

MVP SPECIFICATION

The Rozine ecosystem, built to a finished standard

Four applications and a launcher, reading and writing one core. This document specifies every feature each one carries, the states it must handle, and the criteria that decide whether it is done. It is written so that nothing here is a matter of taste.

4 + 1 APPS AND A LAUNCHER	1 SOURCE OF TRUTH	3 BUILD PHASES	Zero DEAD-END STATES
-------------------------------------	-----------------------------	--------------------------	--------------------------------

CONTENTS

1	The spine	shared rules	4	Investor	retail and funds
2	Business	borrowers	5	Admin	staff oversight
3	Auditor	CPA partners	6	Suite and demo	what a visitor sees

Part 1 · The ecosystem spine

Four apps and a launcher, reading and writing one core. No app holds its own copy of a balance, a rating or a repayment. This part fixes the rules the four app sections inherit.

4 + 1
APPS

1
SOURCE OF TRUTH

Zero
DUPLICATE STATE

THE FIVE VIEWS

One login, one identity.

RETAIL & FUNDS
Investor
mobile and desktop

BORROWERS

mobile and desktop

CPA PARTNERS
Auditor
field-first, both views

STAFF
Admin
desktop, role-gated

ENTRY
Suite
launcher and role switch

WHAT CORE OWNS

Identities and roles, the double-entry ledger, wallets, deals and notes, the rating engine, repayment schedules, audit reports, the secondary market book, the loss reserve, and the append-only event log. Every figure any app displays is read from here.

★ THE BAR

Every number on screen traces to a ledger entry. No dead-end states: every screen has a next action, including its errors. Usable on a 3G phone. Close enough to the real thing that a user cannot tell it is an MVP.

WHAT APPS OWN

Own layout, navigation, view state, drafts

Never own balances, ratings, schedules, prices

Write via core commands only, never raw state

Test delete an app; no data is lost

EVERY SCREEN HANDLES

Empty explains itself, offers the next step

Loading skeletons, never a blank frame

Error says what failed and how to retry

Gated names the missing condition, not "denied"

MONEY MOVEMENT

Method double entry, every movement posted twice

Separated client wallets, reserve, company cash

Idempotent a retried payment cannot post twice

Reversal by contra entry; nothing is deleted

INTEGRATIONS

Mobile money deposits and payouts, both networks

Bank rail institutional deposits and settlement

Identity national ID and RDB company lookup

ICPAR CPA licence status on a partner

AUDIT TRAIL

Logged actor, action, before, after, timestamp

Covers every state change, not just money

Append-only no edit path exists, for anyone

Exportable handed to RCMA on request

NOT IN THE MVP

No public API for institutions

No native app stores; web only

No Kinyarwanda beyond the public pages

No multi-currency, multi-country, or FX

THE ONE FLOW, END TO END

Every app touches this chain exactly once

01 BUSINESS

Applies

writes an application

02 AUDITOR

Verifies

files evidence, not a verdict

03 CORE

Rates

score, yield, cap, schedule

04 INVESTOR

Funds

notes issued from a wallet

05 ADMIN

Oversees

disburses, monitors, reports

Acceptance criteria

SPINE ACCEPTANCE CRITERIA

Each is a pass or fail. The MVP is not shippable while any one of them fails.

CRITERION	HOW IT IS PROVEN
1 Every displayed figure traces to the ledger	Pick any number in any app; a staff user can open the entries behind it in Admin.
2 The ledger balances at all times	Sum of all entries is zero. A daily job asserts it and fails loudly.
3 Client money is never company money	Wallet, reserve and operating balances report separately and reconcile independently.
4 One action, one effect	Submitting the same payment twice produces one ledger movement, not two.
5 Nothing is ever destroyed	Corrections post a contra entry. No delete or overwrite path exists in any app.
6 Every state change names its actor	The event log answers who, what, when, before and after, for any record.
7 No rating is ever chosen by a human	The engine computes from filed evidence. No app exposes a way to set a score.
8 A change in core shows everywhere	A repayment posted in Admin appears in Investor and Business without a reload.
9 No dead ends	Every empty, error and gated state names a next action a user can take.
10 Works on a 3G phone	First screen interactive under 5 seconds on throttled 3G; no layout shift after.
11 A user only ever sees their own data	Role and ownership are checked in core, not hidden in the interface.
12 A cold reload loses nothing	Close the tab mid-flow and return: drafts, position and state are where you left them.

WHO CAN DO WHAT

Enforced in core. An app never decides what a role may do.

ACTION	INVESTOR	BUSINESS	AUDITOR	STAFF	ADMIN
Apply for a raise	—	Yes	—	—	—
File audit evidence	—	—	Yes	—	—
Set a rating or yield	—	—	—	—	Nobody
Buy or sell a note	Yes	—	—	—	—
Disburse a funded raise	—	—	—	Request	Approve
Freeze a note or party	—	—	Flag	Request	Yes
Change a fee or rate	—	—	—	—	Yes, logged
Read the event log	Own only	Own only	Own files	Scoped	All
Delete anything	—	—	—	—	Nobody

BUILD PHASES

PHASE 1

The chain works once

Core, ledger, roles, event log. One business applies, one CPA verifies, one investor funds, one repayment posts. No polish yet, no secondary market.

PHASE 2

Every state is handled

Empty, loading, error and gated states across all four apps. Monthly reports, freezes, recovery plans, Admin oversight and reconciliation.

PHASE 3

It feels finished

Secondary market, Plus automation and bands, charts and reporting, 3G performance pass, accessibility pass, the demo dataset RCMA sees.

Part 2 · Business

The borrower's app. Apply, get verified, get funded, then report every month for the life of the note. Everything a business owes and everything it has been charged is visible from the first screen.

48 hrs **3 - 6 mo** **By the 7th**
 APPLY TO FUNDED TERM MONTHLY REPORT

THE JOURNEY

One path, no branches.

STEP 1

Register

company lookup and two signatories

STEP 2

Apply

five years of statements, term, amount

STEP 3

Get audited

a CPA visits; you upload nothing twice

STEP 4

Get funded

watch the raise fill, then disbursement

STEP 5

Report & repay

monthly figures, monthly instalment

WHAT A BUSINESS SEES

Its rating and what moves it, the exact amount it qualifies for and why that number, every charge before signing, the full repayment schedule with dates, how much of the raise is filled in real time, and every audit its CPA has filed.

★ THE HONESTY RULE

No cost is ever revealed after a decision. The total charge, the instalment and the effective rate appear on the same screen as the Accept button, in the same size type as the amount being borrowed.

ONBOARDING

Lookup RDB company search prefills the profile

Signatories two directors, each verified by ID

Documents certificate, resolution, tax clearance

Eligibility margin gate checked before you apply

APPLICATION

Statements five years, uploaded or entered by hand

Calculator shows your ceiling as you type

Term 3 to 6 months; the rate reacts to it

Draft saved continuously, resumable

RATING

Score computed by the engine, never by staff

Explained which factors helped and which hurt

Ceiling 35% of annual revenue, or 1.25x cover

Refusal says exactly why, and what to fix

THE RAISE

Live fill notes sold, amount remaining, time left

Charge one flat figure, shown before signing

Signing digital acceptance, copy of the note

Disbursement to a named account, with a receipt

MONTHLY DUTIES

Report cash flows, stock, photos, filed by the 7th

CPA your assigned partner, named and reachable

Late grace to day 7, then a penalty, then default

Recovery file a plan; the penalty is waived

REPAYMENT

Schedule every instalment, date and split

Pay mobile money or bank, receipt each time

Early settle ahead with no penalty

History a clean record improves the next rating

ACCEPTANCE CRITERIA

CRITERION	HOW IT IS PROVEN
1 A business never enters the same figure twice	Anything already filed, audited or derived is read back, not re-asked.
2 The ceiling is explained, not just stated	The app names which constraint bound the number and what would raise it.
3 Every cost is visible before acceptance	The charge, the instalment and the effective rate sit beside the Accept button.
4 A refusal is actionable	It names the failed test and what would need to change to pass it.
5 The schedule never disagrees with the ledger	Amounts and dates are read from core; the app computes none of them.
6 Filing a monthly report takes under five minutes	On a phone, on 3G, including photographs.
7 Arrears are impossible to miss	Any overdue state is visible on the dashboard, not buried in a tab.
8 A frozen deal explains itself	It names the trigger, who to contact, and what clears it.

SCREENS

SCREEN	CARRIES	STATES IT MUST HANDLE
Dashboard	next payment, rating, live raise	no deal yet · frozen · in arrears
Apply	statements, term, live ceiling	draft · ineligible · under review
Rating	score, factors, ceiling	pending audit · refused, with reasons
Raise	fill progress, charge, sign	not yet listed · fully funded · expired
Repayments	schedule, paid, upcoming	paid ahead · overdue · defaulted
Reports	monthly filings and their status	due now · late · rejected by CPA
Audits	every report the CPA filed	awaiting first audit · CPA reassigned
Wallet	disbursements and payments out	empty · pending settlement · failed
Profile	company, signatories, documents	incomplete · document expired

PHASING & SCOPE

Phase 1	Registration, application, statements, rating display, raise progress, signing, disbursement and the repayment schedule.
Phase 2	Monthly reporting, the CPA thread, arrears and penalties, recovery plans, payment history, all four states on nine screens.
Not in MVP	No concurrent raises per business, no invoice or inventory financing, no accounting-software integration, no messaging beyond the CPA thread.

Part 3 · Auditor

The CPA partner's app, built for a phone in a shop with poor signal. Capture evidence, never a verdict. Every figure filed here becomes a rating the engine computes.

48 hrs **By the 7th** **Offline**
TO COMPLETE A VISIT MONTHLY FILING FIELD CAPTURE

A VISIT	STEP 1 Accept	STEP 2 Prepare	STEP 3 Capture	STEP 4 Reconcile	STEP 5 File
Assigned, then closed.	a job in your district, with the file	last audit, open flags, what to test	records, stock and photos, on site	feeds against what is physically there	sign and submit; the engine rates it

WHAT A PARTNER SEES

Assigned jobs and their deadlines, the full history of every business they cover, what changed since their last visit, earnings per active note and when each payment lands, and their own quality score.

★ EVIDENCE, NOT OPINION

The app never asks a partner whether a business is creditworthy. It asks for figures, documents and photographs. No field anywhere in this app sets or influences a rating.

ASSIGNMENT

Queue	jobs in your district, nearest first
Accept	or decline with a reason, once
Clock	48 hours from acceptance, visible
Conflict	declare an interest; it reassigns

MONTHLY WORK

Cadence	every funded note, every month
Compare	this month against last, side by side
Flag	deterioration, with the figure behind it
Deadline	the 7th; a miss freezes the note

FLASH AUDIT

Checklist	the same tests every time, in order
Records	five years of statements, verified
Stock	counted, valued, photographed
Feeds	bank, mobile money and POS reconciled

EARNINGS

Rate	10% of the charge, paid from repayments
Visible	per note, per month, with dates
Floor	a minimum per note on small raises
Unpaid	Flash Audits earn nothing; said plainly

FIELD CAPTURE

Offline	works with no signal; syncs later
Photos	geotagged and timestamped at capture
Signature	the owner signs on the device
No edits	a filed report cannot be altered

STANDING

Quality	your score, and what moved it
Review	one file in ten is re-performed
Licence	ICPAR status checked continuously
Sanction	warned, suspended or decertified

SCREENS

SCREEN	CARRIES	STATES IT MUST HANDLE
Jobs	assigned work, deadlines, distance	none assigned · overdue · declined
Business file	history, last audit, open flags	first visit · reassigned to you
Checklist	the tests, in fixed order	part complete · offline, unsynced
Capture	photos, counts, documents	no signal · storage full · upload failed
Reconcile	feeds against counted stock	variance found · feed unavailable
File	review and submit, with signature	incomplete · submitted · rejected
Reports	everything you have filed	none yet · one late · one rejected
Earnings	per note, per month, upcoming	nothing earned yet · payment delayed

ACCEPTANCE CRITERIA

CRITERION	HOW IT IS PROVEN
1 A visit can be completed with no signal	Every capture step works offline and syncs without data loss when signal returns.
2 No screen asks for a judgement	No rating, grade, recommendation or approval field exists anywhere in the app.
3 A filed report is immutable	After submission there is no edit path; a correction is filed as a new report.
4 Photos cannot be back-dated or borrowed	Capture is in-app only, geotagged and timestamped. No gallery upload.
5 A partner knows what they will earn	Earnings per note and their dates are visible before accepting the work.
6 A variance is never silently accepted	Any figure outside tolerance forces a written explanation before filing.
7 Deadlines are unambiguous	The 48-hour clock and the 7th-of-month deadline appear as countdowns, not dates.
8 A conflict can always be declared	Declaring one reassigns the job immediately and logs the declaration.

PHASING & SCOPE

Phase 1	Assignment queue, the Flash Audit checklist, capture, reconciliation and filing. Online only.
Phase 2	Offline capture and sync, the monthly verification cycle, flags, earnings ledger, quality score and sanctions.
Not in MVP	No partner-to-partner handover mid-visit, no automated bank-feed pull, no ICPAR CPD credit filing, no desktop-only review tooling.

Part 4 · Investor

Retail and institutional in one app. Buy notes from RWF 5,000, hold to maturity or exit early, and see exactly what every deal cost and returned. Nothing is rounded, nothing is implied.

RWF 5,000
ONE NOTE

10 - 20%
FLAT YIELD

Any time
EXIT BEFORE MATURITY

THE JOURNEY

Deposit to exit.

STEP 1

Verify

ID, then a wallet in your name

STEP 2

Deposit

mobile money or bank, free

STEP 3

Choose

browse rated deals, read the audits

STEP 4

Fund

buy notes; the raise fills live

STEP 5

Collect

monthly capital and interest

WHAT AN INVESTOR SEES

Every deal with its rating, yield, term and the audit behind it. Their own position by note, business and sector. Money in, money out and money owed. The exact charge on every earning, before it is taken.

★ NO SILENT MATHS

Any figure derived from another is shown with its inputs. Yields are stated as both the flat rate and the annualised return. A projection is always labelled as one, never as a promise.

ACCOUNT

Verify national ID, then a wallet in your name

Deposit mobile money or bank; free, both ways

Withdraw same day, 0.5%, daily cap disclosed

Statements downloadable, per month, per tax year

HOLDING

Portfolio by note, business, sector and maturity

Schedule every instalment coming, with dates

Audits each monthly report as it is filed

Warnings a flag or freeze appears immediately

BROWSING DEALS

The card rating, yield, term, filled, time left

The audit read the CPA file before you commit

Filters sector, rating band, term, size

Sold out shown, not hidden, with a next date

GETTING PAID

Cadence capital and interest, monthly

Charge 8% to 4.5% on Plus, 10% on Free

Landing into your wallet, same day

Idle cash sits in the wallet at no fee

BUYING

Unit RWF 5,000 a note, no maximum

Costs itemised before you confirm

Net ROI shown after all charges, not before

Limits five notes per business, disclosed

REPORTING

Returns realised and projected, kept separate

Concentration exposure by business and sector

Losses shown gross, before reserve cover

Export a full transaction history, any period

EXIT TO ROZINE

What	we buy the holding onto our own book
Price	present value of remaining cash flows
Discount	by rating, time left and payment record
Blocked	past 45 days late; order book only

PLUS: HOW IT OPENS

Trigger	deploy RWF 1M in any rolling 30 days
Instant	the band opens on crossing, not month end
Holds	30 days minimum, then re-measures
Applies	forward only, never retroactively

SCREENS

SCREEN	CARRIES	STATES IT MUST HANDLE
Deals	rated deals, filters, live fill	none listed · all sold out · gated
Deal detail	the audit, the terms, the costs	sold out mid-read · frozen · withdrawn
Buy sheet	itemised cost and net ROI	below minimum · wallet short · cap hit
Portfolio	positions, returns, concentration	nothing held yet · a note in arrears
Note detail	schedule, audits, exit options	matured · frozen · defaulted
Market	inventory, your orders, the book	empty book · your order unfilled
Sell sheet	quote, discount, net proceeds	exit blocked · quote expired
Wallet	balance, in, out, pending	empty · withdrawal pending · failed
Automation	mandate, outcomes, charge band	not eligible · paused · cap reached
Reports	statements, returns, tax year	no history yet · period incomplete
Profile	identity, bank details, tier	unverified · document expired

THE ORDER BOOK

What	sell to another investor at your price
Control	name the unit price; edit until filled
Fee	0.5% taker, 0.1% maker
Honest	free, but slow and never guaranteed

PLUS: AUTOMATION

Mandate	a flat amount, or 1 to 50% of a raise
Filters	rating band and sector
Preview	deals, ticket and charge before saving
Cap	50% of any single raise

BUYING SECONDHAND

Source	Rozine inventory or another investor
Price	present value plus an acquisition fee
Fee	0.25% to 1.5%, inverted by rating
Carried	the audit history travels with the note

PLUS: THE LADDER

1M+	8% of earnings
5M+ / 25M+	7%, then 6%
75M+ / 150M+	5%, then 4.5%
Free	10%, with no automation

ACCEPTANCE CRITERIA

CRITERION	HOW IT IS PROVEN
1 Nothing is bought without its full cost on screen	The itemised charge and net return sit on the confirm sheet, above the button.
2 A projection is never dressed as a return	Realised and projected figures are visually distinct and separately labelled everywhere.
3 An exit quote is firm or absent	A quote either holds for a stated window or the app refuses to show one.
4 A blocked exit explains itself	It names the condition, the threshold crossed, and the order book as the alternative.
5 Concentration is impossible to ignore	Exposure by business and sector is on the portfolio screen, not a sub-page.
6 A frozen or defaulted note surfaces immediately	It appears on the portfolio screen the moment core marks it, without a reload.
7 Plus never surprises anyone	Crossing a band, holding it and losing it are each announced with the figure behind them.
8 A mandate cannot exceed its own cap	The 50%-per-raise limit is enforced in core; the app cannot save a rule that breaks it.
9 Every earning traces to a repayment	Tapping any interest figure opens the instalment and the note it came from.
10 The whole history is exportable	Any period, as a file, with charges itemised and reconcilable to the wallet.

PHASING & SCOPE

Phase 1	Verification, wallet, deposits, browsing, buying, portfolio, repayment collection and statements.
Phase 2	Audit files per note, flags and freezes, arrears visibility, concentration reporting, withdrawals and tax-year exports.
Phase 3	Secondary market both routes, Plus bands and automation with live outcome preview, charts and performance reporting.
Not in MVP	No public API, no discretionary managed portfolios, no in-app fund transfers between investors, no multi-currency holdings.

Part 5 · Admin

Staff oversight of the whole book. Approve what needs a human, watch what needs watching, and account for every movement. The one app where the regulator would start.

Every action
LOGGED

Daily
RECONCILED

Nothing
DELETABLE

THE DAY	FIRST Reconcile	THEN Queues	THEN Exceptions	THEN Partners	LAST Report
Queue-driven, not screen-driven.	yesterday closed and balanced	applications, disbursements, exits	arrears, misses, variances, freezes	audit quality and coverage	the numbers going out today

WHAT STAFF CAN DO

Approve disbursements, freeze a party or a note, waive a penalty against a filed recovery plan, reassign an audit, correct by contra entry, adjust a fee going forward, and export any record for a regulator.

★ WHAT STAFF CANNOT DO

Set or override a rating. Change a yield on a live note. Edit or delete a ledger entry, a filed audit or an event. Touch client funds outside a named, logged, reason-bearing action. These paths do not exist.

QUEUES

Applications	engine decision, evidence, one action
Disbursements	two-person approval above a threshold
Exits	requests against pool capacity
Escalations	anything a rule could not settle

PARTNER OVERSIGHT

Coverage	districts, capacity, unassigned work
Quality	sampled files, variances, sanctions
Licence	ICPAR status and expiry
Payouts	what each partner has earned

MONEY CONTROL

Reconcile	wallets, bank and mobile money, daily
Breaks	listed, aged, assigned, never hidden
Reserve	balance against the 5% floor
Contra	the only correction mechanism there is

PARTIES & ACCESS

Parties	businesses, investors, partners, staff
Freeze	with a reason, reversible, logged
Roles	staff permissions, granted and revoked
KYC	re-verification schedule and overdue

BOOK MONITORING

Arrears	by age, business, sector and partner
Triggers	the six halts, with the figure behind
Concentration	caps by borrower, sector, maturity
Recovery	plans filed, accepted, broken

REPORTING

Regulator	the pack RCMA receives, on demand
Board	monthly, from the same figures
Event log	searchable by actor, record or date
Export	any table, any period, reconcilable

Screens, acceptance and scope

SCREENS

SCREEN	CARRIES	STATES IT MUST HANDLE
Today	queues, breaks, what needs a human	all clear · a break unassigned
Applications	engine decision and its evidence	none waiting · missing audit
Disbursements	approved raises awaiting release	awaiting second approver · failed payout
Reconciliation	the three balances, side by side	out of balance · feed unavailable
Book	every live note and its health	none live · concentration cap breached
Exceptions	arrears, halts, variances	none open · one past escalation window
Partners	coverage, quality, licences, payouts	district uncovered · licence expired
Parties	all four party types, with history	frozen · KYC overdue
Event log	who did what, when, to what	filtered to nothing · export running
Reports	regulator pack, board pack, exports	period incomplete · figures still moving

ACCEPTANCE CRITERIA

CRITERION	HOW IT IS PROVEN
1 No action is possible without an actor and a reason	Every mutating control requires a logged reason before it will commit.
2 Nothing can be deleted or edited	No screen exposes delete or overwrite; corrections are contra entries.
3 Money movement above a threshold needs two people	A single staff account cannot release a disbursement past the stated limit.
4 No staff account can set a rating	The permission does not exist in core, so no interface can offer it.
5 Yesterday reconciles before today opens	The day cannot be closed with an unexplained break; breaks age visibly.
6 The event log answers any question about a record	Actor, action, before, after and timestamp, searchable and exportable.
7 A regulator can be given a full trail unaided	The export is self-describing: no staff explanation needed to read it.
8 A freeze is always reversible and always attributed	Both the freeze and the release carry a reason and an actor.

PHASING & SCOPE

Phase 1	Application queue, disbursement approval, party management, the event log and the ledger view.
Phase 2	Daily reconciliation, breaks, arrears and exceptions, recovery plans, partner oversight, reserve monitoring, reports.
Not in MVP	No automated collections dialler, no bulk data import, no configurable workflow builder, no third-party access accounts.

Part 6 · Suite and the demo

One entry point, one identity, four apps. Plus the dataset a visitor lands in, because the first ninety seconds of a demo decide whether the rest is heard.

One LOGIN **Four** APPS **90 sec** TO THE POINT

A VISITOR No setup, no empty screens.	ARRIVES Lands the suite, with roles explained	PICKS A role investor, business, auditor or staff	SEES A live book deals mid-raise, notes mid-term	TRIES An action buy, apply, file, approve	LEAVES With proof every figure traceable
---	---	---	--	---	--

THE LAUNCHER Signs in once, shows only the apps that identity holds, and switches between them without a second login. A user with two roles carries both; a visitor gets a guided way in rather than a blank form.	★ WHY THE DATASET MATTERS An empty product cannot be judged. The demo book is seeded so that every state a reviewer might ask about already exists somewhere in it: a healthy note, one in arrears, one frozen, one matured, one exited early.
---	--

THE LAUNCHER Sign-in one identity across all four apps Visible only the apps your role holds Switch no second login, no lost position Return lands where you left, per app	THE SEEDED BOOK Businesses across sectors and all three ratings Notes live, matured, in arrears, frozen Investors retail and a Plus fund with a mandate Partners several CPAs with filed histories	STATES ON DISPLAY Healthy a note repaying on schedule Stressed arrears, a halt, a recovery plan Exited one sold to Rozine, one via the book Refused an application the gate rejected
WHAT RCMA IS SHOWN Segregation the three balances, reconciled Trail any record, back to its first event No overrides the paths that do not exist Reporting the pack, generated live	WHAT A FUND IS SHOWN Deployment a mandate filling deals as they list Bands the charge ladder, and crossing one Liquidity both exit routes, priced Reporting concentration and realised return	PERFORMANCE 3G first screen interactive under 5 seconds Stability no layout shift after first paint Reset the demo book restores in one action Isolation a visitor cannot touch real records
