUST NOT store any tax identification number, EBM device identifier, or tax-authority credential. Existing columns MUST be dropped.

The server is authoritative for actor, role, ownership, evidence, policy, price, funds and eligibility. Commands carry an operation identity and expected revision; retries return the same recorded result, while reuse with a different permitted body is rejected. Retain lookup for at least the longest created timer plus 24 hours: seven-day bids/listings require at least eight days. This does not authorize deletion of financial history.

SECTION 5

5. Business and note lifecycles

Source basis: S1, S3 sections 10.2 and 11.3-11.4. Source key and edition details are in section 18.

Stage	Required transition or boundary
Draft / submitted / audit	The Business supplies its request and evidence; underwriting, mandate, KYB and co-signature govern approval. Declines retain reasons and reusable profile/evidence history.
Approved / accepted offer	Reserve the full accepted borrower exposure once against one economic commitment identity. Acceptance is not disbursement.
Live / partly funded	Publish eligible terms. Track available units, checkout reservations and confirmed investor commitments separately. Never oversubscribe or turn an unpaid reservation into a transferable holding.
Fully funded	Target reached. This is distinct from payment dispatch, verified disbursement and issue. Neither Business nor investor has a unilateral cancellation action after full funding.
Pre-disbursement checks	Revalidate current policy, evidence, DSCR, room, restrictions, mandate and all conditions precedent. Before payment dispatch, failed checks cancel the unissued campaign, refund investor principal without fee and release exposure.
Payment pending / unknown	Keep the immutable provider intent and committed exposure. Reconcile the outcome before refunding or sending another payment. A timeout is not verified failure.
Disbursed / issued / repaying	A verified successful payment converts the same committed exposure to outstanding once and records immutable purchased terms and rights. Activate the disclosed schedule.
Unfunded expiry / withdrawal	At 30 elapsed days from going live, an incomplete campaign closes and refunds all committed principal with no fee. Before full funding, investors or the Business may cancel under the same deterministic refund rules.
Arrears / default / recovery	Trading freezes at day 1 past due. Apply the recovery calendar in section 10. Maturity, recovery and write-off retain complete history; a write-off or reserve shortfall is never fabricated repayment.

Primary checkout holds exact units, investor limit room and wallet cash for five minutes or until campaign expiry, whichever is earlier. No primary checkout survives the 30-day deadline. A replacement offer after failed closing is a separate unaccepted offer and new campaign with fresh investment decisions; investors are not silently moved to changed terms.

Monthly reports progress through drafting, submitted, pending audit, co-signed and published; dispute and SLA states preserve history. Published reports are immutable and corrections are linked amendments. Audit Partners move from verification, engagement signing and biometric/device binding to Active, with suspension, yield holds, reinstatement or termination recorded separately.

SECTION 6

6. Underwriting and borrower eligibility

Source basis: S1, S2 UW-R01-UW-R07, S3 sections 3, 8.2, 8.4, 10.1 and 11.2. Source key and edition details are in section 18.

ID	Requirement
BR-10	Compute capacity from verified cash flow and test the original requested principal first. An initial exact DSCR below 1.25 is rejected without resizing; every final standard offer must achieve at least 1.50.
BR-11	A note MUST NOT be listed for more than the issuer's computed capacity at the time of listing.
BR-12	Deduct evidenced existing debt service and owner drawings once. Enforce borrower-wide external and Rozine principal exposure, including the full accepted/primary-listed undisbursed commitment without double counting.
BR-13	Use the exact mean of 36 verified monthly NOCF observations for a first-time borrower or 12 for an eligible repeat borrower. Preserve genuine seasonal peaks, zero and negative months; no automatic volatility trimming or gap filling.
BR-14	Original-request DSCR below 1.25: decline without a smaller offer. From 1.25 to below 1.50: reduce principal until the final exact standard DSCR is at least 1.50. All history, exposure, rating, co-signature, KYB and authority gates also apply.
BR-15	First-time applicants require 36 months of audited history. The repeat-only 12-month track requires the original 36-month baseline, one fully settled Rozine note with zero late payments, all unmonitored gaps audited, and the additional monthly safeguards in section 6.
BR-16	A declined business MUST retain its profile, continue to be re-scored as new statements arrive, and be re-eligible automatically without reapplying from zero.
BR-17	The MVP permits no override of DSCR, exposure, pricing, evidence, KYC, segregation or ledger-integrity gates, including by Superadmin. Operational exceptions are attributable and cannot waive these invariants.

Evidence and deductions

Rule	Current consolidated requirement
Coverage and freshness	All declared active bank/MoMo rails must reconcile. Audited cash/POS is supplementary and requires manual verification where it changes cash flow. Use complete Kigali calendar months; latest complete month no more than 45 days stale at submission, calculation, offer and issue.
First-time / repeat	36 audited monthly observations for first-time applicants; eligible repeats use 12 consecutive audited months with their original 36-month baseline and a fully settled, never-late prior Rozine note. Audit every unmonitored gap; no short-history annualization.
NOCF	Verified operating inflow less verified operating outflow per month. Take the exact mean of the selected window without trimming seasonal peaks or clamping negative observations.

Rule	Current consolidated requirement
Owner drawings	Deduct the greater of verified-window monthly mean and evidenced recurring commitment. Exclude salary already in OPEX; exclude evidenced one-off draws with board/shareholder resolution and net same-period returned draws. Internal transfers are not drawings. Missing evidence is unavailable, not zero.
Existing debt service	Deduct the greater of the historical monthly mean and the largest total contractual monthly obligation during the proposed tenor. The requested new loan is not existing debt service.
Exposure	Limit = min(35% of verified trailing-12-month revenue, RWF 100M). Count external and Rozine outstanding principal plus full accepted/primary-listed undisbursed commitments once. Future unaccrued return is handled in debt service, not principal exposure.
Request and offer range	Original request must be RWF 3M-100M. Final offer is at or below request, verified capacity and remaining exposure room. Reject raw capacity/room below RWF 3M before rounding; no forced upsizing.

Authoritative calculation order

1. Resolve verified evidence, rating, rate, original request and tenor. Missing/conflicting inputs produce an evidence-required result, not a numeric offer.
2. Build the requested schedule. $\text{Return} = \text{half-up}(\text{principal} \times \text{total-return fraction})$; $\text{total owed} = \text{principal} + \text{return}$. $\text{DSCR} = \text{CFADS} \times \text{tenor} / \text{total owed}$, compared exactly.
3. Reject the original request when $\text{DSCR} < 1.25$; do not solve a smaller offer in that case.
4. For a passing request, $\text{raw standard capacity} = (\text{CFADS} / 1.50 \times \text{tenor}) / (1 + \text{total-return fraction})$. Apply request, exposure and RWF 100M caps.
5. Round the eligible candidate down to the nearest RWF 5,000 before acceptance. Rebuild the schedule and recheck exact $\text{DSCR} \geq 1.50$, RWF 3M floor and every cap.
6. Revalidate all relevant revisions and exposure atomically; any lower accepted amount is recomputed and remains subject to the floor and all gates.

Additional repeat-track safeguards

Use the corresponding month from the latest audited year with no assumed growth. Cap projected NOCF at the lower of that month's observed NOCF and 1.2 times the 12-month median revenue, preserving negative values. Deduct owner drawings once and the greater of mean debt service or that month's contractual existing debt. Every projected month must cover its actual new scheduled payment at $\text{DSCR} \geq 1.35$. Select the largest eligible RWF 5,000 multiple satisfying these monthly checks and the final standard 1.50 target; otherwise decline. Enforced bank standing orders or locked MoMo collection arrangements require actual provider capability.

Worked illustration - calculation, not a credit offer

Input / result	Illustration
Assumptions	Monthly CFADS RWF 3M; requested principal RWF 12M; six months; 12.1% flat return; sufficient evidenced room and all other gates assumed satisfied.
Initial request	Return RWF 1,452,000; total RWF 13,452,000; initial DSCR about 1.338, which passes 1.25 but requires downsizing.

Input / result	Illustration
Capacity / grid offer	Nearest-franc DSCR-safe capacity RWF 10,704,728. The MVP grid offer is RWF 10,700,000 = 2,140 units.
Issued-schedule illustration	Return RWF 1,294,700; total RWF 11,994,700. First five total payments RWF 1,999,117, last RWF 1,999,115; exact final DSCR exceeds 1.50.

SECTION 7

7. Pricing, rating and computation

Source basis: S1, S3 sections 8.4 and 11.2, S4 Appendix A where unchanged. Source key and edition details are in section 18.

ID	Requirement
BR-20	Permitted new-note tenors are exactly 3, 4, 5 and 6 whole months.
BR-21	Present contractual return as the flat total return for the complete term, not as an annual rate. This is a product-presentation requirement; external legal review must confirm applicable pricing and disclosure obligations before live use.
BR-22	Total return MUST be at least 10% and at most 15% of principal, on every note, at every tenor, without exception.
BR-23	Total return MUST be a function of rating and tenor within those bounds, and MUST be deterministic and explainable.
BR-24	Disclose the complete monthly principal/return schedule before commitment. Use equal rounded total payments for the first T-1 instalments and a final residual so that all payments sum exactly to principal plus return.
BR-25	Early repayment MUST NOT reduce the total return owed to investors.
BR-26	The business MUST see the total cost of capital in francs, and the investor MUST see the total amount returned in francs, before committing.
BR-27	One primary unit represents RWF 5,000 principal; one unit is the minimum primary investment. Round a newly sized offer down to this grid before acceptance and recheck all safeguards.
BR-28	A listing MUST expire 30 days after going live if not fully funded; committed funds MUST be returned in full with no fee.

Pricing = half-up(clamp($10 + (5 - \text{published rating}) \times 1.6 + \text{term premium}$, 10, 15), one decimal). Premiums are exact percentage-point fractions: 3 months = 0; 4 = $\frac{1}{6}$; 5 = $\frac{1}{3}$; 6 = $\frac{1}{2}$. Do not pre-round the fractions. At rating 5.0 the rates are 10.0%, 10.2%, 10.3% and 10.5% respectively.

ID	Requirement
BR-30	The platform MUST publish exactly one measure of business quality. Any second competing score is prohibited.

ID	Requirement
BR-31	The rating MUST be expressed on a 0.0-5.0 scale with one decimal place, everywhere, in every app including Admin and Auditor.
BR-32	Bands MUST be: Strong ≥ 4.0 ; Stable ≥ 3.0 ; Weak ≥ 2.0 ; Distressed < 2.0 . Band boundaries MUST fall on whole numbers.
BR-33	Presentation MUST lead with the band word, support it with the numeric rating, and reinforce with the band colour.
BR-34	"Stable" MUST be presented as the healthy default, never as a warning state.
BR-35	A business rated Distressed MUST NOT be listable. Its existing notes enter active monitoring.
BR-36	The rating MUST be recomputed on every verified monthly report and on any material event.
BR-37	The rating at time of issue MUST be recorded immutably on the note; the live rating MUST also be shown to holders.

Published rating = $\text{clamp}(\text{EngineScore} / 20, 0, 5)$, rounded half-up to one decimal. EngineScore and components remain internal to authorized underwriting/Admin replay. The retained six-factor scorecard weights are coverage 30%, CFADS margin 20%, NOCF stability 20%, positive-month consistency 10%, verified-history depth 5%, and Rozine conduct 15%. The 36/eligible-12-month eligibility policy supersedes older short-history eligibility wording.

Internal factor	Retained scorecard normalization
Common functions	$\text{up}(x,a,b) = 100 \times \text{clamp}((x-a)/(b-a), 0, 1)$; down = $100 - \text{up}$.
Coverage / margin	Coverage = $\text{period inflow} / (\text{period outflow} + \text{period debt service})$; score $\text{up}(1.00, 1.50)$. Margin = $\text{CFADS} / \text{average verified monthly operating inflow}$; score $\text{up}(0.05, 0.25)$.
Stability / consistency	Relative MAD = $\text{median absolute deviation of monthly NOCF} / \max(\text{abs}(\text{median NOCF}), \text{RWF } 1)$; score $\text{down}(0.10, 0.60)$. Positive-month fraction score $\text{up}(0.50, 1.00)$.
History / conduct	History score $\text{up}(\text{complete verified months}, 6, 18)$. Conduct = 70% on-time-instalment score + 30% on-time-report score; no Rozine history receives neutral 50.
Adverse caps / missing data	An unresolved post-grace arrears/reporting breach caps EngineScore at 58; default or ≥ 30 DPD caps it at 38. Worst cap wins. Missing mandatory evidence or invalid denominator yields Unrated/unavailable, not a zero score or offer.

Rounding and owned cash-flow rights

ID	Requirement
FR-700	Rounding MUST be applied consistently and specified per computation; the sum of instalments MUST exactly equal principal plus total return, with any residual applied to the final instalment.
FR-701	Every computed figure shown to a user MUST be traceable to its inputs and reproducible on demand by Admin.

ID	Requirement
FR-702	Where a computation depends on a policy value, the governing policy version MUST be recorded with the result.

Keep money and decision ratios exact; no binary floating-point decisions. Round monetary results half-up to whole RWF only at their defined boundary. Preserve fixed unit ordinals at issue. Allocate each instalment principal/return component by floor shares plus residual francs, carrying a cyclic remainder cursor across instalments separately for principal and return. Every unit receives exactly RWF 5,000 principal over the full schedule. Transfers do not reset cursors or re-round purchased rights.

Coverage is distinct from DSCR. Invalid denominators yield unavailable values with reasons. Health, payment standing, disputes and account restrictions are separate facts, not competing public ratings. A numeric probability of default requires a separately validated calibration; the launch state is null / NOT_CALIBRATED.

SECTION 8

8. Money, wallets, fees and repayments

Source basis: S1, S3 sections 8.5, 10.3 and 11.1-11.4. Source key and edition details are in section 18.

ID	Requirement
BR-60	Investor funds MUST be held in segregated accounts and MUST NOT be commingled with Rozine operating funds at any time.
BR-61	The selected pilot design requires company/shareholder capital to cash-back 100% of principal promised reserve protection, including new protected commitments before acceptance. Actual funding, custody, payout authority and external clearance must be evidenced; no unsupported capital-protection claim or guaranteed future return is permitted. This expressly amends the older blanket reserve prohibition.
BR-62	MVP listing fee: RWF 0, explicitly waived. Borrower service fee: 2% of principal/contractual return actually repaid, excluding fees and penalties. Investor payout fee: 1% of actual contractual payout. Secondary: 0.35% buyer and 0.35% seller per settled gross fill. The separately approved overdue-principal penalty is specified in section 10; no hidden surcharge.
BR-63	25% of every service fee collected MUST be routed to the stewarding Audit Partner.
BR-64	All fees MUST be disclosed in francs before the user commits to the action that incurs them.
BR-65	Every movement of value MUST produce balanced double-entry ledger records. Reversals MUST be posted as new compensating entries referencing the original.
BR-66	Disbursement MUST occur only after the note is fully funded and all conditions precedent are satisfied.
BR-67	Allocate reconciled repayments using the immutable record-date component ownership and unpaid entitlements. Apply the largest-remainder whole-franc rule and preserve exact unit rights; no holder receives more than owed.

Charge	Basis and treatment
Listing	RWF 0 for the MVP; issue a zero-fee disclosure/receipt. No accrued hidden listing debt.
Borrower service	2% of principal and contractual return actually repaid, excluding fees/penalties; an additional borrower liability that cannot reduce investor principal.
Investor payout	1% of actual contractual payout, half-up to whole RWF.
Audit Partner share	25% of service fees actually collected for the eligible steward, payable monthly subject to attributed SLA holds. Uncollected fees are not earnings paid.
Secondary execution	0.35% each side on settled gross, half-up per fill; no extra minimum fee or old fee stacking.
Penalty	2% per year, simple on eligible overdue principal only; section 10 gives grace, accrual and allocation. Collected penalties have a separate platform-revenue ledger.
Tax and surcharges	Quoted fees remain gross-inclusive with no undisclosed surcharge. No listing-fee tax is charged when no listing fee is collected; this is not a tax-exemption claim. Actual tax classification/accounting needs evidence.

Investor transaction capacity

Unverified or incomplete KYC/KYB has zero transaction capacity. Verified individuals and legal entities initially share product caps: gross transaction RWF 1M; per Note the lower of RWF 1M and 20% of original issued principal; per Business RWF 2M; aggregate RWF 5M. These are selected product defaults, not statutory thresholds. Apply any evidenced lower external limit before live use.

Measure outstanding principal plus principal covered by pending primary commitments/secondary reservations. Reserve room atomically, convert it once on confirmation, release once on cancellation and reduce it on principal repayment. Wallet cash must additionally cover fees. Self/connected-Business transactions remain prohibited.

Schedule, record date and partial receipts

Use the verified disbursement date in Africa/Kigali as the original monthly anchor; clamp each month to its last day without drifting the next month's anchor. Payment is due through the disclosed local date, with no weekend/holiday shift. DPD 0 is the due date; the following local date is DPD 1. The ownership record cutoff is 00:00 Africa/Kigali every day, including weekends and holidays.

Apply reconciled receipts to oldest overdue principal, then due contractual return, then penalties. Distribute each frozen component proportionally to unpaid entitlements using floors and largest fractional remainders, ties by immutable unit ordinal; never overpay. Do not split or merge provider receipt identities to manipulate rounding. Excess is unapplied borrower cash pending authorized disposition. Authorized early repayment does not reduce the original flat return.

SECTION 9

9. Secondary trading and settlement

Source basis: S1, S2 SEC-R01-SEC-R10, S3 sections 6 and 11, S8 conduct categories. Source key and edition details are in section 18.

ID	Requirement
BR-70	Only fully settled holdings in notes that are Repaying and current MAY be listed for sale.
BR-71	A note at 1+ days past due, or in Arrears, Default or Disputed state, cannot be listed, matched or settled on the secondary market.
BR-72	The buyer MUST see the note's current rating, health status, latest published report and remaining schedule before purchase.
BR-73	Settlement MUST be atomic: units and funds transfer together or not at all.
BR-74	Admin MUST be able to halt the secondary market globally or per note, immediately.
BR-75	Rozine does not act as principal or market maker in ordinary secondary trading. Sellers choose asks within the approved floor and ceiling; matching executes at the seller ask. The separately selected recovery-reserve buyout/payout is governed by section 10, not ordinary market making.

Rule	Current requirement
Eligibility	Fully settled holdings in current Repaying notes only; no 1+ DPD, Arrears, Default, Disputed, halted or otherwise restricted transaction. No separate four-month-to-maturity cutoff.
Listings and bids	Secondary listings last seven days. Buyer bids immediately reserve funded wallet cash and last seven days unless filled/cancelled. Aggregate volume at bid prices is visible.
Interactive checkout	Five-minute reservation of exact selected whole units and gross plus fee. Non-overlapping reservations may coexist. An existing reservation survives only normal listing expiry, never a trading ban or its own deadline.
Price band	Gross must be at least 70% of the transferred units' unpaid principal and no more than their remaining transferable gross payouts. Exclude paid/vested seller rights. Compare bounds exactly; no rounding a failing price into the band.
Execution minimum	At least one whole unit AND RWF 1,000 gross per execution. No forced residual buyout. A seller may bundle own unencumbered units of the same Note; no cross-note or cross-seller bundle.
Matching	Highest funded bid first, then earlier server admission sequence. Select lowest eligible ask, then earlier sequence; execute at seller ask even if the bid is higher. Automatic matches do not create an extra checkout wait.
Small residuals	A candidate under RWF 1,000 is skipped for that bid; scan the next eligible listing, otherwise wait. Do not automatically combine separate listings. Residual units may be retained for repayments or combined into an eligible seller listing.

Rule	Current requirement
Cancellation / expiry	Seller can cancel only unreserved quantity; unmatched bid quantity can be cancelled. Release cash/units once. Normal listing expiry closes new admission; completion of an existing reservation never reopens it.
Conduct	Deny self/same-beneficial-owner trades and double sales. Prohibited conduct covers fabricated wash/self/collusive activity; deceptive orders/reservations; material falsehood or concealment; misuse of confidential information/privileged access; identity/account fraud or ownership-control evasion; and illicit-funds activity. Uncalibrated frequency, cancellation, discount or reciprocal-trading flags are review-only.
Settlement / cutoff	Funds, unit rights, fees, ledger, command result and durable events commit atomically. Serialize note eligibility, record-date entitlement markers and settlement so each race has one committed result.

Fee example

Gross RWF	Buyer fee	Buyer debit	Seller fee	Seller credit
1,000	4	1,004	4	996
10,000	35	10,035	35	9,965
20,000	70	20,070	70	19,930

For a funded bid of q units at whole-franc limit p , reserve $q \times (p + \text{ceil}(p \times 35 / 10,000))$. Each actual fill uses the confirmed half-up gross fee and atomically releases price/fee improvement; retain only the unmatched maximum reserve. Filled, cancelled, expired or ineligible terminal states release all remaining reserve once. Show this as the maximum payable including fees, and show actual cost on receipts.

SECTION 10

10. Arrears, recovery and reserve design

Source basis: S2 recovery direction; S3 sections 8.5, 10.3 and 11.4. Source key and edition details are in section 18.

Period	Required action
Day 1 onwards	Freeze secondary listing/trading immediately. Cash arrears, reports, disputes, account cases and reserve payout remain separate states.
Days 1-7	Technical-clearing / grace stage: payment retries and daily SMS/email to the borrower. Secondary trading remains frozen. No penalty during each principal item's first seven overdue calendar days.
Days 8-21	Recovery-team outreach, simple penalty accrual, structured daily repayment targets and weekly investor portal updates.

Period	Required action
Days 22-30	Formal-default preparation. If uncured through day 30, apply Default at the start of DPD 31 after evaluating reconciled receipts effective before that boundary; initiate legal recovery, call applicable guarantees/collateral and file CRB default reports through evidenced arrangements.
Days 31-45	Execute legal liquidation or the selected reserve buyout/payout mechanism for final investor capital resolution by day 45. Prepare reserve payout in days 31-44. Day 45 is not merely a progress-report milestone; a shortfall is an incident, not a paid state.

Penalty and daily recovery targets

Penalty = eligible overdue principal $\times 2 / (100 \times \text{days in the calendar year})$ per chargeable day: 365 normally, 366 in leap years. Accrue from the eighth overdue day, without backdating or compounding. Use the remaining eligible principal after reconciled receipts effective that day. Never penalize contractual return, fees or prior penalties. Stop when that principal is repaid, written off or subject to an applicable legal restriction; passing day 21 alone does not stop accrual.

Retain exact fractional accrual. Post only the difference between the new cumulative half-up whole-RWF total and the previously posted total. Correct verified backdated receipts with new attributed compensating entries. During days 8-21, daily target = remaining arrears / (22 - current DPD), half-up and capped at arrears, recomputed after receipts and subject to affordability review. This target does not rewrite the investor schedule.

Selected reserve requirement and unresolved real-world evidence

The pilot reserve design uses company/shareholder capital to cash-back 100% of outstanding principal promised protection plus new protected commitments before acceptance. Investor wallet balances and expected fees do not fund it. Keep reserve money segregated under documented custody/payout authority, reconcile daily and require two distinct authorized approvers. Pay protected principal less principal already recovered, without guaranteeing future return or penalties; document the treatment of subsequent recoveries.

Insufficient or unverified backing blocks new protected commitments. The source record does not supply actual reserve capital, bank/custody documents, payout authority or completed external clearance. Protection may be described only within evidenced and enforceable scope. Required guarantees/collateral or CRB access are not created by mentioning them in this BRS. This is the explicit amendment to the July blanket no-protection wording, not a claim that funded protection already operates.

SECTION 11

11. Account restrictions and customer remedies

Source basis: S1 CR-8; S2 hold direction; S3 sections 10.5 and 11.4. Source key and edition details are in section 18.

Control	Required behavior
Temporary hold triggers	Verified account compromise; authenticated provider fraud alert; or the combination of a new payout destination, credential reset within 24 hours and withdrawal $\geq$ RWF 100,000 representing $\geq$ 80% of available wallet funds.
Hold scope	Block withdrawals, new primary commitments and secondary buying/selling. Cancel affected unsettled reservations/bids once and release to the owner's restricted balance; cancel affected seller listings. Preserve completed trades. Deposits, reconciled repayments and owned credits continue.
Confirmation	An unconfirmed automatic hold expires after 24 elapsed hours. Confirmation must occur strictly before expiry and never restarts the original clock.
Review limit	Five business days from the original flag, at its original local time on the fifth eligible date. Count Monday-Friday after the flag date, excluding officially observed Rwanda public holidays; require a sourced/versioned calendar.
Release	At the review limit, absent a separate formal finding, release that hold. Manual release is by Compliance Officer OR Legal Counsel. Other independent cases/restrictions survive; no automatic withdrawal or relisting.
Formal finding	Separate evidenced Compliance/Legal decision: 30-calendar-day default expiry, review every five business days, no automatic renewal. A binding external order uses its actual scope and duration.
Notice and remedies	Notice within 24 hours unless a recorded legal prohibition applies. Users can raise complaints and disputes, provide evidence and track a reasoned resolution with an auditable case history.
Cure	Cleared reconciled overdue principal/return clears only ordinary arrears. Default release needs recorded Compliance/Legal reconciliation. Unpaid penalties remain a separate receivable, not a new instalment-DPD clock.

Financial authority, Note eligibility and account restrictions are checked again at execution. Releasing one case cannot erase another, recreate cancelled bids or reverse a completed trade. Ordinary trading or cancellation frequency is review-only until an approved, evidenced trigger applies.

SECTION 12

12. Audit, reporting and evidence assurance

Source basis: S1, S3 sections 10.7 and 11.5. Source key and edition details are in section 18.

ID	Requirement
BR-40	No note MAY be listed without an Audit Partner co-signature on the originating verification.
BR-41	The monthly reporting window is the 1 st to the 7 th inclusive. Submission and co-signature MUST both occur within it.
BR-42	A report MUST NOT be published without a valid verification seal from an accredited, unexpired Audit Partner.
BR-43	Evidence photographs MUST be captured through the in-app camera with live geolocation. Gallery upload MUST be rejected.
BR-44	Captured geolocation MUST be cross-checked against the registered premises; a material discrepancy MUST flag the report for review.
BR-45	A published report MUST be immutable. Corrections MUST be issued as an amendment linked to the original, never as an edit.
BR-46	A missed reporting window flags the note and escalates. Freeze Audit Partner yield only where evidence attributes the SLA breach to that partner; missing Business inputs, outages or an unassigned job do not automatically establish partner fault.
BR-47	The business note and the auditor note are each limited to 100 characters; photographs are limited to five per party per report.
BR-48	Flash Audits MUST be randomly triggerable with a 24-hour completion requirement, and MUST be indistinguishable in advance from routine dispatch.
ID	Requirement
BR-50	Only a verified ICPAR member with a current practising certificate MAY be accredited or receive dispatch.
BR-51	Dispatch MUST be restricted to partners whose office is within 30 km of the business premises, subject to capacity.
BR-52	A partner MUST NOT exceed the configured concurrent-engagement cap.
BR-53	Assignments MUST rotate; a partner MUST NOT steward the same business indefinitely.
BR-54	A partner MUST NOT be assigned to a business with which a declared conflict of interest exists.
BR-55	Partner compensation is 25% of the service fee collected on notes they steward, payable monthly on satisfactory SLA performance.

ID	Requirement
BR-56	Licence expiry MUST automatically suspend dispatch eligibility without staff action.

Selected minimum operating policy

Area	MVP requirement
Procedure MVP-AUP-1	Verify rail inventory/originals; reconcile every selected month's balances/transactions; classify and deduplicate operating flows/draws/debt; verify baseline/gaps/exceptions and premises; reproduce underwriting; record findings/exceptions and co-sign/seal. Unexplained reconciliation tolerance is RWF 0. Actual professional engagement terms and performance require evidence.
Standing / dispatch	Documented manual ICPAR check no older than 30 days at dispatch/co-signature; deny expiry/revocation immediately. Coordinates verified within 365 days and after moves. Distance plus both uncertainty radii ≤ 30 km; at most three active engagements.
Selection / rotation	Prefer fewest active assignments, oldest last assignment, then stable partner ID. Maximum three consecutive reports for the same Business before rotation. Deny financial interests, owner/director/employee/adviser ties within 24 months and declared family/business conflicts. No eligible alternative goes to Audit Operations.
Job deadlines	Routine acceptance within four hours and visit within 48 hours of acceptance. Flash acceptance one hour and completion within 24 hours of original dispatch. Three automated dispatch attempts then operations; reassignment does not reset Flash deadlines.
Monthly reporting	Business input target day 3; complete report/co-signature due by day 7. Investigate fault before a partner yield freeze. Notes ≤ 100 characters each, at most five photos per party/report.
Seal and verification	JWS ES256 over a canonical report/manifest with SHA-256 evidence digests; organization-managed server key and hardware-bound device key. Server/device rotation defaults 90/180 days; revoke immediately on compromise. Preserve signing, revocation and amendment history. Public verification exposes only opaque report ID, digest, seal status and amendment links.
Device target	Android 12+ / iOS 16+, hardware-bound key, biometric unlock, in-app camera and accepted server integrity verdict. Unknown/unsupported capability denies governed capture. GPS accuracy worse than 100 m or premises discrepancy above 250 m requires review, not automatic trust.
Offline deadlines	Capture authorization 24 hours; upload deadline and maximum unacknowledged local retention seven days, both from server package issue. Acknowledged local copies: 24 hours from acknowledgement. Capture/upload must occur strictly before their respective cutoffs with current authority.
Upload / loss	Ten attempts per reconnect; backoff starts at 30 seconds and caps at 15 minutes, retaining original operation identity. Then visible attention required. Max 10 MiB/image and 50 MiB/package. Expiry creates recorded loss/recapture and crypto-shredding obligation; no false success or claim of an offline wipe.

Area	MVP requirement
Device replacement	Revoke the old key/packages, restore committed evidence only, enroll the new device and recapture missing material. No private-key cloning. Reboot/untrusted elapsed time requires online refresh before new capture.

Receipt of an upload is not approval or publication. Recheck assignment, professional status, device/key authority, hashes, deadlines and procedure decisions before acceptance. Cryptographic integrity does not prove that a scene or GPS reading is truthful. Required physical-device/offline/dwell assurance is separate from a software specification or simulated run.

SECTION 13

13. Application capability catalogue

Source basis: S1 FR-100-FR-607, updated by S3. Source key and edition details are in section 18.

These are full-product capabilities. MVP packaging and later-channel boundaries are stated in section 2; no deferred channel silently removes a mandatory financial, evidence or supervisory control.

Investor application

ID	Capability	Requirement
FR-100	Onboarding	Register, verify identity to the required KYC tier, accept terms and risk disclosure, and set up a wallet before any investment is permitted.
FR-101	Deal discovery	Browse live notes as a card deck with filters by sector, tenor, rating band and yield, and a curated ordering.
FR-102	Deal detail	View verified financials, rating and its basis, funding progress, tenor, total return, repayment schedule, use of funds, business photographs, and the Audit Partner's identity and licence.
FR-103	Evidence access	View authorized published report summaries, disclosed verified figures and seal status. Raw statements, bank identifiers and case evidence are not public; access to sensitive supporting evidence follows the audience policy in section 3.
FR-104	Investment	Select units, see the exact amount invested and amount returned in francs, review all fees, and confirm. Minimum RWF 5,000.
FR-105	Watchlist&follow	Save notes and follow businesses to be alerted to new raises.
FR-106	Portfolio	View total value, invested principal, projected return, positions, upcoming payouts, diversification by sector, rating mix, and idle wallet balance.
FR-107	Holding detail	Per position: schedule, payouts received and outstanding, current rating and health, arrears warnings, and the report history.
FR-108	Secondary market	List a holding for sale at a chosen price, browse and purchase others' listings, and track order state to settlement.

ID	Capability	Requirement
FR-109	Wallet	Deposit, withdraw, view balance and a complete transaction history with per-transaction detail.
FR-110	Notifications	Receive and review alerts for new reports, payouts, funding milestones, arrears, disputes and platform notices.
FR-111	Education	Access lessons and FAQs explaining the rating, the fixed-return structure, fees, risk and the secondary market.
FR-112	Profile	Manage personal information, KYC documents, bank and MoMo details, security settings, notification preferences, statements and support.
FR-113	Risk disclosure	Present unavoidable, plain-language risk disclosure at first investment and on every deal page. Capital loss MUST be stated explicitly.

Business application

ID	Capability	Requirement
FR-200	Onboarding&KYB	Register the business, capture registration details, owner identity, premises geolocation and contact; complete KYB to the required tier. No tax identifier MAY be requested.
FR-201	Statement ingest	Upload bank and MoMo statements as PDF. Accepted evidence types: MoMo statement, bank statement, audited cash transactions, POS data.
FR-202	Parsing feedback	Show parsed inflow, outflow and derived series for confirmation, with the ability to flag a parsing error for review.
FR-203	Capacity&rating	Display computed capacity, rating with band, indicative total return by tenor, and a plain-language explanation of each.
FR-204	Create a raise	Enter original requested principal within RWF 3M-100M and choose 3/4/5/6 months. Receive the eligible computed offer at or below the request, see any grid reduction and exact cost/schedule, then accept through the effective mandate.
FR-205	Submission&tracking	Submit for underwriting and track state through audit, approval, listing, funding and disbursement, with reasons shown at every step.
FR-206	Monthly report	Within the 1 st-7th window: upload the period statement, add a note (<=100 characters) and up to five photographs, and submit for Audit Partner co-signature.
FR-207	Audit coordination	See the assigned Audit Partner, expected visit, co-signature state, and any outstanding request from the partner.
FR-208	Repayments	View the full schedule, pay an instalment, see fees applied, and receive arrears warnings before and after a due date.

ID	Capability	Requirement
FR-209	Standing&health	See current rating, health status, reporting compliance history and the specific factors improving or damaging standing.
FR-210	Dispute	Raise a dispute against a report or an audit finding, with reason and evidence, and track resolution.
FR-211	Wallet	Receive disbursement, hold balance, withdraw to a registered bank or MoMo account, and view full transaction history.
FR-212	Education	Access guidance on improving rating, managing cash flow, preparing for an audit visit, and understanding fees.
FR-213	Decline handling	On decline, present the computed figures, the specific shortfall, and the concrete conditions under which the business would qualify.

Auditor application

ID	Capability	Requirement
FR-300	Accreditation	Register, submit ICPAR member ID and practising certificate, complete biometric binding, and await verification. Dispatch MUST be blocked until Active.
FR-301	Engagement signing	Review and execute the master services agreement and ISRS 4400 agreed-upon-procedures terms inside the app, with a retained signed record.
FR-302	Job queue	Receive dispatched jobs within the 30 km radius, with business detail, location, deadline and job type (routine or Flash Audit).
FR-303	Flash Audit timer	Display a live 24-hour countdown for Flash Audits with escalating urgency and breach consequence stated.
FR-304	On-site capture	Capture geo-tagged photographs through the in-app camera only. Gallery selection MUST be unavailable.
FR-305	Procedures checklist	Work through the agreed-upon procedures as a structured checklist, recording findings against each.
FR-306	Statement verification	Review the parsed figures against source documents and on-site observation; confirm, correct or reject with reason.
FR-307	Co-signature	Apply the verification seal, binding auditor identity, licence, report contents and timestamp. Seal MUST be irreversible.
FR-308	Portfolio	View all stewarded businesses, their reporting history, health and upcoming obligations.
FR-309	Earnings	See yield share accrued, paid and frozen, per note and in total, with the basis of each calculation.

ID	Capability	Requirement
FR-310	Academy	Complete continuing-education modules covering the platform's metrics, formulas, procedures and ethics, with completion recorded.
FR-311	Offline tolerance	Complete governed field capture within the authorized offline package/device limits. Synchronize with acknowledged receipt, visible retry states and the loss/recapture treatment in section 12. Never silently discard evidence or claim an unacknowledged upload succeeded.
FR-312	Conflict declaration	Declare a conflict of interest and decline a job, with the declaration recorded and the job re-dispatched.

Admin and supervisor

ID	Capability	Requirement
FR-400	Command dashboard	Present live platform state: capital deployed, active notes, funding health, attention items requiring action, and quick commands.
FR-401	Business directory	Inspect rating, capacity, notes, reports, standing and history; manage authorized KYB/restriction cases. No MVP capacity or financial-integrity override.
FR-402	Investor directory	Search, filter and inspect every investor; view KYC state, wallet, holdings, orders and activity; freeze or adjust tier.
FR-403	Auditor network	Verify current professional standing, inspect radius/capacity/load, reassign within policy, and manage accreditation/yield with evidence. A manual standing check is allowed; overriding expiry, revocation or conflicts is not.
FR-404	Application queue	Review submitted applications with full underwriting basis; approve, decline or return with reason; enforce tier rules.
FR-405	Note management	Inspect any note across its entire lifecycle; force state transitions where legitimate, with reason and log.
FR-406	Monthly audit compliance	Board of every report by state (Drafting, Pending audit, Published, SLA breached, Disputed); open any report in a detail panel with full evidence; escalate, reassign, freeze yield or resolve.
FR-407	Secondary market	Monitor orders and settlement; halt or resume trading globally or per note; cancel an order with reason.
FR-408	Treasury&ledger	View the full double-entry ledger; reconcile segregated accounts; post manual entries and reversals under dual approval; monitor fee revenue by line.
FR-409	Risk and distress	Show outstanding principal, DPD, risk/standing facts and why flagged. Probability of default remains null / NOT_CALIBRATED, never a fabricated zero or public score; actions remain subject to authority and workflow checks.
FR-410	Compliance	Case management for AML alerts and investigations; document review; freeze powers; suspicious-activity recording.

ID	Capability	Requirement
FR-411	Policy engine	Amend every configurable parameter - DSCR thresholds, tenor set, return floor and ceiling, fee rates, yield share, dispatch radius, concurrency caps, SLA windows, exposure limits - with versioning and attribution.
FR-412	App control	Per-app feature flags, maintenance mode and forced-update controls for Investor, Business, Auditor and Pulse.
FR-413	Staff&roles	Create, modify and disable staff accounts; assign roles; review each role's permission set.
FR-414	Audit trail	Complete, immutable, searchable record of every administrative action with actor, target, action, reason and timestamp.
FR-415	Act-as	View any user's live application state read-only, clearly indicated and logged.
FR-416	Messaging	Broadcast to a targeted audience across apps; manage templates and automated notification rules.
FR-417	Disputes	Intake, investigate and resolve disputes between businesses and Audit Partners, with the outcome recorded on the report.
FR-418	Supervisory reporting	Generate and export the reports required by the regulator, and support a read-only supervisor seat.

Pulse

ID	Requirement
BR-80	Pulse MUST NOT collect funds, issue any instrument, or create any binding obligation on either party.
BR-81	Every Pulse surface MUST carry a clear non-binding demand-simulation disclosure.
BR-82	A pre-qualification figure MUST be computed by the same engine used in production, and MUST be labelled indicative and subject to full verification.
BR-83	Registrations MUST capture name, one contact method (phone or email), province and district, and MUST issue a sequence number.
BR-84	Pulse counters displayed publicly MUST reflect real registration activity, never fabricated figures.

ID	Capability	Requirement
FR-500	Investor pledge	Set an intended amount, see the projected total return, register name, contact method, province and district, and receive a sequence number.
FR-501	Business pre-qualification	Use the shared current underwriting engine and required history/evidence to produce an indicative result. One uploaded document is sufficient only if it actually covers the required history; incomplete evidence yields no fabricated numeric offer. Full verification remains necessary.

ID	Capability	Requirement
FR-502	Shareable pass	Issue a downloadable and shareable pass carrying the registrant's name, figure and sequence number, for organic distribution.
FR-503	Live counters	Display real, live aggregates of registration activity on both sides.
FR-504	Sample deals	Show a rotating sample of pre-qualified businesses with term, yield, rating and the amount a pledger would earn.
FR-505	Disclosure	State prominently that this is a non-binding demand simulation and that no funds are collected or issued.

Investor Pulse illustrations use 10%-15% gross flat-return endpoints, rounded half-up to whole RWF, with non-binding, fee and risk disclosures. No fixed 13% promise, collected funds or net-return claim without a real schedule. Business Pulse uses current 36/eligible-12-month evidence and 1.25/1.50 rules; the obsolete short-history and 1.00/1.25 eligibility presentation must not be reused. Sample deals and public counters require genuine, consented, current source data.

Shared core

ID	Capability	Requirement
FR-600	Single source of truth	All apps MUST read and write the same core. No app MAY hold private authoritative state.
FR-601	Live propagation	A committed change MUST be reflected across every affected app without a manual refresh.
FR-602	Deterministic computation	Capacity, DSCR, rating, pricing, schedules, dispatch and fee calculations MUST be reproducible from stored inputs.
FR-603	Idempotency	Every financial operation MUST be idempotent; a retried request MUST NOT double-post.
FR-604	Event log	Every state transition MUST emit a durable event usable for notification, analytics and reconstruction.
FR-605	Policy as data	All thresholds and rates MUST be configurable data, versioned and attributed - never hard-coded.
FR-606	Expiry engine	Enforce the distinct 30-day primary, seven-day secondary listing/bid and five-minute checkout deadlines, including their different expiry and refund rules.
FR-607	Scheduler	Open and close the monthly reporting window, trigger dispatch, escalate SLA breaches, release or freeze yield, and drive repayment due dates.

SECTION 14

14. Security, quality and retention

Source basis: S1 NFR-1-NFR-14; S3 sections 4 and 11.5. Source key and edition details are in section 18.

ID	Capability	Requirement
NFR-1	Availability	Core transactional services MUST target high availability, with planned maintenance announced in advance and surfaced through app maintenance mode.
NFR-2	Data integrity	No committed financial transaction MAY be lost or double-applied under any failure mode. Reconciliation MUST detect and report any imbalance.
NFR-3	Security	Encryption in transit and at rest; managed key rotation; least-privilege access; secrets never in source; regular penetration testing.
NFR-4	Authentication	Strong authentication for all parties; multi-factor for staff and Audit Partners; biometric binding for Audit Partners; session expiry and revocation.
NFR-5	Auditability	Every state change MUST be attributable to an actor and reconstructible in sequence.
NFR-6	Performance	Interactive screens MUST remain responsive on mid-range Android devices over intermittent mobile networks; statement parsing MAY be asynchronous with clear progress feedback.
NFR-7	Resilience	Governed field capture works offline only within the authorized device/package/time limits. Retry and reconcile uploads; expiry or lost evidence creates a recorded recapture/loss case rather than false success.
NFR-8	Accessibility	Adequate contrast, legible minimum type sizes, and touch targets no smaller than 44 px.
NFR-9	Localisation	Architecture MUST support Kinyarwanda, English and French; all user-facing strings externalised.
NFR-10	Clarity	Financial figures MUST be shown in full francs with thousands separators where precision matters. No user-facing jargon without an inline explanation.
NFR-11	Scalability	The platform MUST scale to thousands of concurrent monthly audits without a proportional increase in Rozine operations headcount.
NFR-12	Recoverability	Backups MUST be automated, encrypted, geographically separated and restore-tested on a defined cycle.
NFR-13	Observability	Structured logging, metrics and alerting across all services, with dashboards for the platform KPIs.
NFR-14	Data residency	Personal and financial data MUST be stored in compliance with Rwandan data-protection requirements.

Required operational safeguards

Use least privilege, current role/mandate checks, MFA for privileged staff and Audit Partners, managed encryption/key rotation, session and device revocation, secure evidence access and immutable logs. Pending, confirmed, denied and stale command outcomes remain distinct. A client timeout must resolve through the original operation identity; no optimistic display of settled funds or retry with a fresh financial identity.

Provider callbacks require authentication, correlation and replay protection. Unknown or contradictory outcomes are reconciled. Separate deterministic test/provider fakes from live configuration; test results with a fake do not establish provider certification. Backups, restore drills, incident handling, reconciliation and independent security testing remain acceptance evidence.

Record class	Selected retention policy
Necessary financial, identity, signed-audit and supporting loan evidence	10 years after the later of final transaction and end of relationship. Preserve the original required 36-month baseline.
Unfunded rejected-application working copies	180 days unless separately required as retained evidence.
Ordinary operational logs	90 days.
Encrypted backup rotation	35 days; restored backups reapply the deletion register.
Legal holds / deletion	Recorded legal hold suspends deletion until release. Authorized purge/irreversible anonymization retains minimal deletion receipts. Purpose-limited retention does not authorize keeping all raw personal data indefinitely.

These are selected product/engineering retention defaults from the source baseline. Applicable legal, data-residency and cross-border authority must be evidenced for the actual deployment; this PDF does not certify legal compliance or direct deletion of existing records.

SECTION 15

15. Integrations and compliance requirements

Source basis: S1, S3 sections 10.8 and 11, S7. Source key and edition details are in section 18.

ID	Capability	Requirement
IR-1	Mobile money providers	Disbursement, collection, wallet funding and withdrawal.
IR-2	Commercial banks	Segregated account operation, settlement and reconciliation.
IR-3	Identity verification	Individual identity confirmation for KYC.
IR-4	Business registry	Confirmation of registration and ownership for KYB.
IR-5	ICPAR register	Verification of member ID, practising certificate and standing.
IR-6	Messaging providers	SMS, email and push delivery of notifications.
IR-7	Mapping/geocoding	Premises geolocation, dispatch radius and evidence cross-check.

ID	Capability	Requirement
IR-8	Supervisory reporting	Delivery of periodic returns to the regulator.

Additional dependency tracks include statement OCR/parsing, evidence storage, sanctions/PEP/AML screening, CRB debt/default reporting, independent security assurance, reserve custody/payout arrangements and qualified legal/CMA engagement. CRB is a debt-evidence/reporting track, not a substitute for KYC. Registry integration must avoid receiving or persisting prohibited tax identifiers.

ID	Requirement
CR-1	KYC and KYB MUST be completed and verified before any transaction is permitted, with tiered limits by verification level.
CR-2	AML transaction monitoring MUST run continuously, with case management, escalation and regulatory reporting.
CR-3	Sanctions and PEP screening MUST be performed at onboarding and periodically thereafter.
CR-4	Investor funds MUST be segregated and reconciled daily.
CR-5	Every listing MUST carry complete disclosure: verified financials, rating basis, all fees, tenor, schedule and explicit risk warning.
CR-6	Disclose capital-loss and liquidity risks. Any limited reserve protection must match evidenced capital, custody, scope and enforceable terms; future return is not guaranteed. Unsupported protection marketing is prohibited. The selected reserve design does not itself establish regulatory approval.
CR-7	Investment limits appropriate to investor category MUST be enforceable by policy.
CR-8	A documented complaints and dispute-resolution process MUST be available to all users and evidenced in the system.
CR-9	Records MUST be retained for the statutory period and be producible on regulatory request.
CR-10	Personal data processing MUST comply with Rwandan data-protection law, with lawful basis, consent capture and subject-rights handling.
CR-11	Audit Partner engagements MUST be performed under ISRS 4400 agreed-upon procedures with retained working papers.
CR-12	The platform MUST support a read-only supervisor seat providing live visibility of the operating state.
CR-13	Sandbox caps and conditions MUST be enforceable as policy values, without code change.

Provider acceptance boundary

For each provider, record permitted operations, data scope, agreement, authentication, result/error/callback shape, timeouts, idempotency, reversal/reconciliation semantics and certified environments. Payment intent, verified failure, verified success and unknown outcome are distinct. Never repeat a potentially successful payment with a new identity or refund money whose disposition remains unknown.

Product defaults, internal approvals and a passing surrogate do not constitute CMA admission, professional engagement, provider certification or external legal clearance. Sandbox caps and conditions must be representable as versioned policy and apply before real transactions. No live licence, engagement or approval is claimed by this edition.

SECTION 16

16. Acceptance and verification

Source basis: S1 AC-1-AC-12, S3 current defaults, S4 delivery gates. Source key and edition details are in section 18.

ID	Requirement
AC-1	A business can be onboarded, verified, statement-parsed, capacity-computed, co-signed, listed, funded, disbursed, serviced across a full schedule, and matured - end to end, on production rails.
AC-2	An investor can register, verify, fund a wallet, invest from RWF 5,000, receive a monthly verified report, receive scheduled payouts, sell on the secondary market, and withdraw.
AC-3	An Audit Partner can be accredited against the ICPAR register, sign engagement terms in-app, receive a dispatched job, complete an on-site capture offline, and apply a verification seal that publishes to holders.
AC-4	Admin can observe and command every authorized entity and action described in the application catalogue in section 13, with each action gated by current role/mandate and logged with a reason.
AC-5	Every entry point, including Admin, rejects disallowed tenors, rates, DSCR, evidence or exposure. Apply the 3/4/5/6-month set, 10-15% return, original-request 1.25 cutoff, final 1.50 target and RWF 5,000 offer grid without an MVP override.
AC-6	A missed reporting window automatically escalates, flags the note and notifies affected parties. Yield freeze follows evidenced partner fault and the governed resolution path.
AC-7	The ledger reconciles exactly: assets held equal obligations owed, across every account, every day.
AC-8	A regulator with a read-only seat can inspect the live operating state and reconstruct any historical decision from stored inputs.
AC-9	No surface in any app, or any stored record, contains a reference to RRA, EBM, TIN, tax sync or a tax compliance badge.
AC-10	Every app displays the rating identically: one word, one number out of five to one decimal, one colour.
AC-11	Pulse operates with no funds collected and no instrument issued, and its counters reflect real registrations.
AC-12	A penetration test and an independent security review are completed with no unresolved high-severity finding.

Amendment-specific acceptance evidence

Area	Required proof
Underwriting	36/12-month eligibility, missing/gap/stale evidence, seasonal/negative observations, exact 1.25 and 1.50 boundaries, repeat monthly 1.35 checks, exposure deduplication, no rounding up to the floor, RWF 5,000 grid and immutable policy replay.
Money / primary	Last units contested concurrently, cancel/confirm/expiry races, fee-free refunds, no refund during unknown payment outcome, verified callback replay and exact ledger/segregated-account reconciliation.
Secondary	Partial/concurrent reservations, funded bids, priority, ask execution, price-band edges, RWF 1,000 minimum, per-fill fee rounding, halt/hold/cutoff races and no duplicated funds or units.
Servicing / recovery	Month-end anchor, Kigali DPD, 365/366-day penalty arithmetic, backdated receipt compensation, partial allocation conservation, reserve backing checks, dual approval and day-45 shortfall handling.
Audit / restrictions	Licence/mandate revocation, capture/upload expiry, lost/replaced devices, truthful seal/amendment verification, conflict/rotation rules, attributed SLA holds, 24-hour/five-business-day deadlines and independent case scopes.
User experience / operations	All role journeys, responsive/accessibility/localization behavior, historical decision reconstruction, security review, recovery drills, provider certification and witnessed live lifecycle where required.

An MVP alpha proves an isolated end-to-end primary path. A release candidate requires applicable pre-production tests and explicit production surrogates, including atomic secondary trading. Live MVP acceptance additionally requires actual provider/regulatory authorization and witnessed real-rail operation. AC-1 and other live criteria cannot be closed by a build, a fixture or this document.

SECTION 17

17. Operational evidence and application gaps

Source basis: S3 current evidence boundaries; S4, S6-S7. Source key and edition details are in section 18.

The September defaults close internal configuration choices for the MVP specification. The following are evidence or application-completion items, not a request to reopen the same minor policy decisions. Status here is limited to the source material reviewed; no external system or account was independently certified for this PDF.

Item to evidence	Accountable track / material needed
CMA application and admission	Robert / Kimani: current application questions, legal applicant details, requested pilot parameters, admission conditions and formal regulator outcome. No actual form was supplied for this preparation.
Legal instrument and disclosures	Qualified counsel through Robert: note structure, flat-return/early-payoff and penalty treatment, client-money model, recovery enforceability, limited protection wording and applicable consumer obligations.

Item to evidence	Accountable track / material needed
Reserve and recovery operations	Kimani / Robert: actual capital, segregated custody account, coverage reconciliation, two-approver payout mandate, subsequent-recovery treatment and any guarantee/collateral instruments.
Payment and external providers	Named owners: agreements, allowed fields/operations, bank/MoMo capability, CRB access/consent, callback/reversal/reconciliation evidence and certified live environment.
Professional verification	Audit Operations / practitioners: actual engagement terms, current ICPAR standing, signed procedure findings and escalation/disciplinary arrangements.
Device and security assurance	Engineering/Security: supported physical devices, secure distribution/capture, offline/dwell results, independent testing, penetration-test closure and recovery evidence.
Scope and operating preparation	Product/Compliance: D-61 Plus disposition and D-62 Pulse disposition, staffed operational runbooks, official Rwanda holiday dataset, applicable data-residency/retention and fee tax classification.
Pilot evaluation and exit plan	Application owners: the proposed participant/portfolio caps, duration, success metrics, monitoring/reporting cadence, complaints contacts and closure/exit arrangements required by the actual form. These values are not invented here.

A live submission should pair this BRS with the actual operating, legal and evidence attachments. The product objective measures in section 2 provide candidate evaluation topics, but do not substitute for a regulator-approved test plan or agreed pilot limits.

SECTION 18

18. Amendment traceability and sources

Source basis: S1-S8. Source key and edition details are in section 18.

Changed area	Current BRS references / authority
Terms, history and normalization	BR-13/15/20; FR-204/501; sections 6-7. S2 UW-R01-UW-R07; S3 AM-01-AM-03, 8.2/8.4 and 11.2.
Requested DSCR and exposure	BR-10/12/14/17; AC-5; section 6. S3 AM-04/05, 3 and 11.1/11.2.
Rounding, units, schedule and ownership	BR-24/27/67; FR-700; sections 5, 7-9. S3 AM-06; 10.2-10.4; 11.2-11.4.
Fees and investor caps	BR-62-64; sections 8-9. S2 SEC-R05; S3 AM-11 and 11.1/11.4.
Recovery, reserve and revenue model	BO-7; BR-61/75; CR-6; section 10. S3 AM-07, 8.3/8.5 and 11.4; explicit departure from old no-reserve/no-penalty wording.
Policy transition and failed closing	Sections 5 and 8; S3 AM-08, 10.2 and later delegated CFG-03. Failed-closing refunds are attributed to CFG-03, not to a new Robert answer.

Changed area	Current BRS references / authority
Partial secondary and holds	BR-70-75; FR-108/606; sections 9/11. S3 AM-09/10/12; section 6 and CFG-04.
Authority and disclosure	BR-1-5/17; FR-103/401/403/409; section 3. S3 CFG-01.
Audit, retention and device limits	BR-40-56; NFR-7; AC-6; sections 12/14. S3 CFG-05.
Unchanged capabilities	Original BO, DR, FR, NFR, IR, CR and AC identifiers retained. Detailed requirements are consolidated under S1 with the amendments above.

Source register

S1 | Rozine BRS v1.0, July 2026

docs/Rozine-BRS.md

Original full-product requirements and identifiers. Superseded values are replaced in this edition.

S2 | Stakeholder consolidation, response-2026-09-20.3

docs/phase-0/stakeholder-policy-consolidation-2026-09-20.md

Recorded Robert/Kimani answer provenance and fee confirmation. Historical pending-default labels are superseded by S3.

S3 | MVP engineering baseline, engineering-2026-09-23.4

docs/phase-0/engineering-contract-draft-2026-09-20.md

Controlling reading order: current header and section 11, then 10, 8.4/8.5 and 3-7 where unchanged. Defaults are delegated choices; the further Erastus specification review was waived, not represented as performed.

S4 | Rozine MVP-first phased implementation plan

docs/Rozine_Phased_Implementation_Plan.md

Current local working copy: scope, retained scorecard/evidence conventions and delivery gates. No claim that every historical label in it is current.

S5 | Source authority and document control

docs/phase-0/source-authority-record.md

Approved source-precedence record; external authority remains separate.

S6 | Deferred scope and retained MVP boundaries

docs/phase-0/deferred-scope-register.md

Packaging/exclusion traceability; historical financial prohibitions read subject to later S3 amendments.

S7 | Provider and regulatory tracks

docs/phase-0/provider-regulatory-tracks.md

Ownership and external evidence tracks; named ownership is not proof of engagement or certification.

S8 | Stakeholder decision sheet, 20 September 2026

docs/phase-0/stakeholder-decision-sheet-2026-09-20.md

The six accepted trading-conduct categories. Earlier questions and proposed thresholds remain historical where superseded by S2/S3.

Edition control

Prepared as a new consolidated review edition on 26 September 2026. The July source and the dated decision records remain preserved. This edition does not create a new policy effective time, amend purchased terms, sign for an owner, certify external evidence or replace the requirement to validate implementation against the current approved policy.

Glossary

Term	Meaning
NOCF	Net operating cash flow: verified operating inflows less operating outflows.
CFADS	Cash flow available for debt service: normalized NOCF after the approved existing-debt and owner-draw deductions.
DSCR	Debt service coverage ratio: available cash flow divided by the applicable new repayment obligation.
TTM / DPD	Trailing twelve months / days past due.
Flat total return	Contractual return as a percentage of original principal for the complete note term, not an annual rate.
ICPAR / AUP	Institute of Certified Public Accountants of Rwanda / agreed-upon procedures.
CMA	Capital Market Authority; older source documents also use the abbreviation RCMA.
