1. About this document

This Business Requirements Specification (BRS) sets out every business rule Rozine runs on: what each user can do, what the system must calculate, and what it must refuse. It is written for two readers. Each rule starts in plain English for the team and partners, followed by the exact rule, an example where one helps, and acceptance criteria the development team can test against.

Source of truth. This version is rebuilt from the documents submitted to the CMA in October 2026: the sandbox application form and the business model and project summary. Version 3.0 adds the decisions taken after the CMA meeting of October 2026. It replaces BRS v2.0 and any rule in the prototype that disagrees with it. Where the submitted documents leave a detail open, the rule is marked Proposed and listed in Section 25 for a decision before build.

Conventions. All amounts are Rwandan francs (RWF). "Must" is mandatory. D is a note's monthly due date; D−14 means 14 days before it. Days are calendar days and times are Kigali time (CAT, UTC+2). Every number is defined once, in Section 3, and every rule refers to it there. Every number in this document is versioned policy data that can be changed without code, but only through the change process in ADM-R05 and, during the sandbox, only with CMA agreement.

2. Glossary

Term	Meaning
Business	A Rwandan SME that raises money on Rozine by issuing a note. Its official representative acts for it.
Investor	A verified individual, accredited investor or corporate treasury that buys note units.
Audit Partner (CPA)	An independent ICPAR-licensed Certified Public Accountant under contract with Rozine who verifies businesses on site.
Note	A fixed-return debt obligation issued by one business. The business owes each holder directly, in proportion to the units they hold.
Unit	The smallest piece of a note: RWF 5,000 of principal. Holdings are whole units recorded on Rozine's ledger.
Raise	The 30-day period in which a note is offered to investors until it is 100% funded or expires.
Instalment	The equal monthly amount of principal and return the business pays on its due date.
CFADS	Cash flow available for debt service: verified monthly cash in, less operating costs, owner drawings and existing debt payments.
Coverage (DSCR)	CFADS divided by the proposed monthly instalment. 1.50 means the business earns 1.5 times what it must pay.
Rating	One of three labels, Strong, Stable or Distressed, produced by a published formula from CPA-verified facts. A disclosure label, not a recommendation.
Earnings fee	Rozine's fee on the return part of each investor payout. Never charged on principal.
Band (Rozine Plus)	The earnings-fee rate an investor pays, set by their active capital and locked per investment.
Active capital	Principal an investor has outstanding in notes, plus what they are checking out. Wallet cash does not count.
Wallet	A user's sub-account on Rozine's ledger. All wallets together always equal the money in the client account.
Client account	The segregated account at a licensed Rwandan bank that holds all customer money, separate from Rozine's own.
Sealed report	A monthly CPA report locked with a SHA-256 seal that binds the CPA's identity, licence, contents and time.
Flash Audit	An unannounced on-site check that the CPA must complete within 24 hours of assignment.
Current	A note that is not late, in default or disputed. Only current notes can be traded.
PAR30	Portfolio at risk: the share of principal outstanding in notes more than 30 days late.

3. Key parameters

Every limit in one place. Each is enforced by the system and stored as versioned policy data.

Parameter	Value	
Note unit and minimum investment	RWF 5,000	
Note size	RWF 3,000,000 to 100,000,000, in multiples of 5,000, and never above 35% of verified annual revenue	
Tenor	3, 4, 5 or 6 months	
Total return	10.0% to 15.0% of principal for the whole term	
Return table	Strong 12.5 · 13.0 · 13.5 · 14.0% | Stable 13.0 · 13.5 · 14.0 · 14.5% | Distressed 13.5 · 14.0 · 14.5 · 15.0% for 3 · 4 · 5 · 6 months	Whole term, flat; UW-R05
Coverage	Sized at 1.50; below 1.25 rejected; exact values, no rounding	
Rating labels	Strong, Stable, Distressed. Every label may raise	Coverage and caps still apply; UW-R04
Business eligibility	Verified annual revenue of RWF 30,000,000 or more; 36 months of statements (12 for a repeat issuer (REP-R04))	
Investor concentration	At most 50% of any raise per investor	
Raise window	30 days, then full refund	
Platform fee	3% of principal, from the business, at disbursement	
Earnings fee bands	15% under RWF 1M · 12% 1M–5M · 10% 5M–25M · 9% 25M–100M · 8% 100M and above	
Resale fee	2% of sale price from the seller; buyer pays nothing	
Audit Partner pay	40% of the platform fee + 25% of the earnings fee on notes they verify	
Withdrawal size	RWF 1,000 to 2,000,000 each; unusual requests held up to 24 hours	
Resale listing life	7 days	
Resale reservation	5 minutes, using settled wallet funds	
Late charges	5% at D, day 7 and day 30, capped at 15% of the instalment; 100% to holders	
Default	Day 31 if arrears are not fully cleared	

Parameter	Value	
CPA radius	30 km from the CPA's office	
Sandbox limits	100 businesses · 10,000 investors · RWF 5,000,000,000 principal outstanding · RWF only · 12 months	
Complaints	Acknowledge within 4 hours; resolve within 48 hours	
Application fee	RWF 0 during the sandbox	
Prospectus freshness	Latest sealed CPA report ≤ 35 days old at publication	PRO-R03
Prospectus gates	12 automatic gates; all must pass	PRO-R03
Raise pause on material change	Up to 7 days, then cancelled and refunded	PRO-R05
Readiness stages (verified monthly revenue, 3-month average)	1 · RWF 2.5M–<10M · 2 · 10M–<30M · 3 · 30M–<80M · 4 · 80M+	RDY-R02 (Proposed, OD-21)
Readiness signal targets (stage 1 → 4)	Record Gap ≤ 10 · 5 · 3 · 2% · Cash Lead ≥ 0 · 2 · 5 · 7 days · Forecast Error ≤ 25 · 15 · 10 · 7%	RDY-R04 (Proposed, OD-21)
Academy pass mark	80%; retake after 24 hours	RDY-R07
Repeat borrowing size	At most 1.5 × the last repaid note	REP-R05
Repeat waits	30 days after full repayment if any instalment was late · 14 days after a failed raise	REP-R06
Notes per business	At most one repaying and one raising	REP-R03
Business monthly submission	At D−10, about 3 minutes	VIS-R04
Visit window	D−10 to D−3; sample list shown to the business at visit − 3 days	VIS-R01
Wallet holds	Committed amount leaves Available at once; money moves only when the raise fills	LED-R02

4. Platform principles

These rules sit above every other rule. If a later rule seems to conflict with one of them, the principle wins and the conflict is a defect.

GEN-R01

Rozine is a platform, never a lender

Rozine connects businesses and investors and runs the note. It never puts its own money at risk.

RULE

- Rozine never lends its own money, guarantees capital or returns, buys or sells notes, makes a market or sets resale prices.
- Rozine has no balance-sheet exposure to any note.
- No screen, message or document may suggest a guarantee, insurance, collateral or reserve fund.

ACCEPTANCE CRITERIA

- No ledger posting exists in which a Rozine operating account is the counterparty to a note purchase or sale.
- A search of all user-facing copy finds no promise of guaranteed returns.

GEN-R02

Customer money is never Rozine's

All investor and business money sits in a separate bank account. Rozine can only move its own earned fees out of it.

RULE

- All customer money is held in a segregated client account at a licensed Rwandan commercial bank.
- The sum of all wallet balances must equal the client-account balance, reconciled every day (LED-R05).
- Only earned, disclosed fees move from the client account to Rozine's operating account.

ACCEPTANCE CRITERIA

- Daily reconciliation report shows zero material variance or raises an exception.
- No transfer to the operating account exists without a matching fee entry.

GEN-R03

Everything shown before commitment

Nobody commits money without seeing exactly what it costs and what they get back, in francs.

RULE

- Before any confirmation, the user sees the amount, every fee in RWF, the net return, the full schedule and the risk warning.
- The figures shown must be the figures executed. If any input changes between display and confirmation, the confirmation is blocked and the screen refreshes.

ACCEPTANCE CRITERIA

- Checkout, offer acceptance, resale purchase and withdrawal screens all show fees in RWF before the confirm button is enabled.

GEN-R04

Formulas, not judgement

Every rating, offer, price, gate and fee comes from a published formula. Anyone can recompute it from the stored inputs. No staff member approves or edits a step in any flow.

RULE

- Every calculated decision stores its inputs, the policy version in force and the result.
- No AI or machine-learning model makes a credit, pricing or investment decision.
- No staff role can override a failed check or approve an item that has not passed its threshold.
- OCR reads uploaded statements only. An item below its confidence threshold is shown to the CPA as a confirm-or-correct field at the next visit step; it never goes to a staff queue.
- Where a threshold is not met, the action is blocked at the point of entry with the exact fix shown.

ACCEPTANCE CRITERIA

- Replaying any stored decision with its stored inputs and policy version gives the identical result.
- No admin action exists that changes an underwriting, prospectus, readiness or repeat-borrowing outcome.

GEN-R05

Every action has a name on it

Every change in the system can be traced to the person or process that made it.

RULE

- Every state change records the actor (user, staff member, CPA or system job), the time and, for staff, the reason.
- Ledger and audit-log entries can never be edited or deleted by any role, including Superadmin. Corrections are new linked entries.

ACCEPTANCE CRITERIA

- Attempting to update or delete a ledger row fails at the database level.

GEN-R06

Exact money

Amounts are stored precisely so nothing is lost to rounding.

RULE

- Money is stored as exact RWF decimals, never floating point.
- Every balance is derived from ledger entries, never stored as a free-standing number.
- Prices set by users (resale) are whole francs. Rounding of computed payouts follows OD-12.

ACCEPTANCE CRITERIA

- Summing the ledger for any wallet reproduces the displayed balance exactly.

GEN-R07

Not an extra job

Rozine asks a business or investor only for what it cannot already know, and pre-fills the rest.

RULE

- Rozine never asks a business to keep its books in Rozine. Bookkeeping stays in the business's own books or software; the monthly CPA audit measures the result.
- Every input is pre-filled where the data exists; the user confirms rather than types.
- Each input has one label, one example and, where needed, a one-line helper. It is validated as the user types, with the fix shown on the field.
- Every form saves automatically and shows its expected time before it starts.
- No finance jargon appears in the Business or Investor App.

ACCEPTANCE CRITERIA

- No business screen asks for a figure Rozine already holds from the ledger, KYC or the last sealed report.

GEN-R08

One source of truth

Every number is stored once and every app reads it from there.

RULE

- Every parameter is defined once (Section 3) and referenced by ID.
- Every derived figure (rating, return, coverage, stage, signals, eligibility) is computed by the core and read by every app; no app computes its own copy.
- When a source changes, every app showing it updates from the same event (Section 23).

ACCEPTANCE CRITERIA

- The same note shows identical figures in the Investor, Business, Auditor and Admin apps at the same moment.

5. Accounts, identity and KYC/KYB

Who can join, what they must prove, and when they can move money.

KYC-R01

Sandbox notice first

Everyone sees that Rozine is in the CMA sandbox before they sign up.

RULE

- Before onboarding, every user sees and acknowledges the sandbox notice: "Rozine is testing this service in the Capital Market Authority's Fintech Regulatory Sandbox, under limits set by the CMA. Admission to the sandbox is not a licence or an endorsement."
- The acknowledgement is stored with the notice version, time and a hash.

ACCEPTANCE CRITERIA

- A user cannot reach the sign-up form without acknowledging the notice.
- The stored acknowledgement shows the exact version shown.

KYC-R02

Investor verification

An investor must prove who they are and link an account in their own name before they can invest.

RULE

- Individuals: NID or passport verified; resident in Rwanda during the sandbox; aged 18 or over (Proposed, OD-14).
- Each investor links at least one bank or MoMo account whose holder name matches the verified identity.
- Corporate treasuries and accredited investors: entity documents verified as for businesses (KYC-R03), plus an authorised signatory.
- Unverified users can browse but cannot fund a wallet, invest or trade.

ACCEPTANCE CRITERIA

- A user whose ID check fails or whose account name does not match cannot deposit.
- A verified investor sees the wallet unlocked immediately after verification.

KYC-R03

Business verification (KYB)

A business proves it is real and who owns and runs it.

RULE

- Required: RDB registration, TIN, Articles of Association, shareholder register, director IDs, and identification of beneficial owners.
- One official representative acts for the business for every approval, acceptance and dispute. A second signatory is never required.
- The business links a bank or MoMo account in the business's own registered name for disbursements and withdrawals.

ACCEPTANCE CRITERIA

- A business with an unmatched account name cannot accept an offer.
- Only the official representative's account sees accept, dispute and authorise buttons.

KYC-R04

Sanctions and PEP screening

Everyone is checked against international sanctions and politically-exposed-person lists.

RULE

- Users, directors and beneficial owners are screened against UN, OFAC and EU sanctions and PEP lists before wallet activation and periodically after.
- A possible match blocks activation and opens a compliance case. Only Compliance can clear it, with a recorded reason.

ACCEPTANCE CRITERIA

- A test name on a sanctions list is blocked and appears in the Compliance queue.

KYC-R05

Consent once, at signup

Investors give their consents once, at signup, so their first investment has nothing extra to do.

RULE

- Terms and Privacy Policy: agreed by continuing. The signup button carries the line "Continuing means you agree to the Terms and Privacy Policy", with both linked. No tick box.
- Risk acknowledgement: after identity verification, one screen lists the five statements below with a single tick, "I understand all of the above". The wallet unlocks once it is ticked.
- The five statements: I can lose all the money I invest · There is no guarantee or collateral · Returns are paid only if the business pays · I may not find a buyer if I want to sell early · Rozine operates in the CMA sandbox under limits.
- Each prospectus: no tick. The checkout button reads "Pay RWF [amount]" with the line "Paying confirms you have read the prospectus for each note"; the version and fingerprint of each prospectus are stored with each line (PRO-R04).
- Every consent is stored with its wording version, time and hash. If wording changes, the investor sees the new wording once, with one tick, the next time they open the app.

ACCEPTANCE CRITERIA

- A verified investor with the acknowledgement on file can complete a first checkout with no extra step.
- Checkout never shows a tick box.
- A wording change triggers one re-acknowledgement at next app open, never inside checkout.
- Whether the regulation requires a per-investment risk confirmation is checked under OD-22.

KYC-R06

Security of accounts

Accounts are protected to banking standard.

RULE

- Passwords of 12+ characters checked against breached-password lists; TOTP two-factor and passkeys available to all users.
- Two-factor is mandatory for staff and Audit Partners; Audit Partner devices are bound to the account.
- Re-confirmation is required before any security or payout-account change.
- Log-in, sign-up and password endpoints are rate-limited.

ACCEPTANCE CRITERIA

- A staff account without two-factor cannot sign in.

6. Underwriting and rating

How Rozine decides whether a business can borrow, how much, and at what return. No staff override exists anywhere in this section.

UW-R01

Who may apply

Only established, profitable, well-documented businesses get in.

RULE

- Rwandan-registered business with verified annual revenue of RWF 30,000,000 or more.
- 36 months of bank and mobile-money statements. A repeat issuer needs 12 months (REP-R04).
- Statements are uploaded in the app; each original is stored with its SHA-256 hash.
- No application fee during the sandbox.

EXAMPLE

A shop with RWF 28M verified annual revenue is rejected with the reason "Revenue below RWF 30,000,000". At RWF 30M exactly it may proceed.

ACCEPTANCE CRITERIA

- Revenue of 29,999,999 rejected; 30,000,000 accepted.
- An upload with fewer than 36 monthly periods is rejected with the missing months listed.

UW-R02

Cash flow available for debt service

The engine works out how much cash the business really has left each month to repay, after running the business, paying the owner and paying other lenders.

RULE

- CFADS = verified monthly cash in − operating costs − owner drawings − existing debt payments.
- Owner drawings are deducted as a cost, using the verified history. Salary already recorded as an operating cost is not deducted twice.
- Existing debt payments use the method in OD-02.
- Exceptional months are trimmed using the method in OD-03. Weak and negative months are always kept.

EXAMPLE

Monthly cash in after operating costs RWF 4,200,000; owner drawings 600,000; existing loan 400,000. CFADS = 3,200,000.

ACCEPTANCE CRITERIA

- CFADS is recomputed identically from the stored monthly series and policy version.

UW-R03

Coverage and sizing

A business may only borrow what its cash flow can comfortably carry. Requests that leave too thin a cushion are refused.

RULE

- Coverage = CFADS ÷ proposed instalment, using exact values. Displays may round; decisions never do.
- Requested amount with coverage of 1.50 or more: offered as requested.
- Coverage from 1.25 up to 1.50: counter-offer sized at 1.50 (Proposed, OD-01).
- Coverage below 1.25: rejected. 1.2499 is below 1.25.
- The offer is the lowest of: the request, capacity at 1.50, 35% of verified annual revenue, and RWF 100,000,000, rounded down to a multiple of 5,000. Below RWF 3,000,000 the application is rejected.

EXAMPLE

CFADS 3,200,000. Request 12,000,000 over 6 months at 14.0% (Strong) → instalment 2,280,000 → coverage 1.40. Counter-offer: maximum instalment 3,200,000 ÷ 1.50 = 2,133,333; principal = 2,133,333 × 6 ÷ 1.14 = 11,228,068, rounded down to RWF 11,225,000.

ACCEPTANCE CRITERIA

- Coverage 1.2499 rejected even if displayed as 1.25.
- Offer never exceeds 35% of revenue or RWF 100M.
- Every rejection shows the reason that failed.

UW-R04

Rating

Each business carries one of three labels: Strong, Stable or Distressed. It is a verified disclosure label from a published formula, not a recommendation.

RULE

- The label is produced by the published formula (OD-04) from CPA-verified facts: time trading, profitability, consistency of profit and size.
- Every label may raise. Coverage (UW-R03) and the size caps still apply, and the return follows the label (UW-R05).
- The label is recomputed on every sealed monthly report and published to holders with the report.
- A new label never changes the terms of an issued note.

ACCEPTANCE CRITERIA

- A Distressed business that passes coverage can list.
- A label that moves to Distressed mid-note is shown to holders; the note's rate and schedule are unchanged.

UW-R05

Return

The return comes from one table: the label sets the starting point and each month beyond three adds half a point. It is fixed for the whole note.

RULE

- Return for the whole term, flat: principal × return from the table below.
-

Label	3 months	4 months	5 months	6 months
Strong	12.5%	13.0%	13.5%	14.0%
Stable	13.0%	13.5%	14.0%	14.5%
Distressed	13.5%	14.0%	14.5%	15.0%

- The gap between labels is kept small (0.5 point) so investors are never paid to chase risk.
- The table is reviewed after 6 months of sandbox data. Measure to watch: the share of Strong businesses that accept their offer.

EXAMPLE

RWF 24,000,000, Strong, 6 months: return 14.0% = 3,360,000; total repayable 27,360,000; instalment 4,560,000.

ACCEPTANCE CRITERIA

- The return on any note equals its table cell exactly.
- No return exceeds 15.0% or falls below 12.5%.

UW-R06

Changes before and after acceptance

If verified facts change, any offer not yet accepted is withdrawn and recalculated. Notes already issued keep every term.

RULE

- A verified financial, ownership or compliance change cancels any unaccepted offer and triggers a new calculation.
- Issued notes keep their rating at issue, return and schedule. Investors' terms never move.
- Old evidence and calculations are kept. A calculation built on older evidence can never overwrite one built on newer evidence.

ACCEPTANCE CRITERIA

- Uploading a corrected statement while an offer is open voids the offer and shows a new one.
- Recalculations are versioned; the newest evidence version always wins.

7. Verification and Audit Partners

Licensed accountants check every business in person before it raises and every month while its note is outstanding.

AUD-R01

Accreditation

Only licensed, independent CPAs can verify businesses.

RULE

- A CPA must hold a current ICPAR licence, checked at accreditation and before every assignment.
- A CPA declares conflicts of interest and cannot be assigned to a business they or their firm have a relationship with.
- CPAs rotate across businesses (rotation period: OD-06).

ACCEPTANCE CRITERIA

- A lapsed licence blocks new assignments the same day.

AUD-R02

Assignment

The nearest eligible CPA within 30 km gets the work.

RULE

- Assignments go to an eligible CPA whose office is within 30 km of the business premises.
- A CPA cannot verify a business where a conflict is declared or where rotation forbids it.

ACCEPTANCE CRITERIA

- A CPA 31 km away is never offered the assignment.

AUD-R03

Baseline verification

No note lists until a CPA has visited and sealed a baseline report.

RULE

- The CPA performs ISRS 4400 agreed-upon procedures on site.
- Photos come only from the in-app camera with live location. Gallery uploads are blocked.
- Any unexplained difference between records and what the CPA finds blocks the seal. The CPA follows the guided baseline visit (VIS-R02).
- The sealed baseline report is published on the listing.

ACCEPTANCE CRITERIA

- A listing cannot open without a sealed baseline report.
- A photo taken outside the premises geofence is rejected.

AUD-R04

Monthly verification cycle

Every month, counted from the note's own due date, the business submits its figures, one CPA checks them in person and seals the report, and investors get it before payment day.

RULE

- D−14: the visit-ready checklist appears in the business's repayment reminder (VIS-R03).
- D−10: the business submits its monthly figures and next month's forecast (VIS-R04).
- D−10 to D−3: the assigned CPA follows the guided visit (VIS-R01) and seals. One CPA seals each report; no second CPA, reviewer or co-signature is required.
- After sealing, the business has 24 hours to dispute (AUD-R06). It does not co-sign. No dispute in 24 hours and the report stands.
- By D−1: sealed report and updated label published to every holder.

EXAMPLE

A note due on the 18th: reminder and checklist on the 4th, figures by the 8th, CPA visit between the 8th and the 15th, report out by the 17th, collection at 23:59 on the 18th.

ACCEPTANCE CRITERIA

- A report sealed by one CPA publishes without any further signature.
- A seal attempted after D−3 is logged as late and raises the CMA alert in ADM-R07. Holders receive the report before D.

AUD-R05

Late or missing records

A late upload is chased hard, but it does not make the note default on its own.

RULE

- If figures are not submitted by D−10, the business gets daily reminders and the CPA is notified.
- A missing report is never by itself a default. Collection at D still runs.
- If no report is sealed by D−1, holders are told the report is late.

ACCEPTANCE CRITERIA

- A missing upload does not change note status from current.

AUD-R06

Disputes

A business that disagrees with a report can dispute it, and the note pauses on the market until it is settled.

RULE

- A dispute raised within 24 hours sends the report to desk review by the Head of Finance & Auditor Network (deadline: OD-07).
- While disputed, the note cannot be traded.
- The decision and its reason are recorded and published with the report.

ACCEPTANCE CRITERIA

- A disputed note shows as untradeable on the market immediately.

AUD-R07

Flash Audits

Rozine can send a CPA unannounced, and it must happen within 24 hours.

RULE

- Random Flash Audits are completed within 24 hours of assignment, with the same evidence rules as AUD-R03.
- Selection rules and frequency: OD-08.

ACCEPTANCE CRITERIA

- An unfinished Flash Audit at 24 hours raises an alert.

AUD-R08

Arrears visit

When a business is a week late, its CPA visits straight away.

RULE

- At day 7 of arrears, the assigned CPA makes an immediate site visit to check stock, cash and operations, and files a sealed note to holders.

ACCEPTANCE CRITERIA

- Day 7 of arrears creates a visit task for the assigned CPA.

8. The note and the raise

What investors buy and how a raise opens, fills or fails.

NOTE-R01

What a note is

A note is a simple promise from one business to pay its investors back, plus a fixed return, in monthly instalments.

RULE

- Issued by one business. The business owes each holder directly, pro rata to units.
- Unsecured: no collateral, guarantee or insurance.
- Units are book entries on Rozine's ledger. No blockchain, token or smart contract is used.
- RWF only.

NOTE-R02

Schedule

The business pays the same amount every month, and everyone knows every payment before the raise opens.

RULE

- Instalment = principal × (1 + total return) ÷ number of months.
- The first due date is one month after disbursement; each later due date falls on the same day of the following month (month-end rule: OD-09).
- The full schedule is shown before anyone commits.

EXAMPLE

RWF 12,000,000, Strong, 6 months at 14.0%: total repayable 13,680,000; instalment 2,280,000.

ACCEPTANCE CRITERIA

- Schedule shown on the listing equals the schedule created at disbursement.

NOTE-R03 Listing

A note is listed for 30 days with everything an investor needs to decide.

RULE

- The listing shows: the prospectus (PRO-R01), CPA-verified financial summary, sealed baseline report, rating, return, tenor, schedule, fees and the risk warning.
- The raise stays open for 30 days or until 100% funded.

ACCEPTANCE CRITERIA

- The risk warning appears on every deal page.

NOTE-R04 Raise outcome

A raise either fills completely or everyone gets their money back.

RULE

- At 100% funded, disbursement runs automatically (SVC-R01). No staff approval exists.
- Not 100% funded at day 30: every commitment returns to investor wallets in full; no fee is charged to anyone.
- A fully funded note closes to new investment immediately.

ACCEPTANCE CRITERIA

- At day 30 and 99% funded, all wallets are refunded to the franc.
- A 100% funded note disappears from investable deals.

NOTE-R05 Early repayment

A business can repay early, but investors still get the full return they were promised.

RULE

- The business may repay the whole remaining balance early. The return owed does not reduce.
- The payment is distributed pro rata to holders, less the earnings fee on the return portion, and the note matures.

ACCEPTANCE CRITERIA

- An early repayment pays holders exactly the remaining scheduled amounts.

9. Investing, cart and Rozine Plus

How investors buy, and how the cart unlocks lower earnings-fee bands.

INV-R01

Investment size

Investors buy in RWF 5,000 units, and nobody can own more than half of one raise.

RULE

- Every investment is a whole number of RWF 5,000 units.
- One investor may hold at most 50% of any raise, counting primary and secondary holdings together.
- An investment cannot exceed what is left to fill.

EXAMPLE

On a RWF 12,000,000 raise, one investor may hold at most RWF 6,000,000.

ACCEPTANCE CRITERIA

- A cart line that would take an investor above 50% is blocked with the maximum allowed shown.

INV-R02

Add to cart

Investors collect the notes they want in a cart and buy them together.

RULE

- "Add to cart" is available on every open, not-fully-funded deal. Fully funded notes cannot be added.
- A note already in the cart that fills before checkout stays visible, marked as filled, and is excluded from checkout.
- Each cart card shows: business name, industry, location, raised, average monthly revenue, left to fill, notes, the return formula (invest + interest = get back) and an amount slider.
- The cart total sits fixed at the top and updates as amounts change.

ACCEPTANCE CRITERIA

- The Add to cart button is disabled on a 100% funded deal.
- Moving a slider updates the cart total instantly.

INV-R03

Checkout

One checkout buys everything in the cart at once, or nothing.

RULE

- Checkout opens the same source-of-funds sheet used elsewhere in the app (wallet, MoMo or bank).
- Funds from MoMo or bank must settle into the wallet before the commitment is confirmed.
- The checkout is atomic: every line succeeds or none does. Before execution the system re-checks each line for: note still open, units left, the 50% limit, wallet funds and the risk acknowledgement on file (KYC-R05). A commitment places a hold on the wallet (LED-R02). The investor may withdraw it at any time, for a full refund, until the raise reaches 100%; from then on it is final.

ACCEPTANCE CRITERIA

- If one line fails at execution, no line is committed and the investor sees which line failed and why.

INV-R04

Earnings-fee bands

The more capital an investor has working in notes, the lower the fee on their earnings.

RULE

- Band by active capital after checkout: under RWF 1M 15%; 1M to under 5M 12%; 5M to under 25M 10%; 25M to under 100M 9%; 100M and above 8%.
- Active capital = principal outstanding in held notes + the checkout total. Wallet cash never counts. Treatment of defaulted notes: OD-10.
- The band is evaluated once, at the moment of checkout, and every line in that checkout locks the same rate for the life of that investment.
- Earlier investments keep the rate they locked. A band never rises on an existing investment.

EXAMPLE

Active capital RWF 600,000. Cart: 100,000 + 150,000 + 150,000 = 400,000. 600,000 + 400,000 = 1,000,000 → 12% band. All three lines lock 12%. The earlier 600,000 keeps 15%.

ACCEPTANCE CRITERIA

- Exactly RWF 1,000,000 gives 12%; 999,999 gives 15%.
- The cart total header shows the band the checkout will lock and how far the investor is from the next one.

INV-R05

Confirmation

After paying, the investor sees exactly what they bought.

RULE

- The confirmation lists every note bought with: business name, amount invested and the earnings-fee rate applied.
- The same details are sent by e-mail and stored in the investor’s history.

ACCEPTANCE CRITERIA

- Three notes bought shows three lines with three amounts and the locked rate.

INV-R06

Payout maths for investors

Investors are taxed by Rozine only on what they earn, never on what they put in.

RULE

- Each monthly payout = holder’s share of the instalment. The earnings fee applies only to the return portion.

EXAMPLE

Invest RWF 100,000 in a 6-month Strong note at 14.0%, 15% band. Total return 14,000. Earnings fee 15% × 14,000 = 2,100. Investor earns 11,900 and gets back 111,900 in total (100,000 + 11,900), about 18,650 a month.

ACCEPTANCE CRITERIA

- Summing six payouts equals principal + return − earnings fee.

10. Disbursement and servicing

What happens once a raise fills, and every month after.

SVC-R01 Automatic disbursement

When a raise reaches 100%, the money goes to the business automatically. No one approves it.

RULE

- On reaching 100%: deduct the 3% platform fee; pay the rest to the business's verified account; issue investor holdings; start the schedule; credit 40% of the fee to the Audit Partner.
- The return is calculated on the full principal, not the amount after the fee.

EXAMPLE

RWF 12,000,000 raise: fee 360,000 (Audit Partner 144,000, Rozine 216,000). Business receives 11,640,000 and repays 13,680,000 (Strong, 6 months, 14.0%).

ACCEPTANCE CRITERIA

- Disbursement posts within the same transaction as the 100% fill.
- No disbursement approval screen exists.

SVC-R02 Repayment reminders

Businesses are reminded well before every payment so the money is ready.

RULE

- From D−14: reminders to fund the business wallet by in-app notice, e-mail and SMS, until the wallet holds the instalment.

ACCEPTANCE CRITERIA

- A funded wallet stops further reminders for that instalment.

SVC-R03 Collection and payouts

On payment day the system takes the instalment from the business wallet and pays investors the same night.

RULE

- At 23:59 on D, the instalment is collected from the business wallet.
- Payouts are credited to holders at that moment, pro rata to units, less the earnings fee at each investment's locked band.
- 25% of the earnings fee is credited to the Audit Partner; the rest to Rozine.
- The client account is reconciled (LED-R05).

ACCEPTANCE CRITERIA

- A holder who bought units at 22:00 on D receives that month's payout (see SEC-R07).

SVC-R04

Maturity

The last instalment closes the note.

RULE

- After the final instalment posts, the note is marked Matured and moves to holders' matured list.

11. Collections, late charges and recovery

What happens when a business is late. Every step is automatic. Dates and amounts are never rescheduled.

COL-R01

Short wallet on payment day

If the wallet is short, the system takes what is there and keeps taking money the moment more arrives.

RULE

- At 23:59 on D, whatever is in the business wallet is collected and paid out pro rata.
- From then on, any funds reaching the business wallet are collected the moment they arrive.
- The note stops being tradeable at D.
- Allocation of part-payments: OD-11.

ACCEPTANCE CRITERIA

- A wallet holding 1,500,000 against a 2,280,000 instalment pays out 1,500,000 and marks 780,000 overdue.

COL-R02

Late charges

Lateness costs the business 5% three times, and every franc goes to the investors who were kept waiting.

RULE

- 5% of the unpaid part of the instalment at D, at day 7 and at day 30, capped at 15% of the instalment.
- Every franc of late charges collected goes to that note's holders pro rata. Rozine takes nothing.

EXAMPLE

Instalment 2,280,000; 780,000 unpaid. Charges: 39,000 at D, 39,000 at day 7, 39,000 at day 30 = 117,000, below the cap of 342,000.

ACCEPTANCE CRITERIA

- No Rozine ledger account ever receives a late-charge credit.

COL-R03 Daily reminders

From the first day late, the business hears about it every day until it pays.

RULE

- From day 1 until arrears are cleared: daily in-app notice, SMS and e-mail stating the amount owed, charges so far, the next charge date and the day-31 consequences.

ACCEPTANCE CRITERIA

- Clearing arrears stops reminders the same day.

COL-R04 Escalation

The pressure rises at fixed points.

RULE

- Day 7: Rozine contacts the business directly; the CPA visits (AUD-R08).
- Day 30: formal legal demand sent to the business.

COL-R05 Cure

If the business pays everything it owes before day 31, the note goes back to normal on its own.

RULE

- Payment in full of all arrears and late charges before day 31 returns the note to current automatically.
- No workout plan, rescheduling or committee exists. Dates and amounts are never changed.

ACCEPTANCE CRITERIA

- Paying in full on day 29 restores tradeability the same moment.

COL-R06 Default and recovery

At day 31 an unpaid note is in default and legal recovery begins, while the system keeps collecting anything that arrives.

RULE

- Day 31 with arrears not fully cleared: note declared in default; legal counsel starts recovery under Rwandan commercial law.
- Automatic collection from the business wallet continues.
- Everything recovered goes to holders pro rata. Rozine does not cover shortfalls and earns nothing from a default.
- Treatment of future instalments after default: OD-13.

ACCEPTANCE CRITERIA

- A defaulted note can never be traded again.

12. Secondary market

Investors can sell units to other investors before maturity. Rozine runs the venue but never trades or sets prices. Freedom is the default; only conduct that harms others or hides information is policed.

SEC-R01 What can be traded

Only healthy notes can be traded.

RULE

- Only units in current notes can be listed or bought. Late, defaulted or disputed notes cannot.
- A buyer is still subject to the 50% limit (INV-R01).
- A seller cannot buy their own listing.

ACCEPTANCE CRITERIA

- Listing units in a late note is blocked with the reason shown.

SEC-R02 Listing

A seller picks how many units to sell and the price per unit, and the listing lasts 7 days.

RULE

- Seller chooses any number of whole units and a whole-franc price per unit.
- Listings expire after 7 days at no cost and can be relisted.

ACCEPTANCE CRITERIA

- A listing created at 10:00 on the 1st expires at 10:00 on the 8th.

SEC-R03 Price cap

A seller can never ask more than the units will ever pay out, but can ask less for a quick exit.

RULE

- Maximum price per unit = remaining contractual payouts per unit, rounded down to a whole franc.
- This protects buyers. Rozine sets no price, minimum or reference price.

EXAMPLE

Unit RWF 5,000 at 14.0% over 6 months pays 950 a month. With 3 instalments left, the cap is 2,850 per unit. The seller may ask 2,700.

ACCEPTANCE CRITERIA

- A price of 2,778 in that example is rejected.

SEC-R04

Partial buying

A buyer can take some or all of a listing. What isn't bought stays with the seller.

RULE

- A buyer may buy any whole number of units up to the listed quantity.
- Unsold units remain listed until sold, cancelled or expired.

SEC-R05

Reservation

When a buyer starts buying, the units are held for them for 5 minutes.

RULE

- Starting a purchase reserves the units for 5 minutes, using funds already settled in the buyer's wallet.
- While a reservation is open, the seller cannot cancel or reprice. The seller's app shows when the reservation ends.
- An expired reservation releases the units with no charge.

ACCEPTANCE CRITERIA

- A seller pressing cancel during a reservation sees a countdown and the action is refused.

SEC-R06

Settlement

Money and units swap in one step or not at all, and ownership moves instantly.

RULE

- Settlement moves money and units in one atomic ledger transaction.
- Ownership passes at settlement.
- Fee: 2% of the sale price from the seller. The buyer pays nothing. No listing, reservation, cancellation or expiry fees.
- The buyer's units carry the buyer's own earnings-fee band, set at settlement (Proposed, OD-15).

EXAMPLE

Buyer takes 4 units at 2,700 = 10,800. Seller fee 216. Seller receives 10,584. Rozine earns 216.

ACCEPTANCE CRITERIA

- A failure mid-settlement leaves no partial state.

SEC-R07

Due-date pause

Trading pauses briefly on payment day so the payout always goes to the right person.

RULE

- Trading in a note pauses from 23:00 on its due date until that month’s payouts post.
- Each payout goes to whoever holds the units when the instalment is collected.

ACCEPTANCE CRITERIA

- A purchase attempt at 23:10 on D is refused with the reopening time.

SEC-R08

Halts

Compliance can stop the market or one note instantly when something is wrong.

RULE

- Compliance may halt the whole market or one note, with a recorded reason.
- Open reservations are released; listings are cancelled and must be relisted after the halt.
- Users and the CMA are notified.

ACCEPTANCE CRITERIA

- After a halt lifts, no old listing reappears.

SEC-R09

Cancellations

Sellers can withdraw a listing any time nobody is buying. Staff need a recorded reason.

RULE

- A seller may cancel or reprice only when no reservation is open.
- An admin cancellation requires a recorded reason shown to the seller.

SEC-R10

Market abuse

Trading is free. Only behaviour that deceives or harms other investors opens an investigation. An alert is a case to review, not a penalty.

RULE

- Surveillance opens a case for: trading between linked accounts to fake activity (wash trading); trading on a report, rating or arrears not yet published (insider trading) by businesses, CPAs, staff or their relatives; staff using knowledge of orders to trade first; coordinated listing between linked accounts to mislead on price; rapid buy-and-sell cycles moving money with no investment purpose (laundering); multiple accounts used to beat the 50% limit.
- Selling cheaply, selling often, buying a nearly matured note or holding many listings is never by itself a case.
- Thresholds for each pattern: OD-16. Outcomes are decided by Compliance with a recorded reason; reportable activity goes to the FIC.

ACCEPTANCE CRITERIA

- A single investor listing 20 notes at a discount opens no case.
- A buy by a CPA in a note they verify, between seal and publication, opens a case.

13. Ledger, wallets and settlement

The record of every franc and every unit.

LED-R01

Double-entry ledger

Every movement of money or units is written twice, in balance, forever.

RULE

- Every movement is a balanced double-entry record. Entries are append-only.
- Every financial action runs in one database transaction with an idempotency key, so retries never double-post.

ACCEPTANCE CRITERIA

- Replaying a payment callback twice posts once.

LED-R02

Wallets and holds

The wallet always reflects what the investor has done in the app. Money committed to a raise leaves "Available" at once, but only moves when the raise fills.

RULE

- Each wallet shows three figures, all derived from the ledger: Total balance, Committed and Available (Total – Committed).
- A commitment posts a hold. Available drops at once; Total does not change; no money moves and no transaction fee is charged.
- When the raise reaches 100%, each hold converts into the purchase in the same transaction as disbursement (SVC-R01).
- If the investor withdraws before 100%, or the raise does not fill by day 30, the hold is released at once and Available goes back up.
- Held funds cannot be withdrawn, spent on another note or used for a resale purchase. Resale reservations (SEC-R05) use the same hold.
- Wallet page: Committed opens a list of each held amount with the business, the raise's % filled and its closing date, labelled "Held for this raise. It moves only when the raise fills."

EXAMPLE

Wallet RWF 500,000. Investor commits 150,000 to a raise at 60%. Wallet shows Total 500,000 · Committed 150,000 · Available 350,000. The raise fills on day 9: Total 350,000 · Committed 0 · Available 350,000.

ACCEPTANCE CRITERIA

- Available updates in the same moment as the commitment.
- A withdrawal request above Available is refused with Available shown.
- A released hold restores Available to the franc.

LED-R03

Deposits

Money comes in only from accounts in the user’s own name.

RULE

- Deposits arrive by MoMo or bank from a verified account in the user’s name.
- A deposit from a third-party account is held and sent to Compliance.

LED-R04

Withdrawals

Money goes out only to the user’s own account, with no Rozine fee.

RULE

- Withdrawals go only to the user’s own verified account. RWF 1,000 to 2,000,000 per withdrawal.
- No Rozine fee; the provider’s actual charge is shown first.
- Unusual requests are held up to 24 hours for review (criteria: OD-17).

ACCEPTANCE CRITERIA

- A request for 2,000,001 is refused.

LED-R05

Daily reconciliation

Every day, the bank balance must match the sum of all wallets.

RULE

- Daily automated match of the client-account balance to ledger client balances.
- Any material variance alerts Treasury, Compliance and the CMA supervisor seat and opens an exception that cannot be closed without a recorded resolution.

ACCEPTANCE CRITERIA

- An injected 1-franc mismatch raises an exception.

LED-R06

Fee sweep

Rozine’s earned fees are the only money that leaves the client account for Rozine.

RULE

- Earned fees move to the operating account by system instruction only, matched to fee entries (timing: OD-18).

14. Fees, revenue and CPA pay

Every way money reaches Rozine or an Audit Partner. Nothing else is allowed.

FEE-R01

The complete fee list

Rozine earns from four disclosed fees and nothing else.

RULE

- Platform fee 3% of principal, business, at disbursement.
- Earnings fee 15%–8% on the return portion of payouts, investor, by locked band.
- Resale fee 2% of sale price, seller, at settlement.
- Application fee RWF 0 in the sandbox; RWF 50,000 once, after audit approval, only after the sandbox and subject to approval.
- Rozine never earns an interest spread, a fee on returned principal, a share of late charges or anything from a default.

ACCEPTANCE CRITERIA

- A ledger query by fee type finds no other Rozine income type.

FEE-R02

Audit Partner pay

The CPA is paid from Rozine's fees on the notes they verify, so they earn when the business performs.

RULE

- 40% of the platform fee, credited at disbursement.
- 25% of the earnings fee on each monthly payout of that note.
- The CPA's share is the same whatever band the investors are in; it is a share of what Rozine actually earns.
- Payment for Flash Audits and arrears visits: OD-19.

EXAMPLE

RWF 12,000,000, Strong, 6 months at 14.0%, all holders at 15%: earnings fee 15% × 1,680,000 = 252,000. CPA earns 144,000 + 63,000 = 207,000; Rozine keeps 216,000 + 189,000 = 405,000.

ACCEPTANCE CRITERIA

- CPA statement totals match their ledger credits.

FEE-R03

Rozine compensates its own mistakes

If Rozine causes a loss, Rozine pays it back in full.

RULE

- Losses caused by Rozine itself, such as a ledger error or staff misconduct, are compensated in full from Rozine's own funds.
- Losses from business default are the disclosed risk and are not compensated.

15. Compliance, data and complaints

CMP-R01 AML monitoring

Documented rules watch for suspicious money movement.

RULE

- Rules flag structuring, rapid movements, third-party funding and unusual resale patterns.
- Flagged activity is held and reviewed by the Head of Legal, Risk & Compliance (the Head of Finance until appointed).
- Suspicious transactions are reported to the Financial Intelligence Centre as the law requires.

CMP-R02 Data protection

Personal data is protected under Rwandan law and a full copy always stays in Rwanda.

RULE

- Registration with the NCSA under Law N° 058/2021; data minimised and retained per schedule.
- AES-256 at rest; TLS 1.2+ in transit; ID and account numbers also encrypted in the application.
- A copy of all personal and financial data is always held in Rwanda.
- Production data is never copied to development or staging.
- Personal-data breaches reported to the NCSA within 48 hours.

CMP-R03 Complaints

Every complaint gets a reference number and a fast answer.

RULE

- Channels: in-app, e-mail and WhatsApp Business. Every complaint gets a reference number.
- Acknowledged within 4 hours; resolved within 48 hours, or the customer is told why and when.
- Escalation: Head of Legal, Risk & Compliance, then the CEO. The customer may go to the CMA at any stage.

ACCEPTANCE CRITERIA

- A complaint unanswered at 4 hours is flagged on the admin dashboard.

CMP-R04

Marketing

Promotion is honest and always carries the warnings.

RULE

- All marketing carries the sandbox notice and the risk warning, and never claims authorisation beyond the sandbox.

16. Notifications

Every message comes from a recorded event. Delivery receipts are logged.

NTF-R01

Event list

The list of messages the system must send.

RULE

- Sandbox notice and verification results (in-app, e-mail).
- Raise funded, raise refunded, disbursement made (in-app, e-mail; SMS to the business).
- Business: D−14 funding reminders; D−10 upload reminder; D−14 visit-ready checklist; report sealed, 24-hour dispute window open and closing.
- Investor: monthly sealed report published; payout credited; report late; rating band change.
- Arrears: notice at D; daily reminders from day 1; day-7 contact; day-30 legal demand; day-31 default (business and all holders; in-app, SMS, e-mail).
- Market: listing sold or part-sold; reservation started and ended; listing expired; halt and resumption.
- Wallet: deposit received; withdrawal sent or held.
- Security: new device, password or payout-account change.
- Any change of terms or halt (all affected users). Prospectus published or new version; raise paused or cancelled after a material change; Readiness Report ready, requirement due, 14 days left or overdue, stage change (business only); repeat raise available, paused or cancelled; hold placed and released (investor).

ACCEPTANCE CRITERIA

- Every event above produces a logged message with delivery receipt.

17. Admin console and CMA supervision

ADM-R01 Roles

Staff see and do only what their role allows.

RULE

- Roles: Analyst, Treasury, Compliance, Superadmin. Permissions checked on the server for every record.

ADM-R02 Sensitive actions

Big actions need one authorised person and a written reason.

RULE

- Manual ledger correction (as a linked entry), market halt, policy or rate change: one authorised staff member with a mandatory reason, fully logged.

ACCEPTANCE CRITERIA

- The confirm button stays disabled until a reason is entered.

ADM-R03 Support view

Support can look at a user’s screen but can never act for them.

RULE

- "Act-as" view is read-only, time-boxed and logged.

ADM-R04 Queues

Staff work from queues with deadlines.

RULE

- Queues for KYC/KYB review, screening matches, disputes, surveillance cases, withdrawal holds, reconciliation exceptions and complaints, each showing its deadline.

ADM-R05 Policy changes

Every rule number in this document is changed the same controlled way.

RULE

- Rates, thresholds and limits are versioned data. A change records who, why and when, applies only from its effective time, and never changes issued notes. During the sandbox, changes need CMA agreement.

ADM-R06

CMA supervisor seat

The CMA can watch the live platform at any time, without being able to change anything.

RULE

- Read-only live view of originations, holdings, trading, CPA reports, reconciliation and exceptions, and every past decision with its inputs.
- Scheduled exports for quarterly reports.

ACCEPTANCE CRITERIA

- The supervisor account has no write permission anywhere.

ADM-R07

CMA alerts

The CMA is told automatically when key things go wrong.

RULE

- Automatic alerts to the CMA when PAR30 exceeds 1.5%, a CPA deadline is missed, reconciliation breaks or the market is halted.

18. Sandbox limits and continuity

SBX-R01

Hard limits

The system refuses anything beyond the sandbox limits.

RULE

- At most 100 businesses and 10,000 investors; total principal outstanding at most RWF 5,000,000,000; RWF only; customers resident in Rwanda.
- A raise that would push principal outstanding above the cap cannot open.
- No new products or features without CMA approval.

ACCEPTANCE CRITERIA

- The 10,001st investor sign-up is queued, not verified.

SBX-R02

Wind-down

If Rozine must stop, every investor is looked after until every note ends.

RULE

- Stop new business the same day; notify the CMA and all users.
- Refund every commitment in unfunded raises in full.
- Service every issued note to maturity (at most 6 months), funded by the RWF 10,000,000 wind-down reserve.
- A back-up servicer named before go-live takes over if Rozine cannot continue, using the ledger, schedules and business wallets handed over.
- Free withdrawals of all wallet balances to users' own accounts.
- Records preserved and handed to the back-up servicer and the CMA.

ACCEPTANCE CRITERIA

- A wind-down switch blocks new listings, checkouts and listings on the market in one action, and leaves collections and payouts running.

19. Prospectus

Every note has a Rozine-branded prospectus, assembled by the system from verified data and the few inputs only the business can give. It publishes itself when every gate passes.

PRO-R01

Contents

Every prospectus has the same 16 sections in the same order.

RULE

- Offer summary · The business · Purpose and use of funds · Financial performance (3 years) · Forecast for the term · Management and ownership · Terms of the note · Repayment schedule · What an investor receives per fee band · Fees · Rating label and its factors · Investor rights · Risk factors · CPA verification statement · Declaration by the business · Statement by Rozine and document record.
- Every page carries the Rozine logo, the note reference, the version and the page number.
- CPA-verified sections are filled by the system and are read-only for the business.

ACCEPTANCE CRITERIA

- A business cannot edit any figure the CPA verified.

PRO-R02

What the business provides

The business writes only what Rozine cannot know.

RULE

- Purpose (80–600 characters) · Use-of-funds lines · Forecast for each month of the term · Assumptions and downside · Profiles of every director, 10%+ owner and the official representative (40–300 words) · Largest customer's share of revenue · At least 3 business-specific risks, picked from common risks for its sector and edited · E-signature.
- The forecast is pre-filled with the verified 3-month average; the business adjusts only where it has evidence.

PRO-R03

Automatic gates

The business can only sign when all 12 gates pass. Each failure shows on its own section with the fix.

RULE

- P-G01 every section complete · P-G02 latest sealed report ≤ 35 days old · P-G03 every name matches KYC and RDB · P-G04 use-of-funds lines + 3% platform fee = principal, to the franc · P-G05 any line ≥ 20% of principal has a quote or invoice within ±5% · P-G06 each forecast month within ±25% of verified average, or a signed contract attached · P-G07 any forecast month below 1.25 coverage needs a downside line · P-G08 largest customer ≥ 25% adds a concentration risk that cannot be deleted · P-G09 at least 3 business risks · P-G10 no prohibited claims ("guaranteed", "risk-free", "safe investment" and equivalents in Kinyarwanda and French) · P-G11 field lengths within limits · P-G12 signature by the official representative, unlocked last.
- There is no review queue. Passing all gates locks and publishes the prospectus.

ACCEPTANCE CRITERIA

- "Sign and submit" is disabled while any gate fails.
- No staff role can approve, edit or publish a prospectus.

PRO-R04

Lock, publish and record

A published prospectus can never change; a change makes a new version.

RULE

- On signature the system renders the PDF, stamps version, lock time and SHA-256 fingerprint, adds a QR code to the live listing, stores it permanently and opens the 30-day raise.
- Each checkout line stores the prospectus version and fingerprint (KYC-R05).
- The prospectus stays attached to the note and to every unit, including units bought on resale.

ACCEPTANCE CRITERIA

- The fingerprint of a stored PDF matches the one recorded at lock.

PRO-R05

Material changes

A material change is detected automatically and handled without staff.

RULE

- Detected from: the CPA report (revenue or cash moves more than 20% against the prospectus, a new debt, a director change, a legal claim); the registry (change of shareholders or directors; tax clearance expired); or the business declaring a change.
- During a raise: the raise pauses and its clock stops; the business updates the affected sections under the same gates; the new version locks and every committed investor receives it with a change summary. Investors may withdraw until 100% (INV-R03).
- Not updated within 7 days: the raise is cancelled and every hold released (LED-R02).
- After disbursement: a new version is issued for holders and resale buyers. Terms never change.

ACCEPTANCE CRITERIA

- A paused raise neither fills nor expires while paused.

20. Investment readiness

Readiness grows each business in step with its own size. It is shown only inside the Business App and never changes a label, a return or any note's terms.

RDY-R01

Two size drivers

Stage and requirements come from two verified numbers.

RULE

- VMR: verified monthly revenue, the average of the last 3 sealed reports.
- HC: headcount on the latest RSSB declaration, sighted by the CPA each month; contractors and casual workers excluded.

RDY-R02

Stages

Four stages by VMR (Proposed, OD-21).

RULE

- 1 · Foundation: RWF 2.5M to under 10M · 2 · Growth: 10M to under 30M · 3 · Scale: 30M to under 80M · 4 · Market: 80M and above.
- The stage moves when the 3-month VMR crosses a threshold, up or down. Requirements already triggered stay in force.

ACCEPTANCE CRITERIA

- One month above a threshold never changes the stage.

RDY-R03

Requirements

Size triggers structural requirements, each with a grace period (Proposed, OD-21).

RULE

ID	Trigger	Requirement	Grace
C1	Always	Tax clearance and RSSB contributions current	30 days after expiry
F1	Always	All business money through business-named accounts; ≥ 90% of verified revenue traceable to them	Entry requirement
F2	VMR ≥ 10M	Qualified accountant, employed or contracted; accounting software in use	90 days
F3	VMR ≥ 30M	Full-time qualified finance manager (CPA, ACCA or equivalent, ≥ 3 years); monthly management accounts	120 days
F4	VMR ≥ 80M	Annual audit under IFRS for SMEs by an ICPAR auditor other than the Rozine CPA; payments prepared and approved by different people	Next year-end
P1	HC ≥ 10	Written contracts and RSSB registration for every employee	60 days
P2	HC ≥ 30	Named HR lead or contracted HR provider; written HR policy	90 days
G1	VMR ≥ 30M, or Rozine principal ≥ RWF 50M	Board of ≥ 2 directors meeting quarterly with minutes; written payment delegation	120 days
G2	VMR ≥ 80M	At least one independent director; governance code; related-party register	180 days

- Status: Met → Due → Overdue → Met; Met → Lapsed (60 days) → Met or Overdue. The CPA confirms each with the evidence listed in the visit (VIS-R01).
- Overdue blocks the next raise (REP-R02) and removes Ready status.

ACCEPTANCE CRITERIA

- A requirement moves from Due to Overdue on the exact day its grace ends.

RDY-R04

Three signals

Three measures show whether the business is managed well.

RULE

- Record Gap (CPA audit): (|declared − verified revenue| + |declared − verified costs|) ÷ (verified revenue + verified costs), 3-month average.
- Cash Lead (ledger): days between the full instalment reaching the wallet and D; the lowest of the last 3 instalments.
- Forecast Error (ledger + audit): |forecast − verified revenue| ÷ verified revenue, 3-month average, with its bias.
- Targets by stage are in Section 3. A business with no instalment yet has no Cash Lead.

ACCEPTANCE CRITERIA

- Cash Lead is computed from wallet timestamps only.

RDY-R05

Ready status

One line in the Business App, e.g. "Stage 2 · Ready".

RULE

- Ready: every requirement due is Met, all signals on target for 3 consecutive sealed reports, and the stage's core syllabus passed.
- Lost: any requirement Overdue, or any signal off target for 2 consecutive reports.

RDY-R06

Monthly guidance

After each sealed report, the app tells the business each fact, the verdict and one action. It never asks a question.

RULE

- Each line: value, target, on or off target, the cause from the CPA's cause code, and one action.
- Help is tool-neutral ("record every cash sale the same day in your books"), with downloadable templates for businesses without software. Rozine builds no bookkeeping tools.
- Only two in-app tools exist, both part of existing flows: Auto-save in the wallet and the pre-filled forecast at D−10.

ACCEPTANCE CRITERIA

- Every guidance line contains a value, a target, a verdict and one action, and no question mark.

RDY-R07

Academy

Questions appear only here.

RULE

- Each module: 8–12 flashcards, then a 10-question test; pass mark 80%; retake after 24 hours with reshuffled questions. English and Kinyarwanda.
- Core modules per stage are required for Ready. Trigger modules unlock when a requirement becomes Due; remedy modules unlock from a missed signal's cause; the next stage's core opens as a preview.
- The syllabus is the same for every business at the same stage. Content author: OD-24.

RDY-R08

Milestones

Automatic milestones toward the capital market.

RULE

- Bond track: stage 3 or 4, Ready for 6 consecutive months, ≥ 3 Rozine notes with every instalment collected on D, audited annual statements uploaded. The business gets a bond-readiness file.
- RSE Investment Clinic referral: limited company, ≥ 3 years trading, no major proceedings, stage 3 or 4 Ready for 12 months. Sent with the business's consent, once the agreement in OD-23 exists.

21. Repeat borrowing

A business that repays well borrows again in short notes, as often as its verified numbers allow. Every check is automatic.

REP-R01

Purpose

A new note never repays an old one.

RULE

- Use of funds may not include repaying any Rozine note. The CPA checks actual use at the next visit; a breach ends repeat eligibility for 6 months.

REP-R02

Eligibility

The system shows the repeat card only when every check passes, and lists what is missing otherwise.

RULE

- No instalment overdue on any Rozine note.
- Latest sealed report ≤ 35 days old.
- No readiness requirement Overdue.
- Waits respected (REP-R06).

REP-R03

Overlap

A raise may open in the final month of the current note, so there is no gap between notes.

RULE

- Allowed only if every instalment on the current note was collected on D.
- At most one note repaying and one raising.
- Opening early reserves the final instalment of the current note in the business wallet; the raise cannot open until it is deposited.
- During the overlap, the new instalment plus the remaining current instalment must pass coverage together.

REP-R04

Verification refresh

A repeat issuer is not re-verified from scratch.

RULE

- The CPA verifies only the new months and any changes; the history carries over. 12 months of statements suffice.
- The prospectus pre-fills from the last version; all gates apply.

REP-R05

Sizing

Repeat notes grow steadily, never in jumps.

RULE

- Offered principal = lowest of: the request, the coverage limits, 35% of annual revenue less Rozine principal outstanding, 1.5 × the last repaid note, RWF 100M.

EXAMPLE

Verified monthly cash 7,000,000. Current note: 4,560,000 instalment, one left. Request RWF 30M, Strong, 6 months: instalment 5,700,000. Overlap: 7,000,000 ÷ (5,700,000 + 4,560,000) = 0.68, fails. Option A: open after the final instalment, 7,000,000 ÷ 5,700,000 = 1.23, fails; offer at 1.25 = RWF 29,470,000. Option B: open now for up to RWF 4,520,000. The app shows both.

ACCEPTANCE CRITERIA

- The offer never exceeds 1.5 × the last repaid note.

REP-R06

Waits and exceptions

Short, automatic waits replace manual review.

RULE

- Any late instalment on the last note: next raise only 30 days after full repayment.
- Raise not 100% in 30 days: holds released; retry after 14 days.
- Final instalment of the current note missed while a repeat raise is open: the raise pauses at once; not cleared in 7 days, it is cancelled and holds released.
- A requirement turning Overdue during a raise: the raise continues; the next one is blocked.

REP-R07

Track record

Each repaid note adds to a public record on the listing.

RULE

- Notes repaid · instalments collected on D ÷ all due · total repaid to holders · most days any instalment was late.

22. Guided visits and business inputs

The CPA never has to guess what to check, and the business always knows what to prepare. Both lists come from one source.

VIS-R01

Monthly visit steps

One step per screen, in fixed order. Nothing can be skipped; steps that do not apply this month do not appear.

RULE

- Each step states: Do (one plain instruction) · Enter (exact fields, units and an example) · Upload (a box, where proof is needed) · Done when (the rule checked before the next step opens) · a "How to" guide.
- Steps: 0 visit pack · 1 check in (location within 300 m and one photo) · 2 confirm the official representative · 3 money coming in, per account, with statements · 4 cash sales not deposited · 5 costs in six categories · 6 sample check of 10 transactions · 7 owner drawings · 8 other loans · 9 explain every difference with a cause code until the explained amounts equal the total difference · 10 staff count from RSSB · 11 requirements due, item by item · 12 tax and RSSB expiry dates · 13 use of loan money (active note) · 14 changes · 15 check the result · 16 seal with PIN.
- Cause codes: sales not recorded · expense without proof · personal spending · wrong month · entry error · counted twice.
- Works offline; every entry is timestamped. Plain words only.

ACCEPTANCE CRITERIA

- The seal button is disabled while any step is open.
- Explained differences must equal the total difference to the franc.

VIS-R02

Other visits

Baseline, refresh and late visits use the same step format.

RULE

- Baseline adds: 36-month history grid with statements · premises and assets · identity of directors and owners · registration and tax · date trading started · management profiles confirmed.
- Refresh: monthly steps; history carries over.
- Late (day 7): check in · money available now with proof · reason from a fixed list · seal. Nothing is negotiated.

VIS-R03

Visit-ready checklist

From D−14 the business sees exactly what the CPA will ask for, generated from the same steps.

RULE

- Shown inside the repayment reminder, not as a separate task.
- Only this month's items appear; documents the CPA already holds are not asked again.
- Each item: what it is, what it must show, where to get it, and a "Show example" image. The business ticks when ready; early upload is optional.
- Reminders: D−11 lists only unticked items; one final reminder the day before the visit.
- The 10 sampled transactions are shown only 3 days before the visit.

ACCEPTANCE CRITERIA

- The checklist and the CPA's steps always list the same documents.

VIS-R04

Monthly submission

About 3 minutes at D−10.

RULE

- Six screens: money in · costs in the CPA's six categories · paid to owners · next month's forecast, pre-filled with the 3-month verified average (a change above 25% needs a signed order) · four yes/no changes · one-line summary and submit.

VIS-R05

Uploads

Only what proves a figure is collected.

RULE

- Allowed: statements, invoices, receipts, contracts, loan agreements, certificates, minutes, audit reports, premises and asset photos.
- Never collected: employee names or personal details (the RSSB total page only, names covered), passwords and PINs, medical records, anything about the CPA's other clients.
- Uploads are encrypted and visible only to the CPA, the business and the system. Investors see the sealed report, never the documents.

23. How the apps stay in step

Every event below is written once by the core and read by every app. Each status has a defined way out, so nothing can stall.

Event	Source	Changes	Apps updated
Monthly figures submitted (D−10)	Business App	Declared figures, forecast locked	Auditor (visit pack)
Report sealed	Auditor App	Verified figures, label, signals, stage, requirement status, prospectus data	Investor (report, label) · Business (Readiness Report) · Admin monitors
Report disputed	Business App	Note untradeable until decided	Investor · Market · Admin queue
Gate fails / all gates pass	Core	Prospectus state	Business (fix shown) · on pass: Investor (listing live)
Material change detected	Auditor App · registry · Business App	Raise paused, new version required	Business · committed investors
Commitment made / withdrawn	Investor App	Hold placed / released; % filled	Investor wallet · listing progress · Business raise view
Raise reaches 100%	Core	Holds convert, disbursement, holdings, schedule, CPA fee share	All four apps
Day 30 without 100%	Core	Holds released	Investor · Business
Instalment funded	Ledger	Cash Lead, reminders stop	Business
Collection on D	Core	Payouts, earnings fee, CPA share	Investor · Business · Auditor earnings
Late: D, D+7, D+30, D+31	Core	Charges, late visit task, default	Investor · Business · Auditor (day 7) · Admin · CMA alert
Requirement Due / Overdue	Core	Requirement status, Ready status, repeat eligibility	Business · Auditor (next visit steps)
Repeat eligibility opens	Core	Repeat card, reserved instalment	Business
Resale settles	Investor App	Units, money, buyer band	Investor (both sides) · Admin
Consent wording changes	Admin (policy version)	Re-acknowledgement due	Investor (next app open)

Item	States and every exit
Prospectus	Draft → Live (all gates pass) · Draft untouched 60 days → Archived (restart any time) · Live → Paused (material change) → Live (updated) or Cancelled (7 days) · Live → Closed (raise ends) → Superseded (new version)
Raise	Open → Funded (100%) or Refunded (day 30) · Open → Paused → Open or Cancelled
Hold	Held → Converted (raise fills) or Released (withdrawn, refunded, cancelled)
Report	Visit open → Sealed → Final (24 hours, no dispute) · Sealed → Disputed → Upheld or Corrected (published with reason)
Note	Current → Late → Current (cure before day 31) or Default → Closed (recovery ends)
Requirement	Due → Met or Overdue · Overdue → Met · Met → Lapsed → Met or Overdue
Readiness	Building ↔ Ready
Repeat card	Hidden → Available (all checks pass) → Raise opened or Hidden (check fails)

24. App requirements

What each app must let its user do. Parity rule: every feature and copy change applies to both the mobile and desktop version of the same app.

APP-I01

Investor app

Find deals, buy through the cart, watch holdings, read reports, trade and manage money.

RULE

- Deals: every open note with rating band and score, return, tenor, left to fill and Add to cart. Fully funded notes show as filled with no Add to cart.
- Cart: fifth item in the bottom navigation (desktop: in the sidebar); fixed cart total with band preview; checkout button directly above the navigation bar; source-of-funds sheet; confirmation per INV-R05.
- Portfolio: active and matured holdings, payouts, sealed reports, rating history and arrears status.
- Market: create, cancel and reprice listings; buy with reservation countdown; order history.
- Wallet: deposit, withdraw, Total, Committed and Available with the list of holds (LED-R02), fee and payout history. Deals and deal page: prospectus reader and download, new-version banner. Checkout: no tick boxes; prospectus confirmation in the pay button (KYC-R05). Readiness is never shown.
- Desktop overlays open inside the column of the control that triggered them.

APP-B01

Business app

Apply, get funded, report monthly and repay.

RULE

- Apply: KYB, statement upload, outcome with reasons, offer acceptance and collection authorisation by the official representative.
- Raise: live progress, funded and refunded notices, disbursement receipt.
- Listing Builder with live prospectus preview and gates (PRO-R02, PRO-R03). Monthly: visit-ready checklist from D−14, the 3-minute submission at D−10 (VIS-R04), CPA visit status, 24-hour dispute. Readiness tab (Section 20). Repeat borrowing card and planner (Section 21).
- Wallet: deposit, withdraw, next instalment and amount still needed.
- Arrears: amount owed, charges so far, next charge date, day-31 consequences, one-tap payment.
- Early repayment quote and payment.

APP-A01

Auditor app

Do and seal field verification, offline if needed.

RULE

- Accreditation with ICPAR licence and conflict declarations.
- Assignments within 30 km with deadlines; Flash Audits flagged with the 24-hour clock.
- ISRS 4400 checklists; in-app camera only, live location; works offline, data encrypted and remotely wipeable.
- Guided visits per VIS-R01 and VIS-R02: one step per screen, nothing skippable, upload box where proof is needed, "How to" guide on every step. One CPA seals. Seal blocked while any variance is unexplained or any step is open.
- Earnings statement: 40% of platform fee and 25% of earnings fee per note.

APP-D01

Admin console

Run operations without ever being able to bend the rules.

RULE

- Queues per ADM-R04; halts per SEC-R08; policy versions per ADM-R05; reconciliation dashboard; sandbox-limit usage; wind-down switch.
- Read-only monitors for prospectus, readiness and repeat borrowing. No screen offers an underwriting override, prospectus approval or ledger edit.

25. Open decisions

Details the submitted documents do not settle. Each needs a named decision before the rule that references it is built. Where a default is proposed, the team may build to it unless told otherwise.

ID	Decision needed	Proposed default or note
OD-01	Coverage between 1.25 and 1.50	Proposed: counter-offer at 1.50 capacity. Alternative: approve as requested.
OD-02	Existing debt payments in CFADS	Proposed: greater of the historical monthly average and the highest scheduled payment during the term; replace with CRB data once integrated.
OD-03	Trimming exceptional months	The submitted documents say exceptional months are trimmed. You earlier preferred not to trim, to protect seasonal businesses. Decide the method, or confirm no trimming and correct the submitted wording.
OD-04	Rating formula	How the verified facts (time trading, profitability, consistency, size) produce Strong, Stable or Distressed.
OD-06	CPA rotation	How many consecutive months one CPA may verify the same business.
OD-07	Disputes	Proposed: desk review decided within 5 business days. Silence for 24 hours means the report stands.
OD-08	Flash Audit selection	How businesses are picked and how often.
OD-09	Due dates at month-end	Proposed: a due date on the 29th–31st moves to the last day of shorter months.
OD-10	Defaulted notes in active capital	Proposed: excluded from active capital from the day of default.
OD-11	Order of applying part-payments	Proposed: oldest instalment first, principal and return before late charges.
OD-12	Rounding of payouts	Proposed: compute exactly, pay whole francs, and carry the remainder to the final payout.
OD-13	Future instalments after default	Whether the whole remaining balance becomes due at day 31, or each instalment keeps its own date.
OD-14	Minimum investor age	Proposed: 18.
OD-15	Band on units bought in resale	Proposed: the buyer’s band at settlement, including the purchase in active capital.
OD-16	Surveillance thresholds	Numeric triggers for each SEC-R10 pattern.
OD-17	Unusual withdrawal criteria	Triggers for the 24-hour hold.
OD-18	Fee sweep timing	Proposed: daily, after reconciliation.
OD-19	Pay for Flash Audits and arrears visits	Whether these are covered by the fee shares or paid separately.

ID	Decision needed	Proposed default or note
OD-21	Readiness thresholds	Stages, requirement triggers, grace periods and signal targets as in Sections 3 and 20; reviewed against repayment data after 6 months.
OD-22	Per-investment risk confirmation	Check whether the regulation requires a risk confirmation at each investment. If so, the checkout line in KYC-R05 is extended to cover it, with no tick box.
OD-23	RSE Investment Clinic referral	Agreement with the RSE before referrals start.
OD-24	Academy content author	Proposed: the Auditor Network, written once and applied to all.
