

Brand system

Colour, type and surface rules for every Rozine product. Blue leads. Green, orange and the semantic states support it — never compete with it.

V1.0
JULY 2026

01 — CORE

Rozine Blue is the primary

Every product's chrome — active navigation, primary buttons, links, focus rings, avatars, key figures — is blue. Other brand colours identify a surface or a state; they never take over the interface.

		
Rozine Blue Primary. Investor app. All product chrome. #0A5CFF	Deep Blue Gradient base, pressed states. #0A3FB0	Ink All headings and key figures. #0C1830

02 — APP IDENTITY

One accent per audience

Each app carries a single accent so a user always knows which side of the marketplace they are on. The accent appears on the splash, the logo lockup and the primary action — nowhere else.

03 — RATING BANDS

Word leads, number supports, colour rides

The rating is the single measure of business quality. Stable is the healthy default and must never read as a warning — its blue is calm, not alarming.

Strong 4.4

4.0 – 5.0 · low risk.
Selective by design.

#12A150

Stable 3.4

3.0 – 3.9 · the healthy
default.

#0A5CFF

Weak 2.6

2.0 – 2.9 · elevated. Thin
coverage.

#DD8A00

Distressed 1.4

Below 2.0 · impaired. Not
listable.

#E5484D

Inter for product, Source Serif for documents

Product interfaces use a single sans family with tight negative tracking on display sizes. Long-form documents — plans, specifications, contracts — set body copy in a serif for reading endurance, with sans for headings and tables.

Display · 800 · –3.5%

Heading · 700 · –2.2%

Subheading · 600 · normal

Body · 400 · 1.6 line-height · #69748A. The default voice of the product: plain, specific and free of jargon.

EYEBROW · 700 · +14% TRACKING · UPPERCASE

RWF 11,500,000 · 14.5% · 4.4 / 5

Figures use tabular monospace so columns align and amounts never jitter as they update.

One card, one radius, one shadow

Components that communicate the same kind of thing must look identical everywhere. A metric card on the dashboard is the same object as a metric card in a directory.

ROZINE TECHNOLOGIES LTD

BRAND SYSTEM · V1.

The wing, and the lockup

The wing mark stands alone in tight spaces — app icons, favicons, avatars. Everywhere else use the horizontal lockup. Never stretch, recolour outside the palette, or add effects.

Non-negotiables

ALWAYS

- Blue as the primary; other colours identify surface or state.
- Identical components for identical meaning, on every page.
- Amounts in full francs with thousands separators where precision matters.
- The band word before the number, always.
- Plain language; long explanation behind an ⓘ, not in the layout.
- Layout with flex or grid and gap, never margin-spaced inline siblings.

NEVER

- A second score competing with the rating.
- Gradient backgrounds behind content, or decorative colour without meaning.
- Emoji in product surfaces.
- "APR", or any annualised rate, anywhere user-facing.
- Any reference to RRA, EBM, TIN or tax compliance.
- Language implying guaranteed capital or assured return.
